http://www.lazygranch.com/sound/shortwave/4814usb.wav

I recorded this from the SF Bay area in usb. It looks like bursts of
5Khz modulated at 500hz, then of course gated to wait for an echo.

BTW, I think this is codar.

Bruce,

All the above that you state is right on the money. No one should ever begrudge an indigenous people their chance to eke out a living on extremely limited resources (such as with the Inuit). It's the commercial whalers or thugs that slaughter rhinos and elephants for horns and tusks that p*sses me off to no end. Humanity has killed off enough species on this planet and sooner or later such extinctions will come back to haunt us.

Sounds about right for late-night raids by US soldiers on innocent civilians in
Iraq.

Greetings John! Thanks for all the good info and the great website. I thought it might be Armed Forces Radio, but with that strong of a digital signal I was doubting myself. I have listened to the Guam site in the evenings before with a good signal. I do have a gray line map on the computer so I will consult it as well. I very much appreciate the time you took to answer my questions and appreciate you taking me seriously. You can't learn without asking questions. Have a great week! Jon in South Carolina.

It'll fail under its own gargantuan weight, it can't sustain itself.
This is already happening.

"A democracy cannot exist as a permanent form of government. It can only
exist until the voters discover that they can vote themselves largesse from
the public treasury. From that moment on, the majority always votes for the
candidates promising the most benefits from the public treasury, with the
result that a democracy always collapses over loose fiscal policy, always
followed by a dictatorship.

"The average age of the world's greatest civilizations has been two hundred
years. These nations have progressed through this sequence:
From bondage to spiritual faith;

from spiritual faith to great courage;
from courage to liberty;
from liberty to abundance;
from abundance to complacency;
from complacency to apathy;
from apathy to dependence;
from dependence back again into bondage."

Penned by Professor Alexander Tyler over 200 years ago while we were still a British Colony.

Its called *projection*.
It realizes it is retarded, so it calls everyone else a 'tard.
It really can't do anything else.
Pitty it, then kick it in the ass.

We know what he said, Greg. RHF even quoted it. You can read it above.
He came right out and said that young American soldiers are terrorizing
"kids and children, you know, women". Then, as you say, he flipflopped
and said that the Iraqis should be doing the terrorizing instead.

All of it is a non issue.
The US politicians should not have been involved in all of that in the 1st
place.
The best it can do at this point is to get out immediately.
The purpose of the US military is to protect the US and it can't do that
while it is being systematically dessimated in distant lands.

> from me a few weeks ago. with a few hours to go it is already $62 above
what
> I sold it for. He has NOT disclosed all of the problems or the truth
about
> how he got it

How do you know that it was not fixed in the intervening period
of weeks before you sold it and he allegedly bought it? (assuming
it is the same radio) What is so wrong may I ask if someone buys
a radio someplace and makes a profit on it later? This is called
Capitolism last I checked Mike. So he's making $62 above what
you allegedly sold it for. Big frigging deal!

5 years ago I purchased a 1970 Dodge Charger for $2200.
Car needed a complete off-frame restoration as it sat in a
barn in Nebraska from 1983. Two years later and $12K
invested it's now fully restored and was recently apprased
at $24,000 - not a bad investment in time and labor eh Mike?

Tell me what's the difference if I bought a broken down radio someplace
and re-sold it for 4 times what I paid for it? Sounds good to me
and if you disagree then you can go cry about sour grapes till doomsday
for all I care......

> He also bought a Sany 8880 portable with 2 HOLES in the side and
immediately
> re-listed it but DID NOT disclose the holes !

How do you know it's the same radio? If it is the same then
what is your issue with it? You are not selling it nor are you
bidding on it. Why expend so much energy on this?

Forget it and move on and I hope you find a better deal someplace someday.

I myself found a National NCX-5 with the matching Speaker/PS at
a yard sale this past summer. Got it for $35.00 I guess some myopic
hams may be mad if I sold it on e-Bay someday for $350 eh?

Jeeze........hams are such a bunch of tightwads that
are wound up tighter than a garter snake's arsehole..... ;)

Yes with a Kp 5 at the time.

I noticed some echoing and momentary drop outs on some stations and the
upper bands (17 MHz) got noisy. Lower bands 5 MHz and 6 MHz were better
and were not noisier than usual.

No, it wouldn't. We won't do that, because it's not what Republicans
want, it's what you'd like to ascribe to Republican desires.

And by the way, changing everything to black-and-white and going for the
wrong choice only works in spoken talking points, and then only if you're
fast enough to confuse your listener into forgetting you did it. In
writing, it's really easy to see and it doesn't work well.

Source record: 54067

Joeb: The 1101 is a fine radio. It is more portable than the 1103
and is much easier to use. I didn't mention that scanning on my 1103
works poorly. The scan skates by most signals that are quite
listenable.
When I go for long walks along the beach I often carry the 1101.
With its push buttons and very good scanning circuit it is very easy
to retune. The 1103 would be a pain in that department as well as
not fitting so well in the hand.
Bob

you sir, are a moron

he did NOT disclose that the analog display does not work
he LIED about the history of the radio. do I need to go on ?

what do mean he fixed it ? he says it is broke ! he never sold it and had
it returned, he bought it from me !

if someone sold you a katrina flooded car and LIED about it would you be
upset ?

well that is what radio-mart does all the time

get a clue people... some of you on this group are incredibly stupid... I
have been trying to tell you that....

the guy LIES and CHEATS people, simple as that

although that is quite a serious issue

Everytime I hear a whine about how this poor country is anti-Christian, it comes from a Republican. As if they are the only fucking Christians in the fucking country. Like you've got some fucking lock on all things righteous. Well you don't.

Yeah, painting anyone who disagrees with you as bing anti-Christian is a great talking point, isn't it? Or anti-American, or a traitor or a Communist.

For One and All,

24 kHz Ferrite Loop Antenna Solar Flare Monitor
http://cgi.ebay.com/_W0QQitemZ5841124651
The Ferrite Loop Antenna is Resonant a 24 KHz
the Frequency of the Cutler, Maine RTTY Station.

The PVC Pipe (Tube) that house's the Ferrite Rod
Antenna is over 24 Inches Long. Check-Out the
Seven (7) Nice Photo's of the Ferrite Loop Antenna.

Use the Loop to Monitor Very Low Frequency Radio
Transmissions and Sudden Ionospheric Disturbances.

Note - The Cutler, Maine RTTY Station is used by
many people and organizations to monitor the stability
of the earth magnetic field, and how it is affected by
solar activity.

FOLLOW-UPS :

1 . AM/MW/BCB Loop Antenna
for DX MW LF VLF *No Tuning* - by W1VLF
http://cgi.ebay.com/_W0QQitemZ5835229011
This Auction ended with a Price of $144

OBTW - A Second design prototype of this AM/MW
BCB Loop Antenna with some improvements is
being offered on eBay :
http://cgi.ebay.com/_W0QQitemZ5841124634

2 . WWVB 60 kHZ Ferrite Loop Active Antenna - by W1VLF
http://cgi.ebay.com/_W0QQitemZ5837399066
This Auction ended with a Price of $129

CHECK-OUT THE DESIGNS - GET INSPIRED :
Hope the Text and Pictures may inspire you to try
your own special Home-Brewed Loop Antrenna; or
other Shortwave Listening Do-It-Yourself Project :o)

NOTICE - These are NOT my eBay Auctions and

I once bought an Elvis Presley notebook for a lady friend in England.A guy by the name of Robert in Hamilton,Ohio had them for sale for $4.50 each.It wasn't exactly like a bid auction thingy. (he had them for sale on eBay) He had included his name and snail mail address and his email address.If I see something on eBay I am interested in buying and if the seller at least includes his or her email address so I can get in touch via email,I will email the seller about whatever item or items.I have been to two auctions before here in the Jackson area.At one of the auctions,I bought a big bench Sears Craftsman metal lathe ($350.00) and a big metal cutting bandsaw. ($40.00) I can't see why those sellers at eBay dont at least include their email addresses.Is there any paticular reason they dont? By the way,if y'all see junkinjudy at eBay,she lives here in Jackson,Mississippi.

Like so many of you folks, I found the steady roar of Russian shortwave radio jammers to be fascinating in spite of their inconvenience. When I tuned through the bands on my uncle's old Zenith multiband radio back in the day, I thought they were airplanes.

Where in Russia (or elsewhere) did these jammers broadcast from?

What did they use to create that roaring buzzsaw sound?

How many other countries did it?

How effective were they?

FDR - Question : Did I Say Any Of That ? - Answer "NO [.]"
[FDR - Please Pay Attention In The Future . . .
So That 'you' Do Not Confuse 'yourself'. :<]

FDR - Nice Anti-Christian Rant - It makes me 'feel' so safe
knowing that 'you' are going to Defend the US Constitution
by Trampling over my Religious Freedoms; and my ability to
participate in our Society and Public Life as a Person-of-Faith.

FDR - All that you have written about may be on 'your' personal
agenda to do it to the Christians before they do it to 'you'.
But the vast majority of everyday persons-of-faith who work,
live and love. Simply want to be able to be persons-of-faith
and go about their daily lives living out their family cultural
and social traditions : Without FEELING that they are being
held under siege by a Society that is trying to Eradicate
Their Faith and make Their Own Personal Faith a Crime.

Back-to-the-Beginning-of-this-Thread :
DaviD - Took a simple news article about a Corrupt Politician
who happened to be a Republican and tried to turn it into
a 'slanted' Hit Piece on "Faith Based". "Faith Based" has
become the new Liberal Democrat Code Word for 'Christians'
that is in Fact a form of the Hate Speech being fostered by
the Left-Wing Media.

In My America {Under the US Constitution} :
* Republicans can be or not be Christians or any other
Faith or non-faith.
* Democrats can be or not be Christians or any other
Faith or non-faith.
* Christians or any other Faith or non-faith can be or not be
Republicans, Democrats, Independences or disassociated
from any political party.
* Conservatives, Liberals and/or Moderates you can be or
not be Christians or any other Faith or non-faith.
* Christians or any other Faith or non-faith can be
or not be a Conservatives, Liberals and/or Moderates.

Of Equal Importance In My America
{Under the US Constitution} :
* Citizens {Persons} be they Christians or any other Faith
or non-faith should not be made to feel like second class Citizens

or even worse Criminals by any Political Party or the Media.
* All Citizens should have Equal Standing in the Cultural, Political,
Social and Economic Life of this Great Nation.

Being an American Does Not Limit Your Freedoms :
Being an American Expands Your Personal Freedoms [.]

Sorry, no direct answers to you, but would just here mention a book called "Jamming" written by Lithuanian Rimantas Pleikys about 10 years ago. I have read it many years ago and can recommend it to anyone interested in this topic. Here is a link: http://www.zilionis.com/jamming/jamminge.htm.

The Democrats have the Democratic Religion. Christianity is false
religion to them. Their god is power, their pope is the President,
and they're up in arms because the President isn't of the One True
Faith right now.

That's why you only hear anti-Christian complaints from Republicans.

Hmm, I read FDR's response and did not at all feel he advocated the abridgement of people's rights to practice their religion and I've been a Republican since when I first voted and have always been a person of faith. What I did perceive was a strong sentiment toward us being a secular nation - and in a secular nation (at least in a free secular nation) folks have the ability to practice the religion of their choice and I do not recall ever seeing FDR post that folks should not be allowed to practice their religion of choice.

It's made up out of whole cloth. The first thing it says is that there
is a lack of experimental data. Then they say they *estimate* levels
"typical" "over a wide range of scenarios" (whatever the hell that
contradictory mess means). Then they use their *estimates* to "assess"
health risks. It's all guesses and inventions, and they have no
compunctions about saying so.

Nowhere does it say how people are getting exposed to this stuff. I say
again, how does the DU get from the bullet deep in the sand of Iraq
to the innards of humans?

2007. (OT) : DXSAV Says - we are a 'secular nation'

Newsgroup: rec.radio.shortwave
Date: 2005-12-12 10:50:40 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1134384640.142488.249680@o13g2000cwo.googlegroups.com>
Source record: 54018

DXSAV Says - we are a 'secular nation'

DXSAV - May I Respectfully Ask :
What Nation Did You Grow Up In ?

The Nation : 'This America' is "The Americans" {The People}

1. Separation of Church and State :
* Where the State does not dictate to the Church
and the Church does not Dictate to the State.
* Both Abide Equally and Separately {Together}
within the Fabric of the Individual Liberty of the People.
* Church and State are neither Exclusive nor Inclusive :
* The Unity/Apartness of Both Exists within the People
as Individuals as a Right and Expression of Free Will by
Each and Every Citizen.

2. The State as a Government :
* Reflects the Character of the People and Exists with the
Support of the People to do the Will of the People for the People.
* The State {Government} unto itself may in-fact be 'secular'
or at least as 'secular' as every member of the Government
exercising their Individual Liberties chooses to be or not to be.
Example - The Postman may say Merry Christmas as a
Traditional Greeting and Expression of Good will if 'he' as
an Individual so chooses to do so. [The Greeting is neither
Prescribed by the Government nor Prohibited by same.]

3. The Nation is the People - Not the Government [.]
* It is the People Who as Individuals make the Choice to be
'secular' in their daily life or Persons-of-Faith in their daily life.

* The vast majority of Americans express some affinity for the
Christian Religion and many Claim to be Christians.
* This is born out of a National Identity deeply rooted in the
History of Our Nation and the Culture and the Traditions of
the People of the Nation. It Is "We The People" Who Are
'The Nation' [.]

4. The American Way : Respect of Ourselves and Others.
It is part of the American Way to Assert Our Own Rights
and to Equally Respect the Rights of Our Fellow Citizens.
There can be No Individual Rights - If the Individual Rights
of Another are Being Deigned.
Example - If you sneeze and I say "God Bless You"
Choose to Hear It and Reply with a "Thank You" -or-

Choose to not hear it and simply go on with your life.
But Please Don't Tell Me That I Have No Right To Say It :
Because when you do - You Have Abridged My Individual
Freedoms and My Right "To Be Me" {My Life, Liberty and
Pursuit of Happiness}

As For Me - I Happy and Humbly Choose To Say as
an Expression of My Individual Liberty and Freedom :
God {Allah} Bless America and Every American - Amen ~ RHF
.
.

2008. The In-the-Attic Horizontal [Flat] Loop Antenna - Just may be the better choice to fill the available space.

Newsgroup: rec.radio.shortwave
Date: 2005-12-12 11:20:40 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1134386440.286619.153800@g14g2000cwa.googlegroups.com>
Source record: 54019

SED,

You bring up an interesting point, about using the existing
"Available Space" i.e. THE-ATTIC and the three Antennas
that are often time mentioned :

1. The simple Random Wire (Longwire) Antenna run between any
two far-points in the Attic : With a 'limited' Signal Capture Area
{Aperture} along the longitudinal lay of the Wire Antenna Element.
[A Wire within single plane of existence having one axis.]

2. The basic Dipole Antenna run between the same two far-points
in the Attic : Again with a 'limited' Signal Capture Area {Aperture}
along the longitudinal lay of the two adjacent Wire Antenna Elements.
[Two Wires within single plane of existence having one axis.]

3. The common Horizontal [Flat] Loop Antenna run between any
four-or-more far-points (corners) in the Attic : With a 'expanded'
Signal Capture Area {Aperture} between the parallel lays of the
Wire Antenna Elements : Front-to-Back and Side-to-Side.
[A Wire Folded within single plane of existence having two sets
of perpendicular axis's each composed of two parallel elements
separated by a significant amount of space.]

Conclusion - Having stated the three above sets of parameters
for the above three types / shapes of Antennas that are often
used as In-the-Attic Antenna : It now becomes apparent to me
that the Loop Antenna is the better choice with a potential for :
* Higher Signal Levels due to the fact for the available space
there is simply more Wire in the Air.
* Equally as low Noise due to the natural properties of a Loop.
* Greater Antenna Aperture {Signal Capture Area} due to the
natural shape and size of a Loop in any given space; with less
apparent signal fading.

Going One Step Farther : A Vertical [Tall] Loop Antenna
In-the-Attic could offer almost as many advantages over the
Random Wire Antenna and Dipole Antenna; as does the
Horizontal [Flat] Loop Antenna. A Vertical [Tall] Loop
Antenna can like the Horizontal Loop Antenna add all the
things a Horizontal Loop Antenna can except in the Vertical
Dimension. The Vertical Loop Antenna may take other forms
then the common Square or low-aspect-ratio Rectangle that is
associated with the Horizontal Loop. The Vertical Loop may be
a Triangle or Delta Loop or a Rectangle with high-aspect-ratio

being many times longer then it is high. Intuitively I would
think that for a Vertical Loop Antenna to perform up to its
potential the maximum Length-to-Height (Aspect) Ratio
would be about 4:1 or 5:1 .
Note - Horizontal Squares being 1:1 and Horizontal Rectangles
being in the range of 1:1.5 to 1:3 .

hope this helps - iane ~ RHF

Hello:

Lots of good info on loops from posts. Thanks all.

Just want to be sure re this:

When you talk about a Horiz Loop, you mean a true loop where the end is connected back to the beginning.

Right ?

(not just a folded random length config with a free end)

Any possible advantages in not connecting it back ?
(Interested in broadband, omni coverage)

Thanks,
Bob

I live everyday feeling like my Catholic values aren't being held under siege. I'm sorry if the "Christians" have this paranoid feeling of being under attack. There's plenty of ways for them to express their religious ways. Maybe if they spent theire time doing God's work instead of feeling persecuted they would be better off.

RHF,
I grew up in America. It is secular in that the government is not a religious institution. There is no law against you saying "God Bless You" even if it is in general and not in relation to a sneeze and I would not deny you your right to say it. I do believe you are reading things into my previous response that were not there for if you believe as outlined above you are arguing about our agreement.

Get a grip.

A 1 wavelength loop has a pattern nearly identical to a half wave dipole-
i.e. figure 8, slightly less gain than the dipole, and narrower bandwidth.

At other lengths, the loop, like a center fed wire, will devleop multiple
nulls. Of course, like the dipole at low heights, the nulls tend to fill in.

IMHO, I fail to understand the fascination with the loop configuration. If
it is a "quieter" antenna than a dipole (and I can see no reason for this
other than the idea that it is a DC short) then a dipole could be made
equally quiet by placing a suitable choke across the center insulator.

Take off angle is identical to a dipole at the same height.

(insufferable twaddle excised)

CHAPTER IV - OF THE BASES OF CHRISTIANITY.
IT is upon this plain narrative of facts, together with another case I am going to mention, that the Christian mythologists, calling themselves the Christian Church, have erected their fable, which for absurdity and extravagance is not exceeded by anything that is to be found in the mythology of the ancients.

The ancient mythologists tell us that the race of Giants made war against Jupiter, and that one of them threw a hundred rocks against him at one throw; that Jupiter defeated him with thunder, and confined him afterwards under Mount Etna; and that every time the Giant turns himself, Mount Etna belches fire. It is here easy to see that the circumstance of the mountain, that of its being a volcano, suggested the idea of the fable; and that the fable is made to fit and wind itself up with that circumstance.

The Christian mythologists tell that their Satan made war against the Almighty, who defeated him, and confined him afterwards, not under a mountain, but in a pit. It is here easy to see that the first fable suggested the idea of the second; for the fable of Jupiter and the Giants was told many hundred years before that of Satan.

Thus far the ancient and the Christian mythologists differ very little from each other. But the latter have contrived to carry the matter much farther. They have contrived to connect the fabulous part of the story of Jesus Christ with the fable originating from Mount Etna; and, in order to make all the parts of the story tie together, they have taken to their aid the traditions of the Jews; for the Christian mythology is made up partly from the ancient mythology, and partly from the Jewish traditions.

The Christian mythologists, after having confined Satan in a pit, were obliged to let him out again to bring on the sequel of the fable. He is then introduced into the garden of Eden in the shape of a snake, or a serpent, and in that shape he enters into familiar conversation with Eve, who is no ways surprised to hear a snake talk; and the issue of this tete-a-tate is, that he persuades her to eat an apple, and the eating of that apple damns all mankind.

After giving Satan this triumph over the whole creation, one would have supposed that the church mythologists would have been kind enough

to send him back again to the pit, or, if they had not done this, that they would have put a mountain upon him, (for they say that their faith can remove a mountain) or have put him under a mountain, as the former mythologists had done, to prevent his getting again among the women, and doing more mischief. But instead of this, they leave him at large, without even obliging him to give his parole. The secret of which is, that they could not do without him; and after being at the trouble of making him, they bribed him to stay. They promised him ALL the Jews, ALL the Turks by anticipation, nine-tenths of the world beside, and Mahomet into the bargain. After this, who can doubt the bountifulness of the Christian Mythology?

Having thus made an insurrection and a battle in heaven, in which none of the combatants could be either killed or wounded --put Satan into the pit--let him out again--given him a triumph over the whole creation--damned all mankind by the eating of an apple, there Christian mythologists bring the two ends of their fable together. They represent this virtuous and amiable man, Jesus Christ, to be at once both God and man, and also the Son of God, celestially begotten, on purpose to be sacrificed, because they say that Eve in her longing [NOTE: The French work has: "yielding to an unrestrained appetite.--Editor.] had eaten an apple

The loops respond to the magnetic portion of the wave, while most noise
is electrical.

In most loop applications, they are much shorter than a wavelength. At
least for shortwave.

Yeah, Codar seems likely.
I've put some plots from your recording at alt.binaries.alt.
There are some good echos there.
0.02 seconds corresponds to 6000 km.
I think you will find that the signal is sweeping
down from 4820 to 4790 over about 0.5 seconds,
repeating every second.
It is audible when it passes through the passband
of the receiver.

Source record: 54203

I have just received the following message from a BBC producer. Can anyone shed any light on this mystery?
Many thanks.

Simon Mason
http://www.simonmason.karoo.net

While speaking to an ex-WWII soldier, he mentioned to me that during Morse Code training he would occasionally retune his radio, and would often come across 'Clair de Lune' being played repetitively, at five minute intervals. He's certain it was some kind of signal, and has often tried to find out if this was the case.
As it would make an interesting story for my programme I've been doing some research into this - but to no avail. I've been onto Bletchley Park, and the Royal Signals Museum, and across to France and the Signals' British Liaision Officer there, but nothing has come up.

I wonder if you happen to know anything about this? Apart from anything else it would be lovely to be able to report some news back to my contact

Insane, perhaps. Mistaken, most definetily. NTSB concluded it was an
explosion in the middle fuel tank. Of course the tinfoil hat crowd has other
sites with the real "facts".

Hi all
Well, I am starting to build up my collection of radios thanks to the help
of you guys on here, so far I have got the Sony 2010, Sony7600gr, Sony7600D
and the tecsun PL-230 all of which I am very pleased.
Now I have my eye on a Degan 1103, I have the chance of it at a knock down
price of £20.00pUK Pounds, thats (€35.52USD)

What are they really like,

I have read some conflicting reviews on them and thought the best place to
ask is here on the newsgroup.
regards
Roger

Ignoring the potential for running into unhappy customers, a ham flea market would seem to be a horrible place for him to sell.

With ebay, he controls what you see. In person, you could move that manual or power cord to notice the scratch or missing screw it's covering. You might notice if the tuning knob binds.

If power is available, folks could fire them up.

On a more positive note, Radio Mart reached a milestone last week - his 100th negative feedback.

Oh, and for folks who'd care to stick up for Martyn, why is it he accepts Paypal, but his auctions aren't covered by the Paypal buyer protection plan?

I noticed he had a Drake 2C up for sale a bit ago loaded with mods, however he stated it didn't have the noise blanker, which I thought odd since it had every other bell and whistle on it.

Now I see he has the NB up for sale. Hmmmmmmmmm...

I kinda figured he'd do that after I'd read the 2C advert.

If I were a liberal, I'd rant about majority rule about now. But no
one wants an official religion except the liberals, who want the
official religion to be atheism.

>> Their god is power,
>
> Oh, like the Republicans don't want power? What a load of bs.

But they don't hold it to be more important than God. The liberals
hold that power IS god.

>> their pope is the President,
>

I knew that. It just makes a handy reference point.

>> and they're up in arms because the President isn't of the One True
>> Faith right now.
>
> Yeah, it takes true faith to mislead the people about war.

On the contrary, it's because he is not of the One True Faith that
the liberals believe they've been misled. If the President was a
Democrat, the liberals would be fighting to reinstate the draft to
make sure the war was adequately supplied with fighters. But then
we'd only be bombing aspirin factories, not chasing down terrorists.

Interesting. Is there a canned program to take an autocorrelation of a wav file? I noticed the signal was wide, so I used the 9.5Khz filter, though clearly that isn't enough if the signal is 30Khz wide. BTW, it has an interesting sound with FM demod.

I suppose if I had the ability to digitize at a higher bandwidth, I could sample my 455Khz IF output and get the whole sweep. I did move the VCO around a bit and couldn't find a center of the signal.

I've been looking at various high speed digitizers for use as a pan-adapter. This is the most interesting of the bunch:

Cuhulin - You are Right !

Yes there is a difference between what the Liberal Media portrays as American Torture of Terrorist who are our Armed Enemies in the War-on-Terror. The so called Torture that is done by the US is done to find out Information to Save Lives. Contrast this to the Islam-O-Fascist who use Public Executions and Live Video's of Beheadings as an In-Your-Face Acts-of-Terror against Innocent Civilians who have no Information of any Military Value; but who are Killed as a Terror Propaganda Tool.

The Islam-O-Fascist Kill as an Instrument of Terror and the Liberal Media covers this up by saying that the Pictures of the Beheadings are Too Graphic and Horrific to be shown on TV. In reality the US Media is Failing the US Public as an Instrument of Truth by not showing these Videos. Every TV Station should be showing these All-to-Real Video Images Every Hour On-the-Hour with the Message that It Can Happen Here and that is Why We Are Fighting the War-on-Terror 'over-there' so that these Crimes Against Humanity Won't Be Happening Here. The all to real fact is that the Islam-O-Fascist want to do their Killing and Terrorizing of every Human Being in this World until Everyone is either Muslim or Dead.

The Message for Every American Citizen Who Believes in the Promise of America and Our Individual Freedoms is clear . . . Americans - You Can Live Free of the Islam-O-Fascist or Die [.]

I just noticed the Sony ICF-SW7600GR at Amazon for $129.15 shipped, so I got one.

A couple years ago (?) I bought one when, I believe, the model was first released (or was at least in high demand) for ~$200 shipped. I had to let go of same about 4 months later when my schedule didn't allow for much listening time, thus I couldn't justify keeping two C-notes in a SW portable. Still in demand, I got only $10 less than I paid for it as I recall.

Still not a lot of time, but what a good delivered price. I guess I've also heard that Sony is getting out of the SW market. Too bad, but that may explain the deal a bit too, eh? Maybe a guy should grab a couple more...? ;-)

This almost sounds like a spy station, if you're implying that they played Claire de Lune continuously and restarted it every five minutes. That might be used as an easy way for the spy to find his station for the time when his next encrypted message came through.

Then again, years back there was a series of frequencies on which someone would continuously broadcast something called "Kiss Me Honey" or "Honey Honey" (depending on which electronics magazine you read). That's all they did. I also remember hearing a short ditty played on bagpipes that was repeated continuously on several frequencies; it was nine or ten seconds long, from memory. (I can still recall that tune if I try.)

Source record: 54235

Robert 11,

Just post here in response to your prior questions along
the same line about Loop Antennas.

READ - The In-the-Attic Horizontal [Flat] Loop Antenna
- Just may be the better choice to fill the available space.
http://groups.google.com/group/rec.radio.shortwave/msg/01f4e10e7df8249c?hl=en&

Intuitively {To My Way of Thinking} for an In-the-Attic Antenna
the Horizontal [Flat] Loop Antenna offers these Benefits :

1. Higher Signal Levels due to the fact for the available space
there is simply more Wire in the Air.

2 Equally as Low Noise Characteristics as a Dipole due to the
natural 'balanced' properties of a Loop and that it is a DC Short
for Static Bleed-Off.

3. Greater Antenna Aperture {Signal Capture Area} due to the
natural shape and size of a Loop in any given space; with less
apparent signal fading.

hope this helps - iane ~ RHF

Received a QSL today from Radio Hargeisa in the Republic of Somaliland (NASWA Country: Somali, Dem. Rep. - British) for reception on 29 November 2005 on 7530 kHz. V/s: Baldur Drobnica. Card states that they run 10 kw into a T-antenna.

Report was sent to their German postal address with $1. Card was mailed from USA with a cover letter and the $1 was returned via an amateur radio operator in Virginia. Apparently $1 is not enough for return postage from Germany and the v/s sent my card along with his amateur radio QSL and then the Virginia op forwarded my QSL.

My 217th NASWA Country verified.

Try to focus...

''FBI head acknowledges terrorist missile could have brought TWA jet
down
March 13, 1997
5.11 p.m. EST (2211 GMT)

NEW YORK (AP) -- The FBI agent in charge of the TWA Flight 800
investigation acknowledged for the first time Thursday that the plane
could have been brought down by a shoulder-fired terrorist missile.

But so far, there is no evidence to prove that theory, James Kallstrom
said. And he condemned as ridiculous a new flurry of claims that the
jet was destroyed accidentally by the U.S. military.

"This terrible, terrible tragedy was not caused by our military,''
Kallstrom said in an interview with The Associated Press. "Our
military, in particular the Navy divers, are the heroes of this
operation -- not the culprits.''

Investigators have focused on three possible explanations for the July
17 disaster: a bomb, a missile or mechanical failure.

Kallstrom said that it is "technically possible'' a terrorist using a
shoulder-fired, Stinger-type missile could have caused the tragedy,
and he said investigators are examining that possibility. He would not
elaborate on where a missile could have been fired from or provide
other specifics.

The plane was 10 miles offshore and more than 13,000 feet up at the
time.

Kallstrom said there is no new evidence to support the terrorist
missile scenario over other theories.

But he noted that similar missiles have been used to down more than 25 commercial planes over the past two decades in places such as Africa, the Middle East and the former Soviet Union. Stinger-type missiles are designed specifically to shoot down planes.

Flight 800 exploded after takeoff from Kennedy Airport, killing all 230 people on board and scattering wreckage across a five-mile stretch of the Atlantic Ocean.

The missile theory has been bolstered by people who reported seeing something in the sky before the disaster.

"There were too many people who describe strange events like flares and streaks of light in the sky'' to ignore the missile possibility, Kallstrom said.

Kallstrom's remarks came in a week rife with reports that a missile was responsible for the explosion. He was particularly incensed by claims by Pierre Salinger, a former ABC newsman and press secretary to President Kennedy, that the U.S. government is covering up the real cause of the blast.

"The outrageous claims of the Pierre Salingers of the world that are unfounded in any facts, absent any rational analysis ... do nothing to assist us in trying to find the answers to this horrific event,'' Kallstrom said.

Salinger offered an expanded version Thursday of his theory that a Navy missile shot down Flight 800. At a Paris news conference, he released a 69-page document and a set of radar images from a video.

The tape "completely confirms a missile fired down TWA 800,'' Salinger said.

Kallstrom said investigators long ago eliminated any "friendly fire'' scenarios or the possibility of a military cover-up. The FBI reviewed radar and other sources to conclude the military could not have shot down the plane, he said.

Bush claims to be one of those born-agains. But it's ok to mislead the public when you're born again, because you get to do an automatic do-over and become born again, again. Then you get to go to heaven again. Ain't that a sweet religon?

If the President was a
> Democrat, the liberals would be fighting to reinstate the draft to

I just received a letter from Germany the other day and the postage value on it is 155 which I'd guess is 1.55 Euro. So $2 would be more appropriate to use in the future I'd guess in most cases.

The cost of QSL'ing is going up!

Wow! You use them all Joe?!
I was going to do it from the Capitalist perspective, speculating that
I could off-load them after they're no longer available. But I
digress...

Have you ever tried the Degen DE31 active antenna? I had an AN-LP1
too but let it go about the time I did the radio. And the GR's
memories are non-volital as long as you get batteries changed in like
30 seconds, right?

Finally, to avoid that, what is the voltage requirement of the AC
adapter safely used with this radio. (And I know I only want to use
it for FM)

I reread the original post and am convinced the poster is referring to a
horizontal wire loop of large dimanesions- i.e. not fractional wavelength.
I personally have a homebrew 7' shielded loop with wideband preamp on a
short tower some 200' from my home- if the noise source is not in the near
field, these antennas have no noise advantage except in the null directions.

I don't know what he needs. Neither do you. But morons who try to convince others that Kerry was calling our soldiers terrorists need help.

Now, where did he flip-flop?

If you want flip-flop, here are some examples: We're going to war because of weapons of mass destruction. I mean, we are going to war to liberate the Iraqis.

"Clean Air Act" (lowering standards of clean air.)

"I don't believe in building." (Except after destroying Iraq.)

I could go on...

See, there is good torture and bad torture. Since we are the champions of human rights, individual liberty, justice, and are guided buy spiritual values, we only use torture for recreation. Since, as all the experts are saying, torture doesn't produce useful intel.

You know you're in deep bullshit when the message begins "Cuhulin - You are Right !"

It does matter. Get a 9 Volt battery. The ''Red'' wire is the one
that makes the cone move forward (toward you when facing the speaker)
when the wires are briefly connected to the + terminal on the battery.

The 1103 is a very good radio for the money. I would say its not quite up to par with the Sonys in overall performance. No sync detector, but only the 2010's is acceptable to me anyway. Very sensitive, almost to the point of overloading at times. Much more fun to scan the bands with the tuning knob than the Sonys. Not bad on SSB either. Good radio to add to the "collection" if you ask me.

Sorry, got so tied up wtih someone calling NPR commie, that I forgot to comment on your 1102 situation. I've had an 1102 for about a year, and the reception has been very good all around. It has since been put on the back burner by a Sangean Super 909, but I still use the 1102 daily as well. How is the reception with other stations? Keep in mind that when you plug in an external antenna you shut off the whip. I would say that if nothing else works, return it. It should pull that station in easily.

> (Interested in broadband, omni coverage)

The answer to the first question is no. If you connect the ends together you short the loop. The loop is a circular, triangular or square shape with one opening in it. At this opening in the loop you can directly connect coax cable lead-in to the radio so the coax is connected across the loop gap.

The answer to the second question is no. If you do not connect the other end to something then the loop is open and will behave as a random length of wire or a wire antenna. This will pick up signals and a lot of local noise. The loop connected across the coax will have lower signal levels and in general will pick up less local noise.

The loop wire routed horizontally will be fairly omnidirectional.

As in my above post, an omni horizontal loop is a rarity and occurs only
over a very narrow BW. Don't confuse the fact that the wire runs in 4
directions with making an omni. The resultant far field pattern is a
function of the vector currents in each wire- they add and cancel resulting
in patterns with a number of lobes and a number of nulls, but not omni.

I use Matlab. It is a general purpose math tool. A lot of
people use it to prototype DSP algorithms. There is
a student version for $150. It is good enough.
There is also an open source, free program called Octave
that tries to be compatible with Matlab. Matlab programs
can generally be ported to Octave with more or less work.

> I noticed the signal was wide, so I used the 9.5Khz filter,

Yeah, the IF is centered at 455 kHz and has a certain width.
30 kHz wouldn't surprise me.

> the VCO around a bit and couldn't find a center of the signal.

The center is half way between the top and the bottom. :)
It is a sweep. So it doesn't have a central carrier.

>
> I've been looking at various high speed digitizers for use as a

Now I am more confused than ever.So,I reckon that means I should remove the grill covers from the speakers (or the rear panels from the speakers,whichever is the easiest) and then what? Do I connect a 9 volt battery (I dont have a fresh or near fresh 9 volt battery here,they are all dead as a door nail,I do have an Eveready rechargable battery floatin around here somewhere,I reckon next time I go to the store,I will buy two 9 volt batteries for my two smoke alarm thingys) to the speaker wires and whichever wire(s) cause the speaker cones to move forward,to which connections on the back of the radio do I connect which wires?

If the loop is electrically small then it will receive in the plane of
the loop, which in this case is horizontal and so will receive
omnidirectional.

There is a program on channel 631 Turner South tv Radio about Nixon.Biography,Drama,Anthony Hopkins,Joan Allen,Powers Boothe.Insecurities haunt the 37th president (Anthony Hopkins) as he wins two terms,ends the Vietnam War and resigns in disgrace during Watergate.It comes on tv again tomorrow morning at 10:05 AM,but I wont watch it again,in fact,I am fixin to see whats on one of the two History tv channels right now.

In my opinion,all so-called prezs of U.S.A.now and in the future should Resign in Disgrace as soon as they are bought and paid for/"elected".U.S.govt,the best d..n govt money can buy.I watched an old,old Will Rogers movie on tv last night,Ambasador Bill is the title of the movie.Will Rogers was a cantankerous old coot.

If the speaker wire with the stripe on it,when touched to the positive post on a 9 volt battery and that causes the speaker cone to move forward,is that the wire that I would connect to the speaker wire connection with the red bush button? If it turns out to be the other wire that doesn't have a stripe on it that causes the speaker cone to move forward,then that is the wire I would connect to the connection with the red push button?

The discussion I see is about running a wire loop with further questions
about whether the far end is connected or left open-direct coax feed. Maybe
I missed something- these would appear to be simple wire loops- not
electrically small loops I would associate with a capacity tuned loop and/or
loop preamps.
Electrically small loops are traditionally mounted vertically so the user
can take advantage of the nulling properties to reduce a local noise source.

I guesstimated an inside loop around the ceiling of a 10 foot square
room for example. This would be electrically small on the lower bands.
I've done the same with fairly good results.

Hi Roger,

If you're wanting to make this purchase just for the sake of amassing a collection of portable shortwave radios, then go for it. If you're looking for some performance edge over what you've already got, then there's little reason to make this purchase.

Is there perhaps something that you might better put your money toward...I mean, something which might actually enable you to hear more with the receivers you currently have? (e.g. an AN-LP1 antenna for use with your radios? an MFJ 956 or 1046 to prevent overload if/when you hook your '2010 up to any potential outdoor antenna which you may have or plan to acquire?).

Of course, it's often fun to have a new radio to play around with, even if it offers you no real advantage over another you've already got.

Junius

You can get the speakers in phase just by using your ears if your hearing is ok. Hook up the speakers so that they are connected in the same way. Place the speakers so that they are about ten feet apart and place your head so that it is half-waybetween the two speakers. Tune in a music station or source and adjust the balance control so that the seakers are putting out equal sound. Move your head toward one speaker and back to the other one. If the speakers are in phase there will be a smooth transition of sound from left to right; if they are not, the sound will seem to jump from one speaker to another and you will feel a strange sensation in your head when the out-of-phase signals are opposing one another when you are exactly in the middle of the sound sources. Another clue lies in the bass response. When both speakers are pushing or pulling in phase, the bass response will be srong. When they are out of phase, the bass response will be noticeably weaker as one speaker sucks while the other blows. You will have to reverse one pair of speaker wires to see which hookup produces the correct sound.
Purists will insist that the speakers should be hooked up so that the positive pulse makes the speaker cone move forward, but in acual practice I have never found it to make any difference, as long as the cones nove in unison.

2164. Tecsun R-9012 review

Newsgroup: rec.radio.shortwave

I purchased and reviewed the Tecsun R-9012, a low-cost analog-tuned radio that receives AM, FM, and ten shortwave bands. It's quite similar to the Tecsun R-911 and Kaito WRX911 but with an updated casing and a tuning knob rather than a thumb wheel.

My review is posted on my weblog:
http://cobaltpet.blogspot.com/2005/12/tecsun-r-9012-review.html

Several pictures are also included.

Sometimes I wish those Prot. sects that want to be the Church of the United States (like the Church of England, Scotland, Norway, etc.) would get their wish! They'd soon be sorry. First, they'd discover that none of the familiar sins would disappear. Next, they'd start fighting over who's "really Christian," because they wouldn't want to share the money. Soon though, they'd find that government salaries for preachers, parochial schools, Jimmy Swaggart's outreach to the fallen women of Baton Rouge, etc., would mean government interference. In the end, when Hindu priests and Buddhist monks, Arapahoe medicine men and Eskimo shamans, Crowleyan sex magic priests, etc., started lining up at the slop chute for government money, they'd start crying again about how they are being persecuted, how their tax money shouldn't go to these heathens, etc., etc., ad infinitum.

Hmmh, 200ft from my house would be in my neighbor's neighbor's yard. If
you live in an urban environment, you appreciate the low noise. I have
at least two street lights within 200ft, and probably 4 if I bothered
to research it. Those buggers are really noisy.

When I finally gave up the long wire, it was after using a seriously
long wire (about 100ft) in a very remote area, and compared it to 40ft
on the Wellbrook ALA100. The Wellbrook kicked ass every time. I've
been fiddling with multiple turns with the ALA100, and finally have
some local BCB stations forcing the atennuator to turn on.

Star Choice in Canada has just added Turner Classic Movies to its lineup. All the great MGM and Columbia movies all with no commercials or interruptions. Even silent movies from the 20s and lesser known ones from the 30s and 40s. It lets me see the movies of the period that I missed because I was busy doing other stuff. It is interesting to see the technology of the times that was used in the making of a movies as well as the values and customs of the period. For example, in Pillow Talk with Doris Day and Rock Hudson, the main theme of the story was how the 30-year-old Doris protected her virginity from the lecherous Rock Hudson. (We all know now she had nothing to fear) . The kids of today have no idea what the plot is about, since the concept is unknown to them and the movie doesnt make much sense. Hollwood tends to remake old movies for each generation: sometimes the remakes are good but often they are inferior to the original. For example. there are three versions of State Fair and the 1945 version with Jeanne Crain and Dick Haymes is the most charming. the 1933 version with Will Rogers and Janet Gaynor the best tale of life in the 30s, and the 1962 versio with Pat Boone and Ann-Margaret was just awful. Having lived through much of these periods, I find it interesting to reflect on all the changes that have taken place in one lifetime and it helps me to not be stuck in the past clinging to obsolete mores, although I find the fact that the actors are nearly all dead to be a little discouraging. For Canadians with Star Choice, Turner Classics are free for this month: channel 539.

Of course the $1k price tag stops me from buying it too. There are
cheaper digitizers out there. However, look at a National Instruments
ADC card in that range and a grand sounds cheap.

In the dark ages before such items could be bought at all, we hooked up
an ADC with a few storage registers and a mux to feed the data in
parallel to a logic analyser, which in turn acted like the frame
buffer, then took the data off the logic analyser over the GPIB port.

http://www.octave.org/
I'll give this a shot.

2171. Re: The In-the-Attic Horizontal [Flat] Loop Antenna - Just may be the better choice to fill the available space.

Newsgroup: rec.radio.shortwave
Date: 2005-12-13 11:36:11 UTC
From: nm5k@wt.net
Message-ID: <1134473771.262852.104560@g44g2000cwa.googlegroups.com>
Source record: 54131

Conclusion - Having stated the three above sets of parameters
for the above three types / shapes of Antennas that are often
used as In-the-Attic Antenna : It now becomes apparent to me
that the Loop Antenna is the better choice with a potential for :
* Higher Signal Levels due to the fact for the available space
>there is simply more Wire in the Air.....

This can vary though. Would depend on the bands used, etc..
Just having more wire in the air doesn't mean much in itself.
It's quite possible and common for a smaller footprint antenna
to trounce the larger one. IE: my coax fed dipoles have a total
of 440 ft of wire in the air. Yes, it works well on any HF band,
but my yagi would eat it for lunch on the bands the yagi is designed
for. And the yagi uses a total of appx 90 ft of element/s to do it.

>* Equally as low Noise due to the natural properties of a Loop.

And what would these properties be? The only "noise" property a
loop has that differs from any other wire antenna is the reduction
of corona, or static buildup, etc. And only in locations where that
could help, would it be any advantage. Here in Houston, it would
mean nada. At HCJB, with the large amounts of element eating
corona up in those high mountains, it can help. Other than that,
the loops behave no different than any other antenna.

>* Greater Antenna Aperture {Signal Capture Area} due to the
natural shape and size of a Loop in any given space; with less
apparent signal fading.

This means little in general.. I can run a full wave loop on 80m
for NVIS, and compare it to a dipole, and they are almost exactly
the same in the real world. If you model a 80 dipole at 40 ft and
compare it with a 80 horizontal loop at 40 ft, the loop has the small
advantage of 1 db. In the real world, this is basically unnoticable
on HF. It's not the aperture you would want to worry about.
It would be the pattern of the antenna on the various bands, vs
whatever you would compare it to. This can easily be modeled.

>Going One Step Farther : A Vertical [Tall] Loop Antenna
In-the-Attic could offer almost as many advantages over the
Random Wire Antenna and Dipole Antenna; as does the
Horizontal [Flat] Loop Antenna.

You say? What would these advantages be? Have you tried modeling
it? You might be surprised...

A full wave loop has no advantage over a dipole, except in differences
in
pattern. They are both about equally efficient.
What would that mean? On some bands, the dipole could be better.
On others, the loop... Basically, it's a crap shoot.
Here, I have enough room to run either full wave loops, or dipoles.
I run the dipoles. Why? Same appx performance, with less work
involved. On the higher bands, I'd generally prefer the dipoles, vs
a horizontal loop due to current distribution concerns.
Vertical loop vs dipole? About 2 db or so, and barely worth the
trouble.
I'd rather run an extended double zepp, vs the vertical fed loop.
Has about 1 db more gain on it's design freq.

Intuitively I would
think that for a Vertical Loop Antenna to perform up to its
potential the maximum Length-to-Height (Aspect) Ratio
>would be about 4:1 or 5:1 .

Nope. The maximum performing loop is a perfect circle.
A square would be better than a tall narrow loop. Whatever
covers the largest area is best as far as gain.
If you want horizontal, you feed at the top or bottom.
Vertical, from either side.. A loop is a loop no matter
the orientation. Same properties will apply to both.

Anyway, there is no real advantage to a loop vs dipole, unless
the pattern of the loop is more favorable for a certain
band and direction, etc, in use at the time. This will vary.
As far as s/n ratio, you could run either one with little or no
difference on most the bands, assuming both are properly
decoupled from the feedline..

Source record: 54132

A 1 wavelength loop has a pattern nearly identical to a half wave
dipole-
i.e. figure 8, slightly less gain than the dipole, and narrower
bandwidth.

At other lengths, the loop, like a center fed wire, will devleop
multiple
nulls. Of course, like the dipole at low heights, the nulls tend to
fill in.

IMHO, I fail to understand the fascination with the loop configuration.
If
it is a "quieter" antenna than a dipole (and I can see no reason for
this
other than the idea that it is a DC short) then a dipole could be made
equally quiet by placing a suitable choke across the center insulator.

Take off angle is identical to a dipole at the same height.
Dale W4OP
.....

I fully agree...Note the post I just made, before I read this one..
And a loop is most certainly *not* a quieter antenna than a dipole,
except in cases of corona problems. If there is no corona, or
static buildup, there is no advantage at all. And you would need to be

in the mountains like HCJB to really see the advantage. It was the
corona
problems at HCJB which led to the use of the loops at that station.
Had nothing to do with the antenna performance in itself.
Like I've said, RHF is an enthuthiastic sort, but he comes up
with some hokey ideas about antenna theory at times.
RHF, you need to invest in some good antenna books. IE: ARRL antenna
handbook, etc.. Your "intuition" is leading you astray...:(

Hmmh, 200ft from my house would be in my neighbor's neighbor's yard. If
you live in an urban environment, you appreciate the low noise. I have
at least two street lights within 200ft, and probably 4 if I bothered
to research it. Those buggers are really noisy.....................

Changing antenna types will not reduce the pickup of that noise,
unless there are nulls in those directions.

When I finally gave up the long wire, it was after using a seriously
long wire (about 100ft) in a very remote area, and compared it to 40ft
on the Wellbrook ALA100. The Wellbrook kicked ass every time. I've
been fiddling with multiple turns with the ALA100, and finally have
some local BCB stations forcing the atennuator to turn on.

Well sure...The small loop, "I assume that is what the wellbrook is",
has good nulls. You are comparing apples to grapefruit. Has nothing
to do with the *fictional* noise reducing qualities of the loops. Has
to
do with the nulls. If you have two wire antennas, and one is quieter
in a certain direction that another, it's the inferior antenna. Noise
is
RF, same as the desired signal you are trying to pick up. If you
reduce noise in a certain direction, you will also reduce the level
of any desired signals in that direction.

Yeah, thanks for posting the review..
I've bookmarked the page.. one more tab in the
Firefox Browser :-)

- Personally , after getting the Degen DE1105, I've just about given
up on small single reduction SW radios..

- However, in a pinch, they are still fun!

2176. Re: Hooking up Radio Speakers

Newsgroup: rec.radio.shortwave
Date: 2005-12-13 13:02:06 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1134478926.410502.235750@g43g2000cwa.googlegroups.com>
Source record: 54136

Cuhulin,

Be consistant and uniform in what your do with both Speakers.

Set the Pair of Speakers side-by-side with their backs toward you.

Examine the Speaker Terminals is One Red and the Other Black ?
- - - If So - Then That is Good :o)

Buy Some Speaker Wire (18 AWG Stranded) that has a
White Stripe or Raised Ridge along one of the Wires -or-
Separate the two Speaker Wires about 2"-3" and Stripe
Off about 1" of Insulation from each. You may notice that
One Wire is Silver Colored and the Other Wire is Copper
Colored.

Cut Two Equal Lengths of Wire long enough to go from
the planned location of the Speakers to the Radio/Stereo
Tip - Add about an Extra Three Feet to this Length so that
you can make some future relocations of the components
with out having to buy and cut new Speaker Wire.

Connect the White Stripe/Silver Wire to the Red Terminal
of each Speaker.

Connect the Plain/Copper Wire to the Black Terminal of
each Speaker.

Place the Speakers in their chosen locations.

Run the Speaker Wires to the Radio/Stereo.

Looking from the Front of the Radio/Stereo :

First - Connect the Left Speaker Wire with the White Stripe /
Silver Wire to the Left Red Terminal of the Radio/Stereo.

Second - Connect the Left Speaker Wire with the Plain/Copper
Wire to the Left Black Terminal of the Radio/Stereo.

Third - Connect the Right Speaker Wire with the White Stripe /
Silver Wire to the Right Red Terminal of the Radio/Stereo.

Fourth - Connect the Right Speaker Wire with the Plain/Copper
Wire to the Right Black Terminal of the Radio/Stereo.

Coil-Up the Extra Speaker Wire for each of the Speakers behind
the each of Speakers; not the Radio/Stereo. Make the Coils 4"-6"
Round and tie them off if you wish.

cuhulin - enjoy your new (to you) radio/stereo ~ RHF

I agree totally. The W8JI link is very revealing of what I see daily here. I continually compare my 7' shielded loop w/ BB preamp to my 140' dipole. Even on 160M where the dipole is highly reactive (thus incurring some additional feedline loss) the dipole beats the shielded loop almost 100% of the time. To its credit, the dipole is close to 150' above the lake, thus ensuring fairly low takeoff angles down to perhaps 3 MHz or so.

Where the loop comes into its own is below 500KHz- the deep nulls can be placed on a noisy transformer (?) across the lake and used to reduce that noise source. With that said, the 140' dipole would not be expected to perform well at LF.

RHF - I noticed you left out the word "Communist" this time while referring to liberals. Curious. However, words like "Left-Wing Political Activists", "liberal elites", and "liberal secularists" are terms of hate speech to encourage bigotry and bias against those who are opposed to Christian zealots running society, along with Wall Street and the energy giants. The real goal of these zealots and fat cats is to make being a non-Christian a crime. And it is convenient for these hypocrites to wrap themselves in the American flag, so that criticism of them can be characterized as "anti-American".

(Disclaimer: The above statements, while true in some cases, represent exaggerated generalizations, just like practically everything you write, with the exception of your valuable and relevant antenna info.)

BTW, the term "Faith Based" is a respectful term used by everyone from the president on down.

Are you nuts? 'Like John 'ff' Kerry saying "I was for the
War before I was Against the War."' is a classic Republican talking point.
The Dems aren't criticizing Kerry. Try to keep your warring sides straight.
You are a conservative Republican. It's your job to criticize everything
Kerry says. Ignore the fact that Kerry is among the people in Congress who
say they were mislead by Bush who withheld important intel info in his rush
to start a war. That's too much to put on your bumper sticker. So keep
hammering away on the fact that Kerry changed his position when he learned
the truth. His real mistake was trusting Bush.

RHF - Funny you should criticize Democrats for rigging elections! Even while Tom Delay is facing felony charges for money laundering in order to finance the Texas state Republicans' campaign which resulted in their gain of state legislative seats, in order to ram through redistricting which created seven new Republican legislative seats. Although Justice Department career lawyers ruled that the redistricting for political gain was illegal, political appointees in the Justice Department overruled them.

I'll bet you have a bumper sticker slogan to refute this?

Each one of the speakers already has about four or five feet of black speaker wires connected to the back of the speakers,the wires were on there when I bought the speakers at the Goodwill store.One of the wires on each speaker has a white stripe running the entire length of the wire.I guess when I get a good 9 volt battery,I will do it like Dave said and then I will check with my ears for listening quality like ve3iut says.I dont want to hook up the speakers and leave them that way if they are sucking and blowing.Stuck in the doorway,I remember an old Festival of Shorts program I once saw on tv.A department store basement sale and them wimmins were chuggin and tuggin on corsets and girdles and shoes that were oviously two or three sizes too small for them.

Can I have my God's holy icon on the Town Hall's lawn during my God's holy day? If I believe in Apollo or Zeus can I have them displayed in lights during their holy day?

>
> FDR - As an American - You Want a Place to Worship Your God ?
> Choose 'your' Own Place of Worship for God or not.

I thought that's why we had church.

Then again, at school could someone get a rug out and pray to Allah in the middle of the day in the middle of the hallway?

>
> FDR - As an American - You Want a Relationship with God ?
> Choose 'your' Own Level of Personal Relationship with God or not.

I have and it's really no one elses business. But apparently if you are Christian you have to make sure it's everyones business.

>
>
> fdr - yes in america - you-and-god is that simple ~ RHF

Fine. So why does creationism have to be taught in school?

Here in Jackson,Mississippi,Turner Classic Movies sure does have commercials in the movie programs,they have to make some money somehow or the other.Whether you subscribe to cable or satellite tv here in my area,those commercials are there,but that is ok.A few days ago,I watched a Little Annie Roonie movie on tv,it was a silent movie (I like them old silent movies) and if I remember,the movie dates back to the year 1925.I am thinking about buying myself a new flat screen CRT RCA tv Radio set,at least about a 27 inch screen size or larger.Seems to me the flat screen tv sets,the pictures on them in the stores do look better to me than the curved screen CRT tv sets.

Put a burning cigarette or some incense in front of the grille. If
the speaker has correct absolute phase, there'll be a puff away from
the speaker when you connect the wires to the 9 Volt correctly. The
wire going to the small button on the battery should then be connected
to the red terminal on the RCVR.

Good old Doris Day (such a sweetie pie she was) didn't have to worry to much about protecting her virginity (virginity,uh huh,,, sure) from Rock Hudson because I once read in a magazine about forty years ago that Rock Hudson was gay.I have an old Popular Science magazine somewhere around here (I am not neat and tidy,I admit the inside of my house looks like h.ll with so much dusty old junk) which dates back to the 1950's.Title of the article in that article is,Rock is ready to Ride.Rock Hudson had done bought a big new Horch convertible (Horch,spelling,Horch or Hortch?) German auto manufacturer,wayyyy back then) Automobile to "sport" around in.3:10 To Yuma movie is just now cranking up on my tv Radio set.

2203. Re: The In-the-Attic Horizontal [Flat] Loop Antenna - Just may be the better choice to fill the available space.

Newsgroup: rec.radio.shortwave
Date: 2005-12-13 16:57:07 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1134493027.501292.56410@z14g2000cwz.googlegroups.com>
Source record: 54262

MK - By Definition "In-the-Attic"

In-the-Attic = Limited Space and Antenna Size

In-the-Attic = Usually means that the Wire Antenna Element
is 12 Feet to 18 Feet High above AGL for a single story house.
Maybe twice that for a two story house or split-level condo.

NOTE - For a Shortwave Listener's (SWL) "Receive Only" Antenna
that is designed to "Fill" the Available Space : Whether these
Antennas are : a Random Wire; a Dipole, or a Loop they are
not "Cut' for any specific Wave Length and Frequency; they
are simply Random Wire Antennas

IN-THE-ATTIC AND ATTIC SIZE :

In a 30 Foot by 40 Foot size Attic a basic straight Random
Wire Antenna can be 30 Feet along the short side; 40 Feet
along a the long side; or 50 Feet across a the diagonal.

In a 30 Foot by 40 Foot size Attic a simple straight Wire
Dipole Antenna can be 30 Feet along the short side; 40 Feet
along a the long side; or 50 Feet across a the diagonal.

In a 30 Foot by 40 Foot size Attic a common Wire Loop
Antenna would be : 30 Feet along one short side; 40 Feet
along one the long side; 30 Feet along the other short side;
40 Feet along the other long side; for a total of 140 Feet
around the Attic [.]

MK - It should be self-evident that " there is simply more
Wire in the Air. " and that is all I said and meant to say.

RELATIVE ANTENNA NOISE :
" Equally as low Noise due to the natural properties of a Loop. "

The usual ascertion is that a Dipole Antenna has a Lower Noise
Factor (Property) then the same Length Random Wire at the
same Height; all other things being equal : Balun / No Balun;
Coax Cable / Twin Lead / Ladder Line; ETC.

The Horizontal [Flat] Loop Antenna has the same Lower Noise
Factor (Property) then the Dipole Antenna has in the same
relative Available "In-the-Attic" Space : All other things being equal
:
Balun / No Balun; Coax Cable / Twin Lead / Ladder Line; ETC.

There is Nothing to be gained or lost by using the Dipole or Loop
Antenna in the Attic Noise Wise : But with the Loop Antenna more
Wire is in the Air which can result in more Signal from the Antenna.

ANTENNA APERTURE :
RHF Said - " Greater Antenna Aperture {Signal Capture Area}
due to the natural shape and size of a Loop in any given space;
with less apparent signal fading. "

MK - You model two 80 Meter Band Antennas; a Half-Wave Dipole
Antenna and a Full-Wave Horizontal Loop Antenna and say that they
are the same with little measurable difference between the two. "OK"

Again here my beginning point is "In-the-Attic" were both the Dipole
Antenna and the Horizontal [Flat] Loop Antenna are using the same
Available Space and are in fact simply two 'random wire' antennas
that happen to be laid-out in the confines of the Attic. Here the 50
Foot long Dipole Antenna with lets say 50 Square Foot of Signal
Capture Area has less potential as an Antenna : Then the 140 Foot
long Horizontal [Flat] Loop Antenna with lets say 120 Square Foot
of Signal Capture Area that has more potential as an Antenna.
To my simple way of thinking relative size and area does matter.
? Now is this Theoretically or Machine Measurable - Most Likely.
? Now is this Discernable by the Shortwave Listener (SWL) - Maybe.

THE CRAP SHOOT :
MK you say : "Basically, it's a crap shoot." "I run the dipoles."
RHF says : For an In-the-Attic Antenna "Crap Shoot" I prefer
the Horizontal [Flat] Loop Antenna - It's a matter of choice.

MY INTUITIVE STATEMENT ABOUT VERTICAL LOOP ANTENNAS :
RHF Said - " Intuitively I would think that for a Vertical Loop Antenna

to perform up to its potential the maximum Length-to-Height (Aspect)
Ratio would be about 4:1 or 5:1 ."

Again here my beginning point is "In-the-Attic" most every Attics
that I have been in is Longer and Wider then they are High {Tall}.
So 'if' we are trying to Maximizing the Size of the Vertical Loop
Antenna then a simple Circle or Square would not produce as much
Wire Length and Combined Area as a Rectangle or Triangle using
up the Available Space inside the Attic. The added comment about
the Length-to-Height (Aspect) Ratio being about 4:1 or 5:1 was to
not have the Vertical Loop become to flat compressed and effectively
become a fat Folded Dipole Antenna of sorts.

RESTATING MY CONCLUSIONS {NON-TECHNICAL OPINIONS} :
For a "Receiver Only" Antenna being used by a Shortwave Listener (SWL)
The Horizontal [Flat] Loop Antenna used In-the-Attic may/could/should
perform better then the simple Dipole Antenna with potentially Higher
Signal Levels; the same relative Noise Level; and less apparent Fading.

STAYING ON MESSAGE - THIS CONVERSATION :
MK - You appear to be a "Technical Person" and that is well and good.

However, I am for the most part a non-technical person who simply tries

to Keep It Simple And Practical [KISAP]. For me these Conversations
can be an interesting exercise in restating my simple minded opinions :

But for you these Conversations may turn out to be an exercise in
futility
- a Fools Errant so to speak.

MK - Part of my 'iane' signature { I Ain't No Elmer }
Means : I Don't Get Techincal - Because - I simply am not smart
enough to try and WOW anyone with the all that math or science.

MK - I Am Glad We Had This Talk :o)

kisap - keeping it simple and practical ~ iane ~ RHF

I've used the DE1103 and have found that it catches as many if not more FM stations than the car radio. The reviews I've read indicate that FM performance on the 1102 is about the same as the 1103.

Because there may be some interference problem inside your house, try listening outside. I say this because an otherwise strong local FM news station can be completely obliterated by a bible pounder station when I listen inside the house.

For the price it offers performance and a list of features that is
unmatched by a radio from any other company. It is not perfect (no
radio is) because the memory management system is limited by a couple
of unfortunate choices made when it was designed. Still, the plusses
way outweigh the minuses imho.

K1MAN ESSAY - ES051212B -

Three Classes of Americans

1. Everybody else.

2. Yuppies

3. Wannabe Yuppies

All of life is governed by Jack Carlton's "Pecking Order Theory." Go where you will, there will be natural pressure to fall into some very definite "pecking order." If you bring along your own "pecking order," and follow THAT instead, there will, of course, be friction. This is where the "wisdom" of "When in Rome, do as the Romans do" comes from.

In the movie "The Great Escape," the German Colonel running the elite German prison camp asks the American flier if all Americans are so insolent? The reply was: "Just about 99%" So, America itself is a giant macro "pecking order." All the other micro "pecking orders" lie within.

The trick is to find a "pecking order" (or orders) that best suit you. Not so easy in a world where there are so many models to choose from. The Ten Commandments would be a good start!

A huge problem in the United States today is too little quality time being spent by parents with their children. America's great "experiment" exacerbates this problem greatly. Here, almost anything goes, and natural "market forces" sort all of it out and with many bruises and bumps along the way. America is not for the faint of heart.

A related problem is the lack of role models for kids. America will get it right, however. This will take some time as we continue to struggle with all the strong market forces that have a free play in our rough and tumble country, land of the free and home of the brave.

73 and GL de K1MAN

> FDR - Now Follow Me Closely and Don't Get Lost ~ RHF

> God is a Personal Belief
> {The Individual Right To Believe or not.}

Yep, so government should stay out.
* * * Both from Promoting and Prohibiting

> Each and Every American Has Freedom of Religion
> {The Individual Freedom To Believe or not.}

Yep.

> In America - As Americans "WE" as Individual Choose Our
> Own God (no god) and the Level of Belief in that God and
> Daily Amount of Relationship with Our God (Religious Life)
> "WE" as Individuals wish to observe or practice.
> {The Individual Right to Believe as They See Fit To Do So.}

> FDR - As an American - You Want a Name for God ?
> Choose 'your' Own Name for God (Religion) or not.

Can I have my God's holy icon on the Town Hall's lawn during my God's
holy
day? If I believe in Apollo or Zeus can I have them displayed in
lights
during their holy day?
* * * Have you asked

> FDR - As an American - You Want a Place to Worship Your God ?
> Choose 'your' Own Place of Worship for God or not.

I thought that's why we had church.
* * * If a Church is your choice go their.
Some believe that God's Greatest Creation for Us
is this Wonderful World that We Live In and to Go
Out Side and Be Surrounded by It Is All We Need
To-Be-One-With-God !

Then again, at school could someone get a rug out and pray
to Allah in the middle of the day in the middle of the hallway?
* * * Actually some schools do allow this but still prohibit
Christians from Bowing their Heads in a Silent Pray.
* * * FWIW For a while we had a Sikh US Mail Man who wore
his Blue "Uniform" Turban as he made the rounds delivering

the US Mail as an Employee of the US Post Office a 'simi'
Federal Government Agency.
http://en.wikipedia.org/wiki/Sikhism
? ? ? If the Sikh Mail Man can wear is Religious Symbol
Uniform Turban : Then Why or Why ? - Can't a Christian
US Mail Man simply say Merry Christmas when he delivers
the US Mail to his Postal Patrons. Or are the Rules Against
Religion only applicable to Christians ? ? ?

> FDR - As an American - You Want a Relationship with God ?
> Choose 'your' Own Level of Personal Relationship with God or not.

I have and it's really no one elses business. But apparently if you
are
Christian you have to make sure it's everyones business.

FDR - My God Is My God ! - Don't Get Between Me and My God [.]
FDR - Believe What You Will Believe or Choise Not To Believe :
Either Way - Don't Get Between Me and My God [.]

> fdr - yes in america - you-and-god is that simple ~ RHF

Fine. So why does creationism have to be taught in school?
FDR - Creationism is and "ism" and as such - It is an Idea
and Alternative Theory based upon People's Personal Beliefs
-and- It should be disccused as part of the Full and Complete
Exploration of the Sugject - Government should not Promote It
and/or Prohibit It as Part of the body of Knowledge
and part of the History of the Questions :
Who Are We ? -and- How Did We Get Here ?

God {Allah} Bless America and Every American - Amen ~ RHF

I thought that kind of thing was more suited to a mythology class than a
science class.

I'm sure there are mailmen that do say Merry Christmas to people they are friendly with and are Christians. It would be kind of dumb to say Merry Christmas to a Jew or a Muslim or an atheist. I'm sure there are mailmen that wear a cross around their neck too. As for a turban, it appears from what I read that it was a Judaic and Christian garment too, though the Sikh seem to be the only ones that wear it now.

Good, why don't you get close to God now and off yourself? Oh wait, you don't want to be too close.

> FDR - Believe What You Will Believe or Choise Not To Believe :
> Either Way - Don't Get Between Me and My God [.]

Don't get between me and my God either. How do you propose we handle that?

If it was in a religious studies class or a mythology class, then it would be appropriate. I see no reason it has to be taught in science class though. If creationism is a valid way of teaching scince, can we also invoke religion into teaching math, chemistry and thermodynamics? What does Falwell think of entropy? What does Robertson think about quantum mechanics? Should the Pope weigh in on planetary studies?

- Government should not Promote It
> and/or Prohibit It as Part of the body of Knowledge
> and part of the History of the Questions :
> Who Are We ? -and- How Did We Get Here ?

There's plenty of stories about how we got here. If you are a person of faith you already know what the religious stuff says. You've taught your kids. If you haven't then it's your fault. But you as a kid probably don't know about the scientific reasons. Would you rather the government (who most conservatives think is oncompetent) teach your kids about religion, or would you rather have your pastor, priest or religious guide teach them about it?

> Wow! You use them all Joe?!

Yes!

> Have you ever tried the Degen DE31 active antenna?

No, I haven't. From the looks of it, I should have thought its performance would be similar to that of the AOR WL-500 Window Loop Antenna, but, according to PASSPORT, and most of the on-line reviews I have read, it is not.

> And the GR's memories are non-volatile as long as you get batteries changed in like
> 30 seconds, right?

Not true - the memories are truly non-volatile. (This also applies to the Sony ICF-SW35.) You can leave the batteries out for months (probably years, maybe "forever") and the memories remain. You only "lose" the clock time but even then you have at least a minute to change the batteries before the time "erases."

The AC adapter's output voltage is 6 V DC. In my opinion you should NOT buy Sony's AC adapter for this radio (it is a switching-type and is marked, according to PASSPORT, "not for use with radios." Buy Universal's substitute. It costs the same as the Sony's, is of good quality (from what I'm told) and is a transformer-type. It will still cause some hum on SW (and possibly MW), I believe, though nowhere near as much as Sony's. I cannot comment on any AC adapter's performance on FM. I use only NiMH rechargeable batteries with my '7600's.

Best,

Joe

79.8%

Creationism is a myth. A fairy-tale. It has no place isn Science
classes (unless you're studying mass insanity).

Excellent condition! Just off the assembly line.
One owner so far. Will work on 50 or 60 cycles.
All other T/O's work on 60 cycle only.

Probably much less than five hundred hours of use.

Asking $450.00

Shipping included. Will be insured for about $500.00

Will accept payment by "Paypal" certified check, or bank transfer.

email fulfillment@charter.net for more details

2258. Re: The In-the-Attic Horizontal [Flat] Loop Antenna - Just may be the better choice to fill the available space.

Newsgroup: rec.radio.shortwave
Date: 2005-12-14 00:51:04 UTC
From: SeeingEyeDog <lookin@u.org>
Message-ID: <11pur62svi4fk98@corp.supernews.com>
Source record: 54468

One thing you have to remember about the arguments between various antenna types; dipoles, longwires, yagi's. etc. These are all "tuned" antennas (even a random longwire) and their maximum gain is only evident in a single band. While a large horizontal loop of "one wave" in length (example: 80 meters circumference = one wavelength at 3.5MHz) will perform equally to a "half wave" dipole (i.e. 40 meters long) AT THE SAME HEIGHT.

Where the large horizontal loop shines is at all frequencies about its "one wave" length. The large horizontal loop of a theoretical length of 80 meters in circumference will exhibit the characteristics of a dipole at ANY frequency above 3.5MHz. Whereas a halfwave dipole will only exhibit equal performance at 3.5MHz and its multiples (i.e. 7MHz, 14MHz, 21MHz). Everywhere else the dipole will exhibit a loss compared to a large horizontal loop.

The characteristics of our theoretical 80 meter large horizontal loop are "relatively" flat all through the spectrum with much less peaks or valleys compared to a dipole all the way up to at least 30MHz.

It is the ideal antenna for general SWL and HF utility monitoring because its performance is equal all across the shortwave spectrum. Consider its performance similar to a UHF/VHF discone antenna. It exhibits a flat response, no gain or loss (relative to a half-wave vertical), from 50-900MHz! That is about 1000MHz! - that is very "broadbanded."

A large horizontal loop is very broadbanded.
Flat response from its one wavelength circumference and up through the
entire HF bands.

Ah. The Supremes are certain to do whatever benefits the liberals, so
they'll not only throw out the new districting, they'll demand that
it be re-redistricted to favor liberals.

Oh, BTW:
<http://www.cbsnews.com/stories/2005/12/13/ap/politics/mainD8EFIGFG4.shtml>
<http://jmmartin.redstate.org/story/2005/12/3/3284/01062>
<http://wowktv.com/story.cfm?func=viewstory&storyid=7075>

Not that I would criticize Democrats for rigging elections or anything.
After all, that *is* what they do best.

I've got an SX-850 that is in use all the time. 60 watts per channel RMS...(2 channels). They are good units. Bought mine 2nd hand in Alaska in about 1987. Pretty comparable to any transistor unit, not quite as thrilling as my old Dynakit tube equipment, but that got lost.

It generally doesn't make much difference for speakers, if you have an
external crossover or a power amp, it may make some difference
because they can be 'single ended' inputs/devices . Generally the
black side may end up tied to ground (negative ground vehicles).

2282. New User - New Receiver - Reception Questions

Newsgroup: rec.radio.shortwave
Date: 2005-12-14 01:59:27 UTC
From: petercalmly@gmail.com
Message-ID: <1134525567.698640.54350@z14g2000cwz.googlegroups.com>
Source record: 54491

Though I'm not a non-technical person, my area of expertise - or even moderate knowledge - does not rest in the realm of shortwave radios. However, I've always had an interest in pursuing the subject, and towards that end my wife was kind enough to buy me a Grundig Yacht Boy 400PE for the holidays.

My problem is this. After reading the entire manual, reading the Passport text and taking the plunge into the world of sw radio, I'm having trouble getting reception for stations that I would expect to get.

I live in the northeast United States (northern New England). My condo is on the third (top) floor of a 15 unit building. My living room window looks out onto a massive lake with no building in the way through an 8 foot by 8 foot window. I have placed the receiver in this window and even covered the window in an X pattern with the external reel antenna.

Nevertheless, I can't get even a single station that Passport recommends in the "First Tries: Ten Easy Catches" section. I've been listening at night and the band that Grundig recommends as "Good all night everywhere" in the 400PE manual - the 31m band - doesn't have a single frequency that comes in for me. Neither does the 41m band - also recommended as good all night in Northeastern America. The best I've been able to manage are two frequencies in the 49m band - one of which appears to be China Radio International on 5950. Neither of these are terribly clear at that, and the best reception that I've been able to get is with WWCR.

Does anyone have any recommendations? Being new to this, I don't know what I should reasonably expect. Should I expect to be able to pick up a variety of things with moderate clarity. I know that this is all variable on many conditions, but realistically, what should I be expecting here?

Thanks for your help.

At

http://www.aussieseek.com

U.S. Ambassador Zalmay Khalilzad on Tuesday described torture cases discovered in Iraqi police prisons as both extensive and severe, saying more than 120 abused detainees had been found in the two centers run by the Shiite-led government that have been inspected so far.

Khalilzad rejected Interior Ministry officials' suggestion that any mistreatment of prisoners had been mild, saying the abuse found was "far worse than slapping around."

U.S. and Iraqi authorities said the latest search, an inspection of an Interior Ministry special commando unit's detention center in Baghdad on Thursday, found 13 men who required immediate medical treatment among more than 600 detainees in badly crowded conditions. An Iraqi official who U.S. authorities have said had firsthand knowledge of the search said 12 of the men had been subjected to torture that included broken bones, pulled fingernails, cigarettes stamped into skin and electric shocks.

Khalilzad said at a news conference that more than 100 of roughly 170 detainees found last month in the first surprise raid on an Interior Ministry prison had been abused. Officials and witnesses at the time spoke of seeing a number of beaten, emaciated men at that center, a previously secret, underground facility holding mostly Sunni Arabs at an Interior Ministry compound in Baghdad. Interior Minister Bayan Jabr said then that only seven torture cases had been found in the November raid.

In Thursday's inspection, roughly 20 to 25 detainees showed signs of abuse, Khalilzad said.

Iraq's Ministry of Human Rights and other ministries involved in Thursday's raid issued a statement Sunday acknowledging crowding and other problems at the commando prison, including that 13 detainees had been treated badly enough to require medical treatment. Interior Ministry officials, however, have publicly denied torture cases at the second prison.

An Interior Ministry official, Brig. Gen. Saad Latif, said the 13 detainees who were hospitalized had come to the commando unit prison complaining of torture at another prison. Any abuse had happened before the detainees arrived, Latif insisted.

Although Khalilzad confirmed on Tuesday that U.S. military and diplomatic personnel were present at Thursday's raid, the Americans have repeatedly refused to release details of the abuse, saying the Iraqi government should take the lead publicly.

Most of the detainees at both prisons are believed to have been Sunni Arabs, although U.S. officials have confirmed that only at the first facility. The Interior Ministry's security forces are dominated by Shiite Muslims, including former members of militias linked to the Shiite religious parties now in power.

Iraqi officials "show all the positive signs of doing the right thing," said Lt. Col. Barry Johnson, a spokesman for the U.S. military in Iraq. "It's not as if they're trying to cover up these things. They're having these unannounced inspections."

Khalilzad and Gen. George W. Casey Jr., the top U.S. commander in Iraq, publicly rebuked Iraq's government in the first case, and President Bush decried the torture on Monday in a speech in Philadelphia.

"This is unacceptable for this kind of abuse to take place,'' Khalilzad said Tuesday. He urged an accelerated investigation into Iraq's other 1,000-plus detention centers.

Shiite leaders have rejected allegations that Iranian intelligence agents have been present in the Interior Ministry centers. Some of Iraq's Shiite religious parties were founded in exile in Iran and maintain close ties with Iran's Shiite government.

On Tuesday, Khalilzad issued a condemnation, at once specific and veiled, of any Iranian involvement in Iraq.

"There's predatory states, the hegemonic states with aspirations of regional hegemony in the areas, such as Iran," Khalilzad said.

"While we would like good relations, as good a relationship as possible between Iraq and its neighbors, we do not want Iran to interfere in Iraqi internal affairs,'' he said, and went on to cite a list: "We do not want weapons to come across from Iran into Iraq, or training of Iraqis to take place, either directly or indirectly using camps such as Hezbollah. And we do not want Iraqi areas near the Iranian border to be dominated by Iran or some central institutions of Iraq, or for terrorists, al Qaeda types, to come across the border, and so on and so forth."

Khalilzad twice refused to say if the United States believed such events were already occurring. "I have those concerns and I will leave it at that," he said.

Its Horrorfying

[/quote]

Im just wondering how the IRAQ Government can put SADAM on trial when itself is doing far worse than he ever did by dropping prisoners in to

hydrochloric acid bins then dumping the bodies in the street.

Is this what our troops are over there supporting?

Sounds like your condo is built out of concrete and steel. Do you have a balcony? If so try string the reel antenna outside on the balcony. Another option is to run a wire out a window hanging down with a small weight on the end that will not cause any damage to the building, A small rubber ball works well for this. Attaching a wire from the antenna to the window frame itself has helped me in the past. Just experiment and see what works best in your situation. It will take some time to get an understanding on what to expect. Just try experimenting and have fun with it. If you need help we will be around.

Probably something simple. Is your dx/local switch set on dx, as it should be?

Maybe a piece of wire, about 20 feet long, thrown out the window might work better than the whip antenna.

I'd re-read the instructions and make sure all the switches are set correctly.

That said, no station is going to come in, all the time, on a given frequency. Tune around within the 31 meter or other bands. Plenty of stations should pop up.

Source record: 54353

Heard at the Shack on the Bayou in southeast Texas:

0320-0350, December 14, 2005 UTC
1989 kHz carrier freq, CW

4HUY, long dash repeating

very faint, in and out

If it's an amateur beacon, the callsign would be in the Philippines.
At 0330 UTC, half the path would be in daylight, which would be a
pretty tough haul on 160m.

Google and other searches didn't find anything.

Registered Monitor BR549
The Shack on the Bayou- http://www.ghg.net/cliffwatts/

Drake R8 on a 50 foot wire
Sony ICF-SW100, Heathkit GR-64 (retired)
Realistic Pro-2006, Bearcat BC-245XLT

Like someone said,the radio could be defective.You should be able to
pick up a lot of shortwave radio stations.

Peter,

You might try putting some batteries into that Yacht Boy and taking it outside for a listen one evening...someplace away from power lines and potential sources of noise. See what kinda difference that makes.

Many of our modern conveniences create a lot of noise that can effectively bury many a shortwave signal. Granted, even with excessive noise generating sources (e.g. computers, flourescent lights, etc.) in your apartment, you'd expect that a bit more than just WWCR and CRI would get through, if you're sitting by your window.

Actually 31 meter band reception here in NE is not that great lately. Try
the 49 and 41 meter bands first.

I had a similar experience in my apartment in downtown Chicago. I was
on the 52nd floor, facing west. Hot bands, clear skies, no matter.
Nothing, on a Grunding SAT 500. Out in the weeds, stations boomed in
like they were in my back pocket. At home, nothing.

Noise levels weren't much different, or so it appeared, in either location.

Further investigation revealed a couple of things. One was that my radio was being overloaded with the FM's and TV signals downtown. Rectification within buildings, and cross modulation of signals were creating a near uniform blanket of across most of the SW bands. During maintenance periods, this was not the case. Even so, there was still too much noise for decent reception.

In the building were noise sources by the hundreds. Personal computers with large, unshielded CRT monitors, 27" Trinitrons in every apartment. Cable. Seems like every apartment had at LEAST two SCR dimmers. All overlayed on each other. It sounded just like a slightly elevated level of background, thermal and atmospheric noise. And then there was the general shielding provided by the steel infrastructure of the building, and the reinforced concrete floors.

To correct the problem, I asked and was granted permission to run a dipole on the roof above the 57 th floor, and ran a heavily shielded coax transmission line down a window channel to my apartment. It didn't show, so they didn't care. Then a ground lead to the water system, which was all copper to the feed line below ground. Not optimum, but it worked. Not only for the Sat 500, but for the S-40B sitting on the bishop's table in the living room.

Very likely, what you've got is not the huge RF overload that I had, although, you may want to check that out, but a combination of shielding, due to the construction of the building, and many high noise sources from your own, and your neighbors' apartments.

Take your radio outdoors, away from the buildings. Into a park would be a good test. See if you hear anything there. If so the problem is not your radio, but your listening environment.

Pete...

You said you live in a condo over looking a huge lake. Do you have a boat or access to one? If so take that radio out in the boat and test it out on the whip antenna and if the boat is big enough string up your reel antenna. If it's a sailboat you could hook a jumper from the radio antenna or antenna jack to the mast or a stay. Watch out for static producing conditions.

If you have a balcony with a metal railing, try hooking a jumper to that. If you have access to the roof, a longwire should do wonders.

In dealing with radios for many years, the radio is part of the equation but the antenna is a huge part of it... probably the biggest part of it, assuming you have a decent radio, which you do. I wouldn't rely on that telescopic whip unless it's your only choice.

Sometimes learning and experimenting in the beginning can be very rewarding.

Please keep us informed on your progress.

Can you elaborate on the X pattern?

If you run the long wire east to west, then the reception is best to
the north and south, and vice versa.

Looks like two philips head screws on each side of the radio cabinet
that holds the cabinet to the radio chassis.I will set the radio on a
table later on today and remove the cabinet and see what is loose and
makes that rattling around noise in there.Maybe it's a little piece of
plastic that isn't really important or somebody could have dropped a
paperclip or whatever through the grill on top of the radio.

Dale [W4OP]

Google showed your two posts as prior post ">"

Post # 1
What does this mean?
Broadbanded how?
What does this have to do with the radiation pattern?
Dale W4OP

Post # 2
I'll give you that- I modeled a 1/2 wave 80M dipole at 60'
and a full wave loop at 60'.
Although the loop had a narrower VSWR bandwidth than
the dipole on 80M, it was no contest on bands above that-
patterns are squirrely, but the BW is quite interesting, and
makes it usable with most built in tuners

For One and All,

To Take a Direct look at the Lexon Rubber Radio
http://www.popgadget.net/2005/12/lexon_rubber_ra.php
The Lexon water resistant, rubber encased AM/FM Radio is minimalist design in its purest sense. There are no extraneous parts or features - the antenna is the tuner and there is a simple on/off button at the top, and volume and AM/FM buttons on the front. That's it. Pretty lo-fi when you think about it, but that's why I love it. Everything is so cold these days, all brushed metal and stainless steel. This little green radio looks like it was carved out of soap or wax.

2326. Re: New User - New Receiver - Reception Questions

Newsgroup: rec.radio.shortwave
Date: 2005-12-14 09:16:50 UTC
From: petercalmly@gmail.com
Message-ID: <1134551810.796612.113310@z14g2000cwz.googlegroups.com>
Source record: 54385

My goodness! Thank you all for the incredible wealth of insight and advice! While I can't say that my problems are yet solved, I can report the results from my latest tests. Though I'm starting with relatively little technical knowledge I suspect that I am nevertheless hooked - if venturing out in -2 degree (F) weather in the middle of the night to test my radio counts as being hooked.

The first thing I did was to take Bob's advice and double check all the switches. It's always something simple, right? Well, the SSB switch was set to off, so I set that to on right away. Everything else is as it should be.

As it *is* the middle of the night, procuring wire for antenna is an impossibility so I did what I could in the meantime. On the recommendation of Junius and others I grabbed some batteries, popped them in the Yacht Boy and ventured out onto one of the piers here on the lake. Not much around save water, though there are some power lines not far in the distance. It was bitter cold, so I didn't bother trying to rig up the reel antenna to anything and relied only on the whip.

I tried all of the frequencies recommended by mcdonald606a - 5975, 7415, 6616, 12095 & 1170. This was all just after the start of the 0600 UTC hour. My research tells me that I should have heard the following:

WBCQ (from Maine, USA) on 7415
BBC World Service on 12095
Nothing on 5975 (gap in schedule)

but I couldn't turn up anything at any time for any day on 6166.

And what did I hear? Nothing, save for some weak voices on 1170. Now by my understanding, 1170 would technically be an AM or MW frequency, correct? And mcdonald606a says that it's WWVA from West Virginia. I also turned up, in my reading, a listing for Radio Farda on the same frequency. Is this correct? I have to say though, the voice seemed to indicate much more of the scheduled "Truckin' Bozo" from WWVA than anything that could possibly have been on Radio Farda. Am I in fact correct in understanding that they are the same frequency though? The bad news is that the reception was still not terribly intelligible. Lots of noise. Distorted voices.

I then packed up, hopped in the car and drove out of town to a fairly remote location where I found a wonderful field to stop at. Again, much of the same. The good news is that since I changed the SSB switch

to "on", I can pick up a lot more, but only enough to make out that it is supposed to be a broadcast of some sort, never anything that could actually be listened to and understood. While in the field I cruised around the 49 and 41 meter bands per Brian's recommendation. No luck. Just more of the "ooh, ooh, what was that" experience. Nothing ever actually comes in.

I'm going to continue pushing forward and will be visiting the electronics store tomorrow to look into antennas. After all the recommendations - and especially the encouraging words of GYT - I'm hoping that a decent antenna will help to solve the problems.

Feel free to weigh in again after reading this update, and I'll be sure to post the results of the next step in testing.

BTW - Regarding the question about that X pattern... My huge window faces west - much like Peter Maus' - and the X crosses it, which would make it run north/south (or more of a slightly NE/SW in my case). I also have a lot of electronics in the house - something that Peter also mentioned - so I did take the liberty of turning them all off, but who knows what others in the building are running. It's a small building and I can pick up at least 4 wireless networks so I'm guessing that the neighbors are pretty tech-laden as well. But the outdoor tests should have shed some light on all this...

When I was a kid, my dad and I built a box kit based on the US Army Air Corp
rscue box kite. He had scrounged up several yards of the yuckiest yellow I
have ever seen. It would fly with much lower wind speeds then the drug store
"franklin" kite. And when we would fly it we always got a lot of attention.

He tried several mil surplus mail order stores for the twin with wire used
by real kite antennas, but had no luck. He wanted to see how well a 100'
kite antenna would work with my crystal radio.

Thanks, for now I have another item to add to my ever increasing project list.
:-)

Terry

WRTH 1947 to 1958 REPRINT

Twelve editions with fully text search function on a CD! This is a joint venture between the WRTH Co. and ADDX on the occasion of the 60th edition of the WRTH! The rare old copies of the first editions of the WRTH occasionally can be found at eBay auction. Thus the 1949 edition was sold this summer for 750 U.S. Dollars! The first twelve editions have now been scanned and are sold on a CD which I have had a look at. It is very easy to work with and highly recommendable to all people interested in broadcast radio history. More at http://www.addx.de/Service/CDreprint.php . Until Jan 31, 2006, it is sold for 40 Euro including postage. After that date the CD will cost 50 Euro. Send your order and payment directly to ADDX, Scharsbergweg 14, D-41189 Moenchengladbach, Germany. Bank transfer to ADDX-Konto Nr. 8686800 at Deutschen Bank, Duesseldorf, BLZ 30070024 (IBAN: DE 7030 0700 1000 0868 6800, BIC: DEUT DE DB DUE). (Schmitz and Petersen)

Turn the SSB off. 99.9% of the time, you want AM setting for
international SW broadcasting. Go outside. 1170 kHz was WWVA. Radio
Farda may use that as a frequency, but it would be an amazing catch in
the US. Radio Farda does show up on the SW bands.

http://www.rferl.org/listen/shortwave/default-frd.asp

You should easily be able to hear Radio Exterior de España about 3 p.m.
Boston time every afternoon. I used to hear them at 15110 kHz, but that
frequency does not seem to be in use now. REE broadcasts futbol
(soccer) games; you'll recognize the animated play-by-play commentary
instantly.

I think there was a misunderstanding about the SSB switch. It is useful only for listening to ham radio and similar signals that use the single side band mode of transmitting signals. None of the broadcasters such as BBC, Radio Australia and Radio China use that mode. Consequently if the switch is left on the audio will be unintelligible as you found out. So set it to off.

For your first DX catch on the east coast try listening to 9580 in the morning from 6:00 to 8:00. You should hear Radio Australia loud and clear. I've been SWLing for 20 years and it is still thrilling to catch that signal from down under.

For an up to date listing of current radio broadcasts get a copy of Monitoring Times magazine http://www.monitoringtimes.com/ . The center section is an extensive listing of frequencies by time and broadcaster.

The time of day that you are listening will determine which bands you are most likely to hear signals on. Rather than searching for specific frequencies at this point just tune around the following bands at these times:

5.8 to 6.4mhz late afternoon, evening and morning.

7.0 to 7.5 mhz late afternoon, evening and morning.

9.5 to 10mhz late afternoon, evening and morning.

11.6 to 12.2 mhz afternoon and evening.

13.5 to 13.8 mhz daytime and evening.

15.0 to 15.8 mhz daytime and early evening.

17.4 to 17.9 mhz daytime and early evening.

21.4 to 21.8 mhz daytime.

You should find something on each of these bands, and expect that 5.8 to 6.4 and 7.0 to 7.5 will have a good deal of activity at night. Sit close to a window with the antenna fully extended and you should hear something. Good luck and tell us what you hear.

With the Degen DE31 active antenna that is? I'd imagine so.

If anyone has a AN-LP1 they could see parting with, I'd like to make an offer -"paging Joe Analssandrini, Joe Analssandrini, to the green concourse please" ;-)

I'm looking forward to getting back to SWLing with my new 7600GR. I've a bit more solid knowledge of the frequency spectrum and general propagation this time around so I feel I'll get more out of it. I look forward to posting and participating here at RRS again too.

Some shops may have old stock. But not likely. The average shelf time of a Drake is particularly short. All the Drake HF products have been discontinued, so the used market is the only outlet.

Now, you can check for trade-ins at Universal Radio, Ham Radio Outlet, and other radio related shops. But a used Drake will not stay on the ground long. If you find one, you'll have to move on it quickly. Have your credit card handy. Operators are standing by.

You may also wish to contact Drake directly. I got my SW-2 directly from them after the line was discontinued. Factory refurbs do exist, but they're rare.

Good luck.

2352. Nearby Lightning Protection Quest. ?

Newsgroup: rec.radio.shortwave
Date: 2005-12-14 16:09:09 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <4KednXKIIb8_3j3enZ2dnUVZ_tydnZ2d@comcast.com>

Hi,

Have an attic located, receiving only, random length antenna.

Thinking of stringing one outdoors, but have a few questions, and concerns, regarding nearby lightning.

a. would you folks agree that having it indoors under the house roof, probably provides 0.0 % added protection relative to if it was outdoors ? That any additional indoor protection due to being indoors is probably more psychological than anything else ?

b. We gets lots of lighning strikes around here. Happy to say that they have all been "nearby".
This is the crux of what concerns me.

I can't help but feel that if there ever was a truly direct strike on the wire running (horizontally) outdoors,
a gas discharge tube protector like the Alpha-Delta ones wouldn't really help much.

But, for the nearby strikes, where possibly just a few hundred volts perhaps is induced into the wire (but enough to fry the radios front end), would the Alpha Delta types even trigger ?

c. what's the best protection for "nearby" strikes, other than a total disconnect ?

BTW: would grounding of the wire be equally effective as a total disconnect of it ?

Thanks,
Bob

Pete,

Another helpful tool is:

http://www.anarc.org/naswa/swlguide/

Scroll down to the bottom and click on
"LIST PROGRAMS AT CURRENT HOUR"

It's sort of like a TV Guide for Shortwave radio.

That SSB (Single Side Band) switch should be off for now. It is used primarily for the Amateur Bands (Ham Radio). It can be used on AM broadcasts in certain situations to cut down on interference but we are skipping ahead just a bit.

There is another possibility in all of this and this is that the radio could be defective. You should be able to pick up something. Let's not throw in the towel just yet though.

CAUTION! This is a last resort suggestion. I take no responsibility for the outcome. Sometimes when things appear hopeless, I read the instruction booklets. Yes I know that this sounds desperate but there have been times when I have actually gotten useful information from these things. Try it if you haven't already to see if there might be some useful tidbit of information that would pull this whole thing together.

You might want to list what city (not address) you are in and possible someone on here is located there and can help you out by checking out your radio by letting you hook it up to one of their antennas.

One other thing, if you are using batteries, make sure that they are fresh. This can have an effect. Keep us informed on your progress.

2354. Gas Discharge Lightning Protector Units ?

Newsgroup: rec.radio.shortwave

Hello:

Thinking of getting (finally) one of the gas discharge tube lighning
"protectors: for my receiving only long wire antenna.

Radio is grounded (hopefully) via a solid strap to the water pipes and also
via the ac power center-pin
grounding pin.

a. They seem to come in two flavors. One with an extra lug for running
another ground wire, and those that don't; the argument being, I guess, that
the metal case connects to the chassis
(e.g., via a short piece of coax), and thus shunts any voltage transients
that way.

Any opinions on whether the lug with a separate ground wire is a good idea
and really needed ?

b. Alpha Delta units still pretty much the state of the art, or... ?

c. They usually quote a number like 60 V for the gas discharge tripping.
Wouldn't this usually be more than enough to fry the front end ?

Thanks,
bob

Having your antenna indoors probably provides a little help against a direct strike because odds are there'll be flashing or something else that's metal above it. But I doubt it would be meaningful. I know someone who had a direct strike at his house and besides the damage you'd expect, he had a gaping hole in a corner of his basement - the cement was turned to dust.

Near strikes can still cause a lot of damage.

I use an impedance matching transformer with a couple of ground rods out by the antenna, and I use fat stranded wire to the ground rods.

The last near strike caused some of the antenna wire to melt, the ferrite for the transformer vaporized, and bits of the abs plastic outdoor electrical box it was in were found 15 feet from where it was mounted.

The coax to the house, and my radio was fine - possibly because I use a polyphaser between the transformer and the coax too.

Hi all
well, my degen 1103 arrived yesterday, my first impression upon opening the box were not good.
it is very small, isn't it.
but then i switched it on, after getting used to the awkward volume controls i started to hunt around the bands.
I was very impressed to be honest, it certainly is a sensitive radio all round. if anything i think the narrow filter makes lw sound bad and the wide filter makes it sound tiney, but then what can you expect from a radio costing $30
all in all I am happy with it, it fares very well against both my 7600gr and 7600d, and leaves my grundig yb400 standing. not tested it up against my 2010 yet but not expecting it to outdo that one.
thanks for all your replies to my post regarding this radio
regards
Roger

When I first started buying this software it was $80 full price. The
program has improved over the years and occasionally I have upgraded but
it has been years now that the price has been going up astronomically.

I'm going to have to do something as the old versions is running on an
old Mac 8500 under sys 8.5 and I want to get rid of it. Other math
programs are in the same range expense wise as are most high end CAD
programs.

The sync works better on the B rev. I'm not sure why you would want the E rev since it has some restrictions on the frequency range.

We did a shoot out once (multiple radios tested at the same location/antenna.). The Drake sync doesn't work as well as the AR7030 on weak signals, otherwise it's pretty good. The sync not that big of a deal, and used Drake R8's are half the price of the AR7030+. If you ever operate in the field, I'd suggest the AR7030 as it is much more compact. The Drake is big due to the number of buttons on the panel. The 7030 uses a menus approach that reduces the number of buttons, but some people just can't handle it.

> wavelngth rule above 2.5MHz.

Maybe my choice of words was not the best. Electrically small antennas
does usually mean 1/10 or less wavelength.

Here 1 wavelength loop (MHz) = ~ 1005/feet.

To clarify, generally under a wavelength loops have visibility on edge
and at one wavelength or more into and out of the loop plane so a
horizontal loop would have visibility in its plane up to < 25 MHz and
then tend to look up > 25 MHz. At < 25 MHz the loop would tend to look
omnidirectional.

You could argue that their would be horizontal directionality depending on frequency under 25 MHz but SW tends not to be highly directional the higher you go in frequency and at much lower frequency the loop looks increasingly electrically small. The over all effect will be omnidirectional at < 25 MHz.

That is an interesting WWII artifact. Of the many airmen who were shot down, I wonder if any were able to make contact using this kite supported antenna.

I would imagine many of those came on the surplus market at the conclusion of the war. As a kid I found the local surplus store was a treasure trove of interesting things. A pilot chute with the spring mechanism removed and a decent fishing weight tied to the strings would sail a long ways in a good wind. And I disassembled more than one tank scope for those big solid glass prisms.

They ALL have a provision for 220 VAC input. The R8E is same as the R8, with exception of broadcast band coverage. The coverage was reduced to meet German regulations on import receivers. This regulation has since been changed.

Don't bother asking me what part of the coverage was omitted as I don't know.

Look at the schematic (scroll down):

http://www.geocities.com/qrp_baluns/QB-9E.html

Note that all points are at DC Ground. Put one of these near the
ground with a nice short fat wire running to a proper ground and
you'll be protected against anything but a direct strike. This

actually is better than a gas discharge tube because it drains of ALL
static electricity, not just that above a certain voltage.

In my experience the R8B's sync detector is a definite step up from that of the 7030+, even though the latter is very good. I think the R8B's sync detector is probably the best one available in a consumer grade receiver. Others may see it differently, but there's my two cents. I do like the way you have both automatic and manual settings for the sync on the 7030+, and it's neat to watch the receiver retune itself with the sync detector auto mode. Still, if we're only talking about the ability to make weak, messy signals intelligible, the R8B wins.

If the loop is significantly closer to the ground than the dipole then
it is an unfair comparison. Antenna height is a large parameter to beat
with another antenna.

You can buy used radios at Universal radio. There are none at this time
but you can check this page from time to time.

People don't change their basic natures and for Kerry it's he knows
better then the rest of us or in other words he is an elitist. He was
negotiating "a peace plan" with the vietcong wile the USA was
conducting war undermining the administration and he also defamed our
troops in Vietnam when he was not elected to any government office. He
just did the same thing the other day with the Iraqi war as Senator
this time around.

If he ever becomes president he will have to undermine himself and
probably develop a split personality as a result.

John "I was for it until I was against it" Kerry.

The R8 and R8E are the same, the "E" denoting the European version that had
certain frequencies blocked.
The R8 is a fine radio but a bit dated by today's standards, but if you pick
one up at a good price you will be very satisfied.

The R8A and R8B are the same except for the "B" having a really stupendous
sideband sync detector that makes listening to AM programming an absolute
pleasure. The "B" also has 1000 memories as against 400 on the "A".
Both these radio's are top of the line for serious DXing (ask dxAce).
See my review of the Drake R8A with B updates at

I lived in a VERY high lightning strike area and had two direct hits on my antennas and several nearby ones.

There is no protection against a direct strike -> it's going to blow all your radio gear and the entire house, even blew my water mains as I had earthed the antenna with a heavy copper strap to the copper water pipes.

Powerful nearby strikes just "jump" the gas protectors as the spark generated can be several inches long.

What I learnt through hard experience was:
DON'T
1). have your antennas higher than surrounding rooftops and trees - all you will be doing is attract the lightning.
2). put a heavy earth strap on your antenna - it just provides a perfect path for the lightning to ground.

You do have to ground your antenna's to bleed off static and provide a "radio" earth to your antenna's, but this ground lead should be as thin as possible, then it doesn't attract the lightning and acts as a fusible link in the case of a nearby strike.

The loop is vertically polarized- so takeoff angle is not effected by height above ground.
In addition, I'm on a mountain top some 100' above a large lake.

Dated in a relative sense; there were some tweaks
between the R8 and R8A, but unless you really
want the improved ergonomics of the A, you can
do just fine with a regular R8. Ace acquired an
A about a half a year ago, and he didn't notice
too much of a difference between it and his regular
R8. (Did I get that right, Ace?)

The R8 series is the one that supplanted the
previous generation of tabletops (R-5000, IC-R71A
and NRD-525) as the top of the line in the tabletop
(non-professional grade) radio.

Source record: 54312

Single point earth ground is THE most critical component of a lightning protection 'system'. Yes it is a system - not just one silly component called a protector. If that protector does not discuss the 'system', then the protector is suspect.

Do you think for one minute that the radio chassis ground is sufficient for protection? The you did not even learn principles taught in primary school concerning Ben Franklin.

Does a protector stop, block, or absorb the transient? Only in your dreams. Effective protectors perform same as Franklin demonstrated in 1752. You don't stop, block, or absorb what three miles of sky could not. And yet that is the snake oil that some protector manufacturers sell to those in denial of their primary school science lessons.

Protector is nothing more than a temporary connection from that lightning struck antenna to earth ground. Sometimes that connection can be made with a wire. But if a direct hardwire connection cannot be made (ie to AC electric or telephone), then we use a protector to do the same thing.

Furthermore distance to earth is critical. The connection through protector must be less than 10 feet. That means the antenna lead must first drop to earth so that a protector can make the less than 10 foot connection to earth ground.

Also water pipes have long been unacceptable grounding. The only wire connected to water pipes is a wire that removes electricity from those pipes. This being post 1990 code. Furthermore, grounding to water pipes would be more than 10 feet to earth ground - totally unacceptable.

In the other post is a concept essential to lightning protection - the single point earth ground. It is demonstrated by this industry professional where each structure - the building and the tower - have their own single point earth grounds:

http://www.erico.com/public/library/fep/technotes/tncr002.pdf

From
http://lists.contesting.com/_towertalk/1997-April/004413.html
> The basic scenario is to install a Single Point Ground
> System that is installed at the building entry. It shunts
> everything to ground before it goes in the building. If

> you can keep it outside, then you don't really have to do
> much inside. IMO disconnecting the cables is more
> psychological than preventive.

Yes, early 20th Century hams would disconnect the antenna,
put that antenna lead inside a mason jar, and still suffer
damage. Again the idea that one would stop or block the
direct lightning strike was proven wrong - as demonstrated by
others who even suffered explosive damage as a result. Once
that antenna lead was earthed, then lightning damage stopped.
Success because they shunted (connected, diverted) lightning
to earth (what it seeks) rather than silly mythical solutions
that try to stop or absorb a transient. The most critical
component in a lightning protection system is not the
protector. The protection 'system' is only as effective as
its most critical component - single point earth ground.

Here in Seattle, this time of year, a bit before midnight, I would expect to get what you've got. Nothing. Some bad space weather this week, a low spot in the solar cycle, and the seasonal poor propagation means that there's nothing to hear until the Asian/Pacific stations drop down to lower frequencies for their evening (their local time) broadcasts. They're broadcasting, but the 17, 15 and 13 MHz signals just don't get here. Even Radio Australia on 9590 and 9580, at 08:00 UTC, has been iffy this week.

Try 6165 from 0:00 to 2:00 UTC for Radio Netherlands from their Caribean site. And try the 15 and 17 MHz bands (I don't do Meters) around 3-4 PM local time. And the 6, 7, and 9 MHz bands in the morning before 9 AM local.

The real advantage of a 7030+ in the field is it draws a lot less power.

The loop is on a short tower at 20'- vertically polarized. At far field
distances, it's effectively 100' or so.

I owned them all. I started with a new R-8A but got rid of it after Drake couldn't fix internal birdies...some of which were S-8 in the MW Band. Dumped it on ebay several years ago. Internal birdies generated by the display and uP chip....internal shielding inside the R-8 series of radio's is a joke....they're built like Muntz TV sets: no shielding, gobs of long wire harnesses. Why my 8A was such a problem I can only contribute to the uP chip radiating like a bitch.

I bought a real nice R-8B with VHF from this Newsgroup for $950 about five years ago. The selectable-sideband sync on AM is fantastic. I grew tired of looking at it unused... as I'm not a serious SWL'er and sold it on ebay for about $1200 about 2 years ago. I liked the 8B alot and probably should have kept it.

I purchased an R-8 with VHF and MS-8 on eBay for $575 about one year ago. It is my favorite (believe it or not!). I like "simpler is better". The "Plain 8" is a fine receiver and an excellent value. I only use it about once a week, so it does fine for me.

It's safe to say that one model is not any sensitive than the other....except the Preamp (on MW) is not usable on the 8, it can be enabled on the 8A, 8B. Not a big deal, though.

I won't discuss the ergo or sync improvement issues on the models...not enuf time.

Good luck.

Make sure to search QTH.com classifieds. The 8B or 8 is a safe bet in my book.

I still occasionally wonder why I sold my R70, since
it would do well enough for a DXing rig to compliment
the Sat 800 I have. Although I have to admit that
I still kick myself for not having followed through
and bought the R8A from you when you'd made it
plain you were interested in selling.

Oh well.

Dear DJ,

Sorry - none of my AN-LP1's are for sale; I use all of them.

Try AES < http://www.aesham.com/ > . That's where I bought four of mine (I got my first one from Universal). You can't buy it on line frfom them - you must telephone them (toll-free). They seem to have them in stock more reliably than other dealers.

It's an excellent antenna when used with the Sony ICF-SW7600GR. I believe you'll be pleased with it.

Best,

Joe

HOW OUR T-BONDS "IMMIGRATED" TO CHINA
http://unemployment_crisis.tripod.com/IMMIGRATION.html

Roy Beck, a liberal progressive ... read here his classic 1996 book

"THE CASE AGAINST ILLEGAL IMMIGRATION: The moral, economic, social, and environmental reasons for reducing U.S. immigration back to traditional levels" ... even more sensible and applicable today ... click here to download the entire nearly 400 page book for free!

Reviews of Roy Beck's book, click here!

Fannie Mae is a "government sponsored enterprise", aka a 'GSE'. Are Mitigation Banks for Wetlands a GSE also??? Considering the WHOPPER federal funding handouts [welfare for Big Business] to both sneaky anti-eco Mitigation Banks, and the sly & shifty Fannie, it sure seems so!!

What is a MITIGATION BANK and what does it have to do with military engineers and wetland swap deals and New Orleans Reconstruction?

[Critical Habitats Inc.] MITIGATION BANKS CONSORTIUM, and Palacios Wetland Mitigation Bank, Matagorda Texas on the Gulf Coast! -- 'In-Lieu-Fee' Mitigation
-- http://www2.eli.org/wmb/backgroundb.htm

HOW CAN YOU HELP MOTHER NATURE and the Gulf Coast Victims?
Who Are Your Wetland Mitigation Bank Customers?? Not the displaced and dissed HOMELANDERS of the Gulf Coast ... they were/are 'sitting ducks'

The following is a list of some activities in your region that will impact wetlands and generate demand for your wetland bank.
http://www.criticalhabitats.com/about.htm

WHO MITIGATION BANKS HELP THE MOST!!

** The U.S. Army Corp. of Engineers [COE]

**Transportation development such as highway or road widenings, new road development, parking areas

**Utilities such as oil pipeline construction, power line construction, hydroelectric power development

**Commercial Marinas

**Commercial and industrial construction including shopping centers and industrial parks

**Giant Residential developers

In-lieu-fee mitigation is a method for satisfying compensatory wetland mitigation requirements. With in-lieu-fee programs, project applicants agree to contribute mitigation fees to an approved third party that will use these funds to implement the required compensation. In-lieu-fee mitigation is similar to wetland mitigation banking in that they both provide consolidated, off-site mitigation for multiple permit recipients.

Although in theory, wetland mitigation banking provides compensatory mitigation in advance of authorized impacts, in-lieu-fee mitigation does not offer this benefit. Mitigation funds are collected in advance of permitted impacts, but the funds may not be used to compensate for permitted losses for some time. In-lieu-fee mitigation can, however, be used to restore a variety of wetland types of varying sizes at a number of locations, while mitigation banks frequently consolidate numerous wetland impacts into one large site. Until 2001, there were no standards governing approval or use of in-lieu-fee programs.

In-lieu-fee mitigation â☐☐occurs in circumstances where a permittee provides funds to an in-lieu-fee sponsor instead of either completing project-specific mitigation or purchasing credits from a mitigation bank approved under the Banking Guidance.â☐☐

Source: U.S. Department of the Army, U.S. Environmental Protection Agency, U.S. Department of Interior, and U.S. Department of Commerce. Federal Guidance on the Use of In-Lieu-Fee Arrangements for Compensatory Mitigation under Section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act. 2000.

BENJAMIN SHALOM BERNANKE, our new Fed Reserve Chairman, will he fix the trillions $$$$ debt to China/Asia, and spontaneously generate new magic bullet T-bonds for our Treasury!?? ....click on above link to see how Fannie Mae home loan mortgages work against the US public with the collusion of the U.S. Treasury, and how together they have gutted our nation like a megalomaniac Bonnie & Clyde ... this strategy goes by the name of "CARRYING TRADE," which means foreigners can borrow at cheap rates in the United States and pump the proceeds into China.

Here is how it works! FANNIE MAE, did you know that only one US bank is fatter and richer than Fannie Mae, our most powerful dispenser of money [home mortgage loans] than any U.S. commerical bank, besides Citibank, its sole superior? Fannie Mae doles out trillions in home loans which are tied into U.S. tax dollars & the US Treasury. This includes muy MUCHO bad home loans to illegal immigrants -- just check out Bank of America records or hang out in a Latino neighborhood bank branch and listen in if you can speak Spanish. When this TRILLIONS goes SPLIFF!, where is the cash to back it up? It has all disappeared without a trace same as our pension funds!

Our US Treasury will be under much pressure to owe up somehow at the time of the meltdown which will come at the same time that the Chinese Dragon starts to fly to Mars and soars the skies above our heads -- making a laughing stock of our National Reconnaissance Organization spy satellites -- and leaving us behind financially, culturally, and materialistically, like an overextended 7-11 store chock full o'Minnie mouses!

CHINA -- The Chinese have been long buying up the vast bulk of our T-bonds. Our CEOs and our Federal Reserve and our Congress have BEEN ALL FOR IT! The Japanese yen and the British pound are not pegged to our dollar like the Chinese yuan, so don't get your panties in a twist fretting over the Japanese and British small island nations holding some of our T-bonds.

The Chinese have been raking in money from this CARRYING TRADE deal and are making a killing off of the interest we must pay them. In a parallel universe, the Communist Chinese [suddenly in the last decade at least] are brilliant venture capitalists and have their own mirror image T-bond structure in their bloated Treasury, looking a lot unlike our thin Lizzy! They got all of Europe and most of the world buying up their own T-bonds like hot dogs on Coney Island. Funny thing is, almost not even one Chinese elite will touch their own Chinese T-bonds. They don't buy them! They know why! It's time for you readers to get hip too!

Thus, funny money in our Treasury is backing up the growth of illegal immigrant housing in the US and also the most powerful boom in China not seen since the building of the Great Pyramids in ancient Egypt! We are the sad losers, wasting away our very short and desperately needed time to defeat an illusory monster in the sand dunes and Gulfs of ancient Babylon, and doing next to nothing for our Gulf Coast wounded here at home!

Why are we helping undocumented aliens in the USA to buy homes and cars and SUVs and giving away our assets to the booming Chinese economy, who today as a middle class live better than our middle class in the USA, especially better than the dissed and neglected displaced denizens of New Orleans. We have produced a surplus of native born PhDs in science and engineering right here at home, for over a decade or two, and yet our lawyers and Senators have been doling out H1-B visas to alien scientists and engineers!

Our exports are laughable compared to Germany ... thus, do we have any real money left in our Treasury that has not been spent on contractors such as Halliburton and Wackenhut and KBG and Caryle Group and USIS, just to mention a few of the insiders, with no bid contracts awash over in Afghanistan and Iraq for these parasites. I don't think so. Prove me wrong, make my day. When even our own unions do NOTHING to help African Americans nor blue collar workers nor our rapidly shrinking and vanishing middle class to stay afloat and to train to keep abreast of new technologies, when these impotent and supplicating and feather lined union managers can only reach out like beggars to help ONLY

illegal immigrants to organize and strike against Big Business abuses, and not organize and assist us legals, we are in need of some new founding fathers and a new and bolder drum and fife corps! Lace up your boots and pump up the volume! Make some music and make yourself heard!

EMERGENCY ALERT CODE RAINBOW, CODE ENIGMA

"Illegal Immigrant Language teachers arrested at top security U.S. military base"

WASHINGTON (Reuters) - Two Indonesians and a Senegalese who worked as foreign language instructors for elite U.S. special operations troops at Fort Bragg, North Carolina, have been arrested on immigration charges, authorities said on Wednesday.

The Army said the three worked at the John F. Kennedy Special Warfare Center and School at Fort Bragg. Sgt. Joseph Healy, a spokesman for Army Special Operations Command, said the three had a purely academic role and "were not exposed to any Army special operations tactics techniques or procedures."

U.S. Immigration and Customs Enforcement (ICE) said the arrests were part of an effort to remove illegal immigrants working at sensitive U.S. sites and critical infrastructure locations such as airports, seaports, nuclear plants, chemical plants and military bases.

ICE agents on Tuesday arrested Indonesians Nurkis Qadariah, 34, and Sayf Rimal, 37, and charged them with possessing and using false immigration documents and making false statements, the agency said.

They were contractors working for BIB Consultants Inc., a Florida-based company that provides language instructors to U.S. Special Forces and other military personnel at Fort Bragg. Criminal complaints filed against them said they used counterfeit Resident Alien cards and falsely claimed they were lawful U.S. permanent residents to get work with BIB.

Authorities said there were pending deportation proceedings against Qadariah and Rimal in New York.

ICE agents also arrested Senegalese Ousmane Moreau, 38, as part of the same investigation and charged him with being in the United States illegally, which will lead to proceedings to remove him from the country, the agency said.

"Unauthorized workers who use fraudulent documents to gain work at sensitive U.S. military installations pose a serious homeland security threat," Jeff Jordan, the agency's assistant special agent-in-charge in Charlotte, North Carolina, said in a statement.

"Not only are their identities in question, but they are also vulnerable to potential exploitation by terrorists and other criminals given their illegal status in this country," Jordan said. "Furthermore, these individuals have access to some of the most sensitive work sites in the nation."

Authorities said the arrests stemmed from an investigation by ICE, the Defense Criminal Investigative Service, the Army Criminal Investigation Command and Fort Bragg security officials.

click HERE to read about IMPENDING CREDIT CARD DENIAL, ANTI-GW RIOTS in the STREETS....regarding his April 2005 signing of the "BANKRUPTCY ABUSE PREVENTION and CONSUMER PROTECTION ACT" ... of which 84% of all bankruptcy filers are too poor to qualify for the new law's "mean's test"

click here to read about Dubya's monstrously cold disenfranchisement of the struggling middle and lower classes of USA through his bill stripping away rights to claim bankruptcy against old credit card debts ... this has kept our unemployment rate down from 19% to 5.6%! GW is the loser with his signing of the Bankruptcy Abuse Prevention and Consumer Protection Act....another special treatment for the very rich, the pretty rich, and the banks

THE ADRIAN REPORT ON ILLEGAL IMMIGRATION

Volume 2 -- The Benjamin Shalom Bernanke edition

U.S. Treasury Bonds [T-bonds, as in CHINA] Fall on Appointment of New Fed Chairman Benjamin Shalom Bernanke, a Republican Everyone Knew Shalom Bernanke would get the plum Chairmanship for over a year now ....

10-25-2005 -- U.S. 10-year Treasury notes fell the most in four weeks as "Just Print Me Some More of them $100s" Benjamin Shalom Bernanke was named to succeed Alan Greenspan as Federal Reserve chairman.

Treasury bonds last week made a small rally as miserably falling U.S. stock prices enhanced the appeal of yields higher than 4.50 percent. Still, the Treasury market is headed for its worst year of returns since 1999.

"MISTER DEFLATION
[Our new Republican]" ... As a child, Benjamin Shalom Bernanke honed his analytical mind by playing chess and studying Hebrew at the local

synagogue ... Shalom Bernanke argues that America's trillions of dollars of trade deficit and debts to China, especially in regards to our T-bonds tied to the home mortgage loan industry and Fannie Mae, are not responsible for our woes, but rather that the disciplined European nations, and dutiful Japan, through their diligence for maintaining healthy savings accounts, is what put us in our empty house of cards!

President Bush announced that Chairman of the Council of Economic Advisers Benjamin Shalom Bernanke-(R), will replace Alan Greenspan as Chairman of the Federal Reserve in the Oval Office, October 24, 2005. (Larry Downing/Reuters)

A Fed governor from August 2002 to June 2005, Bernanke during his first year raised concern in speeches about the possibility of deflation, or broad price declines that hurt economic growth. He sees disaster when consumer prices begin falling.

Many expressed concerned about comments Bernanke made in a speech as Fed governor that suggested he would consider actually sparking higher inflation in order to combat the threat of deflation, or falling prices that can cripple the economy.

BAPTISM INTO THE THIRD MILLENIUM--->

Gold Bar Hoarding
rose 38% in 2004 and gold coin fabrication rose by 7%--- this trend is tripling in 2005

HAPPY NEW YEAR [this year dress up as chairman of the Fed Reserve, the scariest ghost of last year!!

Says Bernanke: "The U.S. government has a technology, called a printing press (or, today, its electronic equivalent), that allows it to produce as many U.S. dollars as it wishes at essentially no cost," Bernanke said in remarks to the National Economists Club in Washington in November 2002.

"By increasing the number of U.S. dollars in circulation, or even by credibly threatening to do so, the U.S. government can also reduce the value of a dollar in terms of goods and services, which is equivalent to raising the prices in dollars of those goods and services," he said.

During that speech, Bernanke added that "prevention of deflation remains preferable to having to cure it. If we do fall into deflation,

however, we can take comfort that the logic of the printing press example must assert itself, and sufficient injections of money will ultimately always reverse a deflation."

THE DAY AFTER TOMORROW--The sight of hordes of Americans wading across the Rio Grande into Mexico, on the other hand, has a piquant quality.... CLICK NOW

What are "LIARS LOANS?"---
Fannie Mae and Freddie Mac

....in the black hole supernova of internal domestic demolition of billions and billions of taxpayers dollars lost forever in giving easy home mortgage loans to illegal immigrants to bolster U.S. housing and auto loan and sales markets for nearly ten years now!!! Yep ... it's all true!

Sept. 1, 2005 -- Paul Krugman, NY Times, on ARM home mortgage loans and the imminent explosion of the toy bubble economy, owned by the Chinese holding our T-bonds:

"These days Mr. Greenspan expresses concern about the financial risks created by "the prevalence of interest-only loans and the introduction of more-exotic forms of adjustable-rate mortgages [ARMs]." But last year he encouraged families to take on those very risks, touting the advantages of adjustable-rate mortgages [ARMs] and declaring that "American consumers might benefit if lenders provided greater mortgage product alternatives to the traditional fixed-rate mortgage."

If Mr. Greenspan had said two years ago what he's saying now, people might have borrowed less and bought more wisely. But he didn't, and now it's too late. There are signs that the housing market either has peaked already or soon will. And it will be up to Mr. Greenspan's successor to manage the bubble's aftermath.

How bad will that aftermath be? The U.S. economy is currently suffering from twin imbalances. On one side, domestic spending is swollen by the housing bubble, which has led both to a huge surge in construction and to high consumer spending, as people extract equity from their homes. On the other side, we have a huge trade deficit, which we cover by selling bonds to foreigners. As I like to say, these days Americans make a living by selling each other houses, paid for with money borrowed from China.

One way or another, the economy will eventually eliminate both imbalances. But if the process doesn't go smoothly - if, in particular, the housing bubble bursts before the trade deficit shrinks - we're going to have an economic slowdown, and possibly a recession. In fact, a growing number of economists are using the "R" word for 2006.

And here's where Mr. Greenspan is still saying foolish things. In his closing remarks he suggested that "an end to the housing boom could induce a significant rise in the personal saving rate, a decline in

imports and a corresponding improvement in the current account deficit." Translation, I think: the end of the housing bubble will automatically cure the trade deficit, too.

Sorry, but no. A housing slowdown will lead to the loss of many jobs in construction and service industries but won't have much direct effect on the trade deficit. So those jobs won't be replaced by new jobs elsewhere until and unless something else, like a plunge in the value of the dollar, makes U.S. goods more competitive on world markets, leading to higher exports and lower imports.

So there's a rough ride ahead for the U.S. economy. And it's partly Mr. Greenspan's fault."

E-mail: krugman@nytimes.com

The Adrian Report on Illegal Immigration -- many Liberals are dead set against "illegal immigration" as well as Republicans !! It has crushed our unions and shredded our labor advantages built up over a century ....

How to interpret our Senate & House legislation the past ten years---'illegal litering' means "THROW IT DOWN ON THE GROUND AND JUMP FOR JOY!"
Premise: We can all disobey basic traffic laws on our highways as "illegal drivers" and ignore litter laws in our parks and City Halls now since our Congress and law enforcement agencies and courts do not take "illegal immigrants" seriously either. Join in the national emancipation and celebrate the meaningless of the word ILLEGAL in American law, courts, and enforcement! Drive as you please and litter to your guts delight, we are all ILLEGALS!

NEWS FLASH---"How Wall Street Wrecked Nearly All of Our PENSIONS!

We must ALL exploit these wonderful liberties!

TODAY'S MOTTO: "If you want that job, forget it, it is the job EVERYBODY wants --but it will surely go to an illegal immigrant while you rot....in a homeless shelter"

Immigration Invasion Costs

Hugo Salinas Price -- president of the Mexican Civic Association Pro Silver Movement. Since the peso crisis of 1995, Salinas Price and other outspoken peers have dedicated themselves to spreading the word about real money. For 35 years, Salinas Price was CEO of Elektra-Mexico. Under his leadership, Elektra grew from being a small electronics store into a publicly traded behemoth with over 600 stores nationwide. His work is represented in both English and Spanish here.

FREDDIE AND FANNY---they in big doodoo! Home Mortgage Loans to Illegal Immigrants ain't Constitutional....

===>>> Fanny Mae and Freddie Mac going bankrupt [they are both federally subsidized to the tune of near $25 BILLION dollars annually] due to Bank of America [and many other banks too] home mortgage loans to illegal immigrants, a blatant federal offense [illegal too, like the recipients of the loans themselves are illegally here] and is a main cause of the lethal hemmorhaging of your tax billions... click here and learn!

...even Alan Greenspan woke up and is alarmed! ... click here for the ties betweeen illegal immigrant home mortgages and Freddie Mac and Fannie Mae!

The DC Examiner's Michael Gerber reports on April 21, 2005, that the Senate Banking Committee determined at this week's meeting that the crisis of the Freddie Mac and Fannie Mae and the Federal Home Loan Banks has reached epic proportions, that the Freddie and Fannie are on the brink of bankruptcy, and that Freddie Mac alone spends more on lobbying than even the Zionist AIPAC lobby [found in court this week also to have planted a spy in our Pentagon at a high level--Lawrence A. Franklin] ... to the tune of OVER $13.5 million dollars to manipulate legislation and mortgage bank loan enforcement laws -- Tom Delay is on the roster of the lobbyists for the top lobbying firms representing Freddie Mac.

click here for IMMIGRATION POLITICS IN GERMANY

Vincente Fox, dictator of Mexico not too long ago declared, "...us Mexicans only take the jobs that not even Blacks want to do." When did the African-Americans and the laid off factory workers and laborers and the engineers shafted by Indians and Chinese with H1-B visas and who are all out in the streets begging for food cause their ain't even welfare benefits no more when you are out of luck, when did all us natives get placed WAY BEHIND illegal immigrants in jobs and payouts?????? Why?

Why does the Library of Congress use illegal immigrants contracted out of New Jersey and Baltimore to do the janitorial work of Congress's Library!?????

WE MUST OUTSOURCE THE PRESIDENT AND OUR IMPOTENT CONGRESS ---JUST THE SAME VILE TREATMENT AS OUR OWN WORKERS DAILY RECEIVE --- ONTO A DEAD-SLOW RIVERBOAT TO CENTRAL CHINA, PREFERRABLY MONGOLIA!!!!!!!!!!

** [C] ... click here for How U.S. soldiers are bravely defending themselves and their families and homes from the burning flames of loan gouging attacks on them which are approved by the VA and Congress -- our White House Staff on their bloated butts look the other way and turn their fatty faces towards their million-dollar-baby, their well buttered life long pensions, if for serving only one term too ...

Need a social security number? 60-Minutes shows you how.... click on photos above!

...Illegal immigration is bad, bad, bad, for everyone.

*It enslaves those illegals with low wages, poor living conditions, and no working rights.

*It drives down wages for low income Americans who are forced to "compete".

*It depletes our revenues providing healthcare, and social services, and education to illegals.

*It increases our vulnerability to attack to maintain porous borders, intentionally!

*It makes a mockery of our laws. If we are a nation of laws, good ones and bad ones, we must be duty bound to uphold them, and change them if need be but not to break them!

We ought to have a comprehensive program to stop illegal immigration, including massive border security and SUBSTANTIVE/PAINFUL/PROHIBITIVE fines for employers hiring illegals. And we must have an effective and policeable immigration and worker program ... for more, click on top paragraph!

Tens of millions of Americans do not have work enough to even feel sub-human, and so they have to stretch five or six credit cards to house and feed themselves and their families ... without this credit, the unemployment figures in the Dept. of Labor would CATAPULT into the low to mid 20 percentile [22%-24%]and our social services agencies would be swamped with legal residents begging for assistance. Now the Congress has striken their salvation from this avoidable dog house -- with just one damning presidential signature this week these rights --from the very few left for legal residents -- were swiftly obliterated

... our soldiers [many reservists] earn around minimum wage over there in old Babylonia, and with their 'illegally' overextended combat terms, some are on their FOURTH term in Iraq and Afghanistan, are in huge debt and ....their families back home are near or in foreclosure proceedings [Reservists] and lacking healthcare and medication ... they are being bilked also by Congress-approved shark loans for vets at astronomical fees that our Congressrats just tend to snicker about ... click above for more.

Neither Democrats nor Republicans have been honest for over a decade and a half about ILLEGAL IMMIGRATION. The big corporations love it for cheap third world labor here at home without having to OUTSOURCE to India [nor do they have to build extra superfactories in China for U.S. over-consumption in addition to the many they have over there already] ... and the Democrats dig illegal immigration for easy and dicey free-style votes for themselves and for illegally abetting SMALL BUSINESS OWNERS who vote for them, like the oyster farmers in Chesapeake Bay, MD, who should not even be in business if they can't pay their hillbilly nephews and nieces enough to farm oysters [but they are truly the LEAST of our worries over businesses hiring illegal immigrants... Both sides of the House have been selling out the nation

much more than her for well over a decade, BOTH Parties! Time to do something about it? You bet!!

If illegal immigrants can work here so freely in the USA during our worse economy since the Great Depression [we have been bleeding trillions to the Chinese/Japanese in foreign debts for two decades and nearing another trillion wasted as it is dumped into the Afghan-Iraq-Oil-Grab Wars], and during a war with no domestic war production economy, and scarcely a one or a two of all of us tens of millions of unemployed and part time halfass-employed is ever PICKED OVER the illegals, even when we JUMP in front of them in the HIRING LINE!, ... these illegal scofflaws with 'no banking rights' can get... ... DRIVER'S LICENSES [click here] thanks to the car insurance lobby and car manufacturer's lobby, and our unions are weaker than just one solitary decapitated maggot that can and will do NADA to help union members and the rest of us nor resist the third world breakdown of all our centuries old already fought for labor standards .... so, why do we have to conform to our other laws, bro??

We should all worship the throne of illegalities ---such as littering, jaywalking, hunting out of season, spitting in public, swilling beer in front of city hall, driving like we always wanted to but were afraid to break the law, and/or just not friggin paying taxes, perhaps to start carrying small weapons for self-protection even though there are knife and gun laws, etc. We should just scoff at these laws and follow the precedent of the illegal immigrants, then it all makes sense in the kind of democracy our Senators and CongressMouses are setting up for us in our Houses! Let's all drink cans of beer on the Senate steps my brethern, to show them our approval!

We must ALL exploit these wonderful liberties!

How Walmart is at the cutting edge of illegal immigrant labor! ... click here

** [A] ....click here for complete story on how our Iraq War related military families share their struggles of paying the bills, fighting off foreclosures and creditors and bad congressionally approved veterans loans, and finding adequate health care with no insurance....

** [B] ...click here for legal citizens aka African Americans reaction to the new GW inspired NO BANKRUPTCY law for the impoverished --that just swept through both sides of the House, with Deomcrats and Neo-Cons cheering as they hold hands with their blushing fatcat lobbyists!

** [C] ... click here for How U.S. soldiers are bravely defending themselves and their families and homes from the burning flames of loan gouging attacks on them which are approved by the VA and Congress -- our White House Staff on their bloated butts look the other way and turn their fatty faces towards their million dollar baby a year, life long pensions, for serving only one term...

"When you can't understand the teacher -- A North Dakota bill asking colleges to assess the English skills of teaching assistants kicks up a storm of controversy"

By Stacy A. Teicher | Staff writer of The Christian Science Monitor

When Bette Grande heard her son and his friends complain that they couldn't understand their foreign-born teaching assistants, she urged them to sit in the front row. But when she talked with other undergraduates at North Dakota universities, she decided that might not be enough.

"The students ... were pretty much just being brushed off, or were told it was up to them to accept the diversity ... or listen harder," she says. There ought to be a law, she thought. And as a state representative from Fargo, Ms. Grande could help make that happen. The new law, signed in March, requires the State Board of Higher Education to create a policy assessing the English-speaking skills of faculty and teaching assistants (TAs). Students are also to be notified about how complaints can be filed and resolved.

But Grande's original bill stirred up more controversy than she expected. She says her goal always included giving more support to international TAs, but her proposal would have removed them from teaching roles if 10 percent of their class complained that they didn't speak clearly. That set off alarm bells for some academics, since research has shown that student evaluations aren't necessarily reliable measures of a teacher's effectiveness.

It also touched a nerve because it seemed to have a punitive tone. Yes, some university officials responded, students should be able to understand instructors, but communication is a two-way street.

"We live in a global economy ... and here in North Dakota, we've been doing better [in recent years] at being able to create diversity, and perhaps this is just one of the growing pains," says R. Craig Schnell, North Dakota State University's provost and vice president for academic affairs. He's heard from number of students who said they were able to work through initial communication barriers with foreign TAs and ended up really enjoying their classes.

The university already has a policy, because lawmakers also pushed this issue in the early 1990s. The only change, Mr. Schnell says, is that he'll have to keep better records and report to the state. In the past 10 years, he estimates only about 10 complaints have reached him. But he acknowledges some students may not know how to register their concern. He's planning to involve the student government in creating and publicizing a new system for investigating complaints.

The 7030 sync is a bit more versitile that that on the R8B. You can even do DSB reception, or any mixture of LSB and USB. It's hard to explain unless you have used one. However, the Drake gives you more bang for the buck, especially with the weak dollar.

We did the test during the day, which is pretty difficult for shortwave. The nice thing about the 7030 sync is it never growled during extreme fading.

sdaniel13@nyc.rr.com wrote:

Carl

Very good of you to sort through all this Off Topic Crap (guilty myself) and to get to the true meaning of the original message! Just check with the manual to make sure you're not entering automatic tuning mode. The 1102 is a wonderful little radio! There was, however, someone with the same problem on the 1102 list, and ended up deciding to return it. Check all options, return it if necessary, but try another one and you're results might be perfect.

More than enough. it is reasonably good protection for a transmitter,
and is likely to prevent your receiver from ending up as a smoking
pile of rubble, but the only effective front end protection is
disconnecting it.

The problem with a ground lug, is lightening has substantial Radio
Frequency components, so what you really want is a good RF ground,
In general ground lugs on outlets, and house wiring grounds are poor
RF grounds. they have substantial impedance to ground. You want a
conductor with huge surface area (braid), to another conductor with a
large surface area (copper water pipe)...

It was Radio Sofia then, as I recall, and it was a power house! Seemed as
strong here as Radio Moscow

You must have been testing the R8 or R8A against the 7030.
The R8B's sync detector is the best available outside of a Sherwood and it's performance and flexibility is simply superb.
It will lock onto a deep fade like a bulldog to a burglar and NEVER looses lock or growls.
It will even lock onto the signal if it is offset by the passband control, something the 7030 can't do.
I had the opportunity to put the Drake alongside the 7030 for over a month.
See my article at:

I have the 'A' and it's a terrific receiver, especially for weak signals.
The audio, as with all Drakes, is very good.

Actually, using the passband shift is essential to the operation of the
7030. Well whatever, I'm not going to get involved in these
discussions where people defend their hardware as they never end. We
did the shootout and the conclusions were pretty clear.
Incidentally, it was the 7030+NB, not that it should make a difference.

Hello.

Try this tomorrow night, indoors (in front of your window) with the whip antenna only.

Make sure your SSB control is "off."

Between 0100 - 0200 UTC (8 - 9 PM ET) tune to 6165 kHz (R. Nederland) and 11935 kHz (R. Japan). Both of these are relayed from the Netherlands Antilles.

Between 0200 - 0400 UTC (9 - 11 PM ET) tune to 5975 kHz (BBC). This is relayed from French Guiana.

If you cannot hear any of these, send your radio back for exchange (NOT "repair") as DOA. It is defective.

Best,

Joe

> Can you receive any of the time signals. Try 10K, 15K, etc

Only 3330 from Canada, and that is *extremely* static-filled. None of the other time signals come in. Not a single one from the US (5, 10, 15, 20)

Indeed you are correct. The X did lead to the wire crossing itself so - after smacking myself on the forehead - I rearranged it. I unfurled the reel and simply ran it from the upper left corner of my window, across the top and down the righthand side to my radio. The reception on 3330 - my test at the time - did improve slightly, but it remained nevertheless extremely static filled. Still none of the other time signals were received.

I've reread the manual a million times, rechecked the radio just as many and everything is absolutely as it should be.

Joe,

Extremely helpful advice, as is all the other discussion in this thread! Unfortunately I was out for most of the evening and didn't have an opportunity to test this. I will be at the window during these times tomorrow though.

On a seperate note, I should mention that each time that I've tested all of these myriad frequencies I have been thorough insofar as I have tested with every combination of antenna (built-in, reel and none) and also on both power from the wall as well as battery power - and yes, they were fresh.

The advice that I'm seeing here, though my problems are not yet resolved (many, many variables to test) is priceless and my thanks go to you all. I hope that others may be able to gain information from these messages as well.

Robert 11,

"IF" you have a Long Wire Antenna that is located OutSide then
you should look at those things that can be done OutSide to
improve your Antenna System from the effects of a nearby
Lightning Strike to your Antenna, Radio Equipment and possibly
your House.

1. An OutSide Remotely Located Ground far away form the House.

2. With a LongWire Antenna use a Matching Transformer (UnUn)
between the Wire Antenna Element and Ground; and the Coax
Cable Feed-in-Line.

3. Use a Coax Cable Feed-in-Line and bury it if possible.

4. Use an Antenna Switch between the Antenna's and the Radios
in the Shack. The type that lets you dixconnect the Antenna from
the Radios and Short the Antenna to Ground for Safety.
Note - Many of these Antenna Switches have GDT's built into them.
http://www.universal-radio.com/catalog/switch/2415.html

5. When you are not using your Radio and Antenna disconnect the
Coax Cable from the Matching Transformer outside the House.

"IF" you have a Long Wire Antenna that is located InSide
your House or Attic.

1.A Ensure that your House and Wiring meets the Standards
for your Area for Lightning Protection.

1.B. Improve your Shack Grounding and Electrical Sysyem
Bonding as best as you can.

2. With a LongWire Antenna use a Matching Transformer (UnUn)
between the Wire Antenna Element and Ground; and the Coax
Cable Feed-in-Line.

3. Use a Coax Cable Feed-in-Line between the Wire Antenna
Element and the Radio.

4. Use an Antenna Switch between the Antenna's and the Radios
in the Shack. The type that lets you dixconnect the Antenna from
the Radios and Short the Antenna to Ground for Safety.
Note - Many of these Antenna Switches have GDT's built into them.
http://www.universal-radio.com/catalog/switch/2415.html

5. When you are not using your Radio and Antenna disconnect the
Coax Cable from the Matching Transformer outside the House.

hope this helps - iane ~ RHF

Robert 11,

For a Long Wire {Random Wire }Antenna that is located OutSide
you should look at those things that can be done OutSide to
improve your Overall Antenna System from the effects of a nearby
Lightning Strike to your Antenna, Radio Equipment and possibly
your House.

1. Reverse the Lay-Out of your OutSide Random Wire Antenna.
[Feed the Antenna from the Far-End away from the House.]

2. Make the Antenna an Inverted "L" Antenna Fed at Ground Level
vice higher up-in-the-Air.

3. Use an OutSide Remotely Located Ground Rod far away from
the House at the base of the Vertical-Up-Leg of the Inverted "L".

4. With a Inverted "L" Antenna use a Matching Transformer (UnUn)
mounted on top of the Ground Rod : Between the Wire Antenna
Element and Ground; and the Coax Cable Feed-in-Line.

5. Use a Coax Cable Feed-in-Line and bury it if possible; directly
under the the horizontal-lay of the Wire Antenna Element.

4. Use an Antenna Switch between the Antenna's and the Radios
in the Shack. The type that lets you disconnect the Antenna from
the Radios and Short the Antenna to Ground for Safety.
Note - Many of these Antenna Switches have GDT's built into them.
http://www.universal-radio.com/catalog/switch/2415.html

5. When you are not using your Radio and Antenna disconnect the
Coax Cable from the Matching Transformer outside the House.

hope this helps - iane ~ RHF

From Capitol Hill Blue

The Rant
Bush on the Constitution: 'It's just a goddamned piece of paper'
By DOUG THOMPSON
Dec 9, 2005, 07:53

Last month, Republican Congressional leaders filed into the Oval Office to meet with President George W. Bush and talk about renewing the controversial USA Patriot Act.

Several provisions of the act, passed in the shell shocked period immediately following the 9/11 terrorist attacks, caused enough anger that liberal groups like the American Civil Liberties Union had joined forces with prominent conservatives like Phyllis Schlafly and Bob Barr to oppose renewal.

GOP leaders told Bush that his hardcore push to renew the more onerous provisions of the act could further alienate conservatives still mad at the President from his botched attempt to nominate White House Counsel Harriet Miers to the Supreme Court.

ï¿½I donï¿½t give a goddamn,ï¿½ Bush retorted. ï¿½Iï¿½m the President and the Commander-in-Chief. Do it my way.ï¿½

ï¿½Mr. President,ï¿½ one aide in the meeting said. ï¿½There is a valid case that the provisions in this law undermine the Constitution.ï¿½

ï¿½Stop throwing the Constitution in my face,ï¿½ Bush screamed back. ï¿½Itï¿½s just a goddamned piece of paper!ï¿½

Iï¿½ve talked to three people present for the meeting that day and they all confirm that the President of the United States called the Constitution ï¿½a goddamned piece of paper.ï¿½

And, to the Bush Administration, the Constitution of the United States is little more than toilet paper stained from all the shit that this group of power-mad despots have dumped on the freedoms that ï¿½goddamned piece of paperï¿½ used to guarantee.

Attorney General Alberto Gonzales, while still White House counsel, wrote that the ï¿½Constitution is an outdated document.ï¿½

Put aside, for a moment, political affiliation or personal beliefs. It doesnï¿½t matter if you are a Democrat, Republican or Independent. It doesnï¿½t matter if you support the invasion or Iraq or not. Despite our differences, the Constitution has stood for two centuries as the defining document of our government, the final source to determine ï¿½

in the end ï¿½ if something is legal or right.

Every federal official ï¿½ including the President ï¿½ who takes an oath of office swears to ï¿½uphold and defend the Constitution of the United States."

Supreme Court Justice Antonin Scalia says he cringes when someone calls the Constitution a ï¿½living document.ï¿½

ï¿½"Oh, how I hate the phrase we haveï¿½a 'living document,ï¿½ï¿½ Scalia says. ï¿½We now have a Constitution that means whatever we want it to mean. The Constitution is not a living organism, for Pete's sake.ï¿½

As a judge, Scalia says, ï¿½I don't have to prove that the Constitution is perfect; I just have to prove that it's better than anything else.ï¿½

President Bush has proposed seven amendments to the Constitution over the last five years, including a controversial amendment to define marriage as a ï¿½union between a man and woman.ï¿½ Members of Congress have proposed some 11,000 amendments over the last decade, ranging from repeal of the right to bear arms to a Constitutional ban on abortion.

Scalia says the danger of tinkering with the Constitution comes from a loss of rights.

ï¿½We can take away rights just as we can grant new ones,ï¿½ Scalia warns. ï¿½Don't think that it's a one-way street.ï¿½

And donï¿½t buy the White House hype that the USA Patriot Act is a necessary tool to fight terrorism. It is a dangerous law that infringes on the rights of every American citizen and, as one brave aide told President Bush, something that undermines the Constitution of the United States.

But why should Bush care? After all, the Constitution is just ï¿½a goddamned piece of paper.ï¿½

I dont know how much money that Yachboy radio cost and I think somebody said Amazon sells the Sony 7800 GR radios for about $129.00,a good price for a very good radio.What I would do is send the Yachboy radio back to the store for a refund and buy a Sony 7600 GR radio.(whenever you buy something like that,always save the box and packing materials and of course your sales receipt for at least a month or two in case the product might be defective and you might need to send it back for a refund) Then you would have a much better radio.Only my opinion.

I always liked those kites that spin like a wheel in the wind.During
World War Two in Switzerland,some of those people over there used Helium
filled Balloons to get their Antennas high up in the Air.They had large
homemade reels so they could let the Balloons (with the wire Antennas)
get high up into the air and when they were through using the Balloons
for a while,they would reel them back down to ground level and hide the
Balloons in their homes.

Hi Pete:
The previously mentioned suggestion of taking the radio outside for a walk is an excellent tip. This is how I achieve the best reception.

What exactly are you hearing when you step through the 49m or 31m bands at night? Any faint voices? What kind of noise?

A good test signal for you since you're in the USA is the WWV (http://tf.nist.gov/timefreq/stations/wwv.html) broadcasts on 2.5 mhz, 5 mhz, 10 mhz, 15 mhz, and 20 mhz. 5 mhz is the most reliable for me in the evening (over here in northern California). Use the daytime/nighttime recommendations in your radio manual to determine which frequency is best at any given time.

For very up-to-date shortwave frequency listings, give www.primetimeshortwave.com a try. You'll have to learn how to convert local time to coordinated universal time (aka UTC). Search for listings labeled "NA" (North America), although reception of stations broadcasting to other regions is possible.

One of my favorite broadcasts is Radio Havana Cuba:
0500-0700 UTC: 6 mhz, 6.06 mhz, 9.55 mhz, 9.82 mhz, 11.76 mhz

Definition of a troll:

In Internet terminology, a troll is a person who posts inflammatory messages on the internet, such as on online discussion forums, to disrupt discussion or to upset its participants. "Troll" can also mean the inflammatory message itself posted by a troll or be a verb meaning to post such messages. "Trolling" (the gerund) is also commonly used to describe the activity.

Disruptive trolls
Off topic messages: Those that are irrelevant to the focus of the forum.
Page widening: Filling up fields with large pictures or characters to make previous posts unreadable.
Offensive media: Annoying sound files or disturbing pictures in a message, or linking to shock sites that contain such media. Often these links are disguised as legitimate links.
Inflammatory messages, including racist comments.
Deliberately revealing the ending of a recent popular movie or book.
Bumping an old discussion, or rehashing a highly controversial past topic, particularly in smaller online communities.
Deliberate and repeated misspelling of other people's nicks in order to disturb or irritate them in a conversation.
[edit]
Attention-seeking trolls
This class of trolls seeks to obtain as many responses as possible and to absorb a disproportionate amount of the collective attention span.

Advertising another forum, especially a rival or a hated forum.
Messages containing an obvious flaw or error: "I think 2001: A Space Odyssey is Roman Polanski's best movie."
Asking for help with an implausable task or problem "How do I season my Crock Pot? I don't want everything cooked in it to taste the same."
Intentionally naive questions: "Can I use olive oil instead of water, when cooking pasta?"
Messages containing a self referential appeals to status. "Evian is

bottled water for white trash. I prefer Dasani water imported from Italy."
Intentionally posting an outrageous argument, deliberately constructed around a fundamental but obfuscated flaw or error. Often the poster will become defensive when the argument is refuted, but may instead continue the thread through the use of further flawed arguments; this is referred to as "feeding" the troll.
A subclass of the above is the flawed proof of an important unsolved mathematical problem or impossibility (e.g. 1 = 2); however, these may not always be troll-posts, and are sometimes, at least, mathematically interesting.
Politically contentious messages: "I think George W. Bush is the best/worst President ever."
Posting politically sensitive images in inappropriate places.
Pretending to be innocent, after a flamewar ensues.
Off-topic complaints about personal life, or threats of suicide: sometimes, this is the "cry for help" troll.
Plural or paranoid answers to personal opinions expressed by individuals: "I don't believe that all of you really believe that, you are teaming against me."
Paramour trolls get a thrill from establishing serial online affairs with females of a group. This incites public rivalry among the women who once thought the nicknames, poetry, love statements were exclusive to them. Since the online love affair is developed separately in chat programs, it takes a long time for the online cat-fight to be detected.

Any combination of the above: For example, a troll will combine inflammatory statements with poor grammar and AIM-speak (which is also known as "netspeak" or "chatspeak"). "lmfao u are so weak minded and predictablei thought i wan iggied i play ya like a card"
[edit]
Other Examples
Some trolls may denounce a particular religion in a religion newsgroup, though historically, this would have been called "flamebait". Like those who engage in flaming, self-proclaimed or alleged internet trolls sometimes resort to innuendoes or misdirections in the pursuit of their objectives.

A variant of the second variety (inflammatory messages) involves posting content obviously severely contradictory to the (stated or unstated) focus of the group or forum; for example, posting cat meat recipes on a pet lovers forum, posting evolutionary theory on a creationist forum (or vice versa), or posting messages about how all dragons are boring in the USENET group alt.fan.dragons.

The "sock puppet" troll often enters a forum using several different identities. As postings from one identity attract increasingly critical comment from other forum members, the troll enters the forum using a second identity in support of the first. The troll may even use postings from the second identity to criticise those from the first in order to develop credibility on the forum.

Cross-posting is a popular method of choice by Usenet trolls: a cross-posted article can be discussed simultaneously in several unrelated and/or opposing newsgroups; this is likely to result in a flame war. For instance, an anti-fast food flame bait might be cross-posted to healthy eating groups, environmentalist groups, animal rights groups, as well as a totally off-topic artificial intelligence newsgroup.

An example of a successful troll is the well-known "Oh how I envy American students" USENET thread which had 3,000-odd follow-ups. A new USENET newsgroup, "alt.genius.bill-palmer", was created by Igor Chudov for the purpose of creating an outlet for discussing a controversial USENET personality, Bill Palmer, himself an alleged USENET troll who managed to make his personality the center of all discussions. A swirl of messages attempting to disprove his alleged status as genius, cross-posted to hell and back, made "a.g.b-p", the most popular new "alt.*" newsgroup of the year. Its creator was nominated for the "Troll of the Year 1996" award.

You need to be right on frequency for a sync detector to operate
optimally, which would be important for weak signals or signals that
are fading deeply. For strong signals you just need to be close. Maybe
some peoples experience is colored by not being right on the stations
frequency. Most broadcasters are right on frequency but some are not
and for best performance you should zero beat them first and then sync
to the station. Sync performance varies between radios under tough
conditions.

I see someone else wrote the above and responding to the comment that
the 7030+ sync is more flexible than the Drake R8B is wrong. The Drake
has selectable sideband sync and the 7030+ does not have this function.
Both radios have sync and you can adjust the passband on both but only
the Drake can sync to one sideband or the other. The result is the
blocking is better on the Drake since you can move the passband and
select the side band with the least interference.

Hard to say, but the guy is in Kentucky, and does seem to use similar wording.

Though IIRC, someone else a while back had some radio stuff to sell, and not knowing any better, decided to make his listings look like RM ones because he gets top dollar for his stuff.

One notable difference is the auction was clearly missing a profit center by offering "free shipping".

The basic premise of the story isn't credible.

Why would the White House officially deny a screwball claim like this?

As it stands now, relatively few people are even aware of this
fabrication. Most of the ones who believe the story would believe
anything critical of President Bush no matter how far fetched it is, and
they'd summarily reject a denial.

If the President responds, he creates a news story, and gives the web
site free publicity.

Well, you did imply that the reason the "Italians and Englishmen" were
"yelling at Arabs in Australia" was "for not being from there" and not
for anything more serious, like church burning and firing into children's
choirs.

I've owned a stock IC-R75 and one with "ALL" the Kiwa modifications. In it's stock form, the synchronous detector is non-functional and the agc on am stinks. If all you do is listen to utilities, it is ok in its stock form.

But, if you listen to shortwave broadcast stations and or medium wave, get the kiwa mods. The Kiwa 3.7/3.8 filter is great for dx'ing and the sync mod works very well. Add a good external speaker such as the Radio Shack Minimus 7 and you have an excellent receiver. The Icom dc power supply runs warm and provides way too much voltage too. Might want to use a "Real" 12 volt dc supply.

YMMV

> The previously mentioned suggestion of taking the radio outside for a
> walk is an excellent tip. This is how I achieve the best reception.

Thanks for the tip. I did indeed take it outdoors - out on a pier into the lake - and the change in reception was hardly noticeable. Then for safe keeping I drove quite a distance outside of town to the middle-of-nowhere VT - no mountians, no woods, just a big open field - with the same results.

> What exactly are you hearing when you step through the 49m or 31m bands
> at night? Any faint voices? What kind of noise?

31m - nothing. 49m - occasional extremely static-filled voices. Absolutely nothing that would be considered intelligible.

> A good test signal for you since you're in the USA is the WWV
> (http://tf.nist.gov/timefreq/stations/wwv.html) broadcasts on 2.5 mhz,
> 5 mhz, 10 mhz, 15 mhz, and 20 mhz. 5 mhz is the most reliable for me
> in the evening (over here in northern California).

Historically I don't receive any of them, though this afternoon I just barely received the 20mhz broadcast - but again, completely filled with static and almost unable to be heard.

I do get the 3330 time broadcast from Canada, but it too is not exactly well received.

> One of my favorite broadcasts is Radio Havana Cuba:
> 0500-0700 UTC: 6 mhz, 6.06 mhz, 9.55 mhz, 9.82 mhz, 11.76 mhz

I suspect that would be one of my favorites as well. ;-) Unfortunately I have tried and tried - those seem to be common hours for me to be trying - and have not been able to get it.

Spoke with Grundig tech support today and they didn't have too much too offer. Very nice people, to their credit, but because of all the variables involved they were unable to say if it sounds more like a receiver hardware problem or just general reception issues. I'm going to continue testing this evening.

Due to the return policy of the company it was ordered from (universal radio) I need to decide quickly if I'll be returning/exchanging it. The question that comes up is that, if I do exchange it, would I be better off upgrading to a different radio? Aesthetic appeal aside, the Eton E1 seems to have good reviews everywhere. But is the difference in sensitivity enough to justify the extra money?

I'm also interested in, eventually, tracking down some of the SSB traffic around my area. I have an international airport down the road, coast guard virtually next door and a city full of people. The YB isn't picking up anything there either when in SSB mode, but then, it got poor reviews on that aspect. Would the E1 be any better?

Regarding the international airport, your interest would be in international air traffic control, which does use HF. You can google around for MWARA frequencies. I have them for the left coast. I haven't tune them in ages, but will do so tonight for the hell of it. It's like air traffic control, but the pace is much slower since there isn't that much traffic.

I have the older Sony 7600. It works fine on shortwave broadcast. The VFO resolution isn't fine enough for sideband, though it does have a analog control to tweak it in (clarifier).

If you expect to do sideband, you need a radio with two filter bandwidths (at the very least). Using the wide filter for AM lets too much noise through on sideband.

Well, looks like, after speaking with some folks on the phone and
reading more online, that the E1 wouldn't necessarily be any better.
Looks pretty, of course, but seems like the extra cost is due to the XM
capability.

Still testing the YB.

Try a descent antenna ... probably a clip-on wire antenna would work
well enough until your skill improves and you graduate to something

more sophisticated.

The XM capability only adds a few dollars (less than 5) to the cost of
the radio. The XM smart antenna option for $50 has the actual
satellite receiver on it. The E1 itself is just the human interface.

< Snip >

If you are outside away from big buildings as an example in a park tune
in a local AM broadcast station and set the radio to a reasonable
listening level. Around sunset your time switch to a SW band 49 meters,
which is 5900 kHz to 6200 kHz. The radio should have a low volume
static hiss unless you are on a SW station. Tune through that frequency
range and you should get at least several stations clearly. This band
at this time of day usually has the strongest stations you are likely
to receive. Conditions are good today so you should pick a number of
stations up. If not the radio may have a problem.

What I meant was that the XM-ready nature of the E1, actual XM hardware costs aside, is what makes this radio so significantly more expensive than some of the other high-end portables. My research seemed to indicate that the E1 wouldn't offer significantly better reception on the SW bands than the YB 400PE, so for a difference of $350+ it's not a worthwhile investment.

Please do correct me if I'm wrong, but that's what I came to undertand.

Progress!

Thanks go to Telamon for posting a timely message. I grabbed my radio and went out into the park. Not hard to do, as I live essentially in one. I walked between 50 and 100 yards into the middle of the park, sat down on a bench and fired up the radio. I tooled around the 49m band as Telamon suggested and I'm pleased to report that the results were extremely encouraging. Not sure why I wasn't having better results the other night when I was miles away from nowhere...

I've recorded the success below, with a small "key" to indicate exactly what I mean by my terms.

Telamon, you mention the static hiss which you say should go away when I tune into a sw station. The hiss and static has never in any of my tests, including this one, gone away. I'm not sure if this is normal or not, but as some people actually listen to music via sw, I'd have to say that either it should if the signal is strong enough else those users have a strong tolerance of poor quality music signals. When people talk about strong, clear signals and reception, are they in fact indicating that there is no static?

Okay, here it goes. This was 6:16 to 6:46pm local time (EST), so not "too" long after sunset.

****

TIME: 23:16 to 23:46 UTC

CLEAR = strong voices, no distortion or interference (always some static)
OKAY = decent, intelligible voices with significant static
BORDERLINE = heavy static, able to ocassionally hear clear voices but majority is not clear enough to be understood.
NOTHING = complete unintelligible static

FREQ OUTSIDE INSIDE
5950 clear okay
5960 okay nothing
5975 okay borderline to nothing
5990 borderline borderline to nothing
6000 clear okay to borderline
6030 okay to borderline nothing
6055 okay borderline to nothing
6075 borderline nothing
6090 okay to borderline borderline to nothing
6165 clear borderline to nothing

Outside I was using nothing but the whip antenna. Inside, I have a reel antenna.

I have yet to look up the frequencies to see what I caught. There were also several frequencies that the auto tuner decided to stop on, though there was nothing to be heard. I did not record these here.

It was a two week turn around, I had all the mods done, including the
more extensive mw mod. I use mine with a Quantum QX Pro Loop and it is
a fantastic mw/sw receiver.

The good news is you made a step in the right direction and you are picking some stations up.

The bad news is that you listened at a time and band that should have provided the strongest signals you can encounter and the result was kind of weak. Conditions have been good tonight so I expected that you should have done better.

You have probably become aware by now that listening to SW takes a little more effort and that it can be inconsistent as signals reflect or refract off the ionosphere above and that is affected by the time of day because of the sun lights ionizing effect, which then also varies according to the season just like the amount of daylight hours varies. In addition SW broadcasters only transmit to where you live at certain times. You can listen to signals beamed to other areas of the world but they are generally weaker.

Portable SW radios generally do well with only the strongest signals and you need to help them to do better. I believe that the YB-400 comes with an external plug-in antenna. If not you will need to get one. Sitting in the park if you tune to a marginal signal then plugging in the external wire should improve it. You will have to work with your listening situation a little more to get better results.

Assessing your results so far I don't know what you were listening to on 5950 as I don't see a strong signal to your area at that time. In Passport. That does not mean that things have not changed but you need to listen long enough to identify the station as local strong AM broadcast stations can over load your radio and show up in the SW bands.

The fact that 5960 has nothing means you found a locally electrically quiet place to listen.

5975 should have had the BBC on it and it should have been good reception.

6160 if you had waited a little longer 6160 should have had a good signal from radio Netherlands.

One tip here is that your radio has a sensitivity switch on the side. For SW you will probably want that switch to be in the "DX" position. If that switch is in the local position that will cause the radio to be insensitive and you will not hear much on it.

Well, you need to make another try at this.

1. Try for the "10 easy catches" again in passport.

2. Listen for a station that the guide indicates is strong or easy.

3. Pay attention that this signal you are listening for is beamed to your area of the world.

4. The frequency of the signal.

5. The time of the signal.

6. Time to try is around sun set or later time paying attention to the time and frequency of the guide. The band would be 49 or 31 meter.

7. Your location is in the park again.

8. Use the external plug-in antenna. String this antenna off the ground by hanging the end off a tree or bush near a bench.

9. Make sure the switches on the sides of the radio are set to "DX" not local and the switch next to it is "wide." On the other side of the radio the SSB switch should be "OFF."

Once you have picked up a station well and listened long enough to it so you can identify it as being the right station then you can experiment a little. Lets say you listen to 6165 from 00:00 to 01:00 UTC. You should get radio Netherlands in english.

Lets say that you are getting a SW station clearly and it does not have static noise in the background. Flipping the switch to local position may make it disappear or make it noisy. Disconnecting the external antenna may do the same thing. In any event once you tune in some stations successfully you can try the radio controls in order to understand their effect on reception. Once you are successful in the park then you can try your apartment again with the external antenna across a window. Chance are you will get more local noise than in the park and it will be harder to hear a SW signal as well as in the park.

Basically if you can get a AM broadcast station well in your apartment then the chance of getting a SW station well in your apartment improve.

Most stations ID around the hour and half hour times. They will usually tell you what other frequencies they are on and the time. Hopefully you will be able to ID them and again in your apartment you can then try disconnecting the external antenna wire and see what a difference than makes. You can also try flipping the switch on the side to local and hear the difference than makes.

Generally you need to pay attention to the guide where it indicates that the signal is beamed to your area at what frequency and time. This guide is written for the world so you need to pay attention to the time and frequency for where you live.

David, I understand that there may be many "features" that the E1 has that the YB-400 is lacking, but are you saying that at the very core of the reception issue, the E1 would outperform the YB-400. Out of the box, if I were to put an E1 next to my YB-400 with the same reel antenna or a 30ft long wire, would the E1 grab more signals and grab them more clearly?

As you have undoubtedly read, I don't get even the strongest BBC signals in the park away from all interference on a good night with the current YB-400. Do you think I would with the E1?

It was very encouraging, but now I'm back on the fence of the radio problem vs. reception problem issue. I was beginning to swing towards the radio problem side of things seeing as how I haven't been able to get even the strongest signals.

> The bad news is that you listened at a time and band that should have
> provided the strongest signals you can encounter and the result was
> kind of weak. Conditions have been good tonight so I expected that you
> should have done better.

And likewise, I too was hoping that it would have been better. There are simply too many variables to easily pinpoint the issue.

> You have probably become aware by now that listening to SW takes a
> little more effort

No doubt, though I suspected that. I must confess that it's been fun trying to ascertain the problem, but it would be oh so more delightful if I new that I wasn't dealing with a defective radio - both the manufacturer and the retailer are unwilling to make a call one way or another. I would have infinitely more energy in trying to hunt down stations and hatch elaborate antenna plans if I new that there was definately a possibility of a positive outcome. As it stands, I may be trying to start a car with no engine - all the while worrying about the path I'm going to travel.

> Assessing your results so far I don't know what you were listening to

I couldn't find anything either, be it in Passport or on the web, and that left me a bit confused. Your suggestion that it's an AM station sounds like a strong possibility, as it consistently gives me better signal than anything else.

> 5975 should have had the BBC on it and it should have been good
> reception.

Argh! You see, this is what is starting to rub me the wrong way. I'm having trouble with even the biggies. How could I possibly hope to find anything more exotic...

> 6160 if you had waited a little longer 6160 should have had a good
> signal from radio Netherlands.

I should have checked the schedule. :-(

> One tip here is that your radio has a sensitivity switch on the side.
> For SW you will probably want that switch to be in the "DX" position.
> If that switch is in the local position that will cause the radio to be
> insensitive and you will not hear much on it.

All of the switches - DX/LOCAL, WIDE/NARROW and SSB On or Off are set as they should be. DX, WIDE and OFF.

> Well, you need to make another try at this.

Indeed. And I will be taking your 9 point checklist with me. I'm not going to sleep - and that's probably meant literally - until this is solved.

> Basically if you can get a AM broadcast station well in your apartment
> then the chance of getting a SW station well in your apartment improve.

That's just it, the AM stations do in fact come in well in the apartment. I've just retested to be certain, and even without the reel antenna there are a million of them that come in strong and crystal clear - as I would hope that some sw stations would eventually come in. Is this indicative of anything?

The work continues. And thank you for your help in all of this.

I suggest you buy another YB-400 from a store that will let you return it for a full refund. Use a credit card so you don't have to pay for it immediately. When you get the second YB-400, compare it to the one you have now. This will give you a definate answer to the shortwave reception problems.

The SW8 was the first Drake to have the SSB (selectable side-band) sync' detector which was later used on the SW2 and R8B. The DSB (double side-band) sync' on the original R8 did not stay locked as well as the 'B' version. I don't know about the R8-'A' DSB sync' since I never had that model.

Pete...

Send the radio to Universal, tell them you believe the radio is defective and have it checked or just exchange it. If you exchange it, ask them if they will test the new unit before they send it to you. I don't know if they'll test a new one out of the box like I suggested but they should. Universal will exchange the radio for you if it is defective I believe within 30 days with no penalty. A Sony 7600 may be available from them for about the same money and even though I have not played with one, I've heard a lot of good things about it. It also has a sync detector on it which will help with AM broadcasts.

Keep in mind that the best radio in the world won't make up for a bad reception area or a bad antenna. The worst radio with the best antenna will be better than the best radio with the worst antenna. Think of it like this.... What will a $4000 stereo receiver sound like with $50 speakers? Maybe I'm elaborating too much but my point is that the antenna is the key.

Just for kicks I picked up my Yaesu VX 5
http://www.universal-radio.com/catalog/ht/1795.html
(a very small handheld radio/transmitter) which tunes basically from the AM broadcast band up through the shortwave bands and well beyond the UHF band. It is also a transmitter. The antenna that I have on it currently is about a 1.5 foot long whip cut for roughly 146 megahertz. It is "electrically" way, way, way too short for shortwave listening. However, tuning through it now I pick up some far away stations in Europe and parts unknown. I hear this as I sit surrounded by all sorts of interference generating devices in my second story bedroom. This is less ideal than any scenario you have described thus far and it is for this reason that I believe you may have a bad radio. It happens sometimes. Again, I'm not sure what city you live in but maybe there is someone that is on here that lives nearby that could assist you. I would be more than happy to but I am in Texas and it's just a little bit too far away from me.

Another suggestion is to see if there are any ham radio stores in the area you could take the radio by and have them give it a look. Personally I would contact Universal Radio before your time runs out.

Please don't give up!

Put the radio next to an analog TV. Tune from 4 to 10 megaHertz. You
should get all manner of buzzes and whistles. Good and loud.

Tune to an empty spot on the MW band around 600 kiloHertz. Then take
an infrared remote controller (cable, VCR, whatever) and operate it
near the top of the radio. You should hear Buck Rogers machine gun
sounds.

What your google search shows is lots of leftists have been posting the article on activist web sites.

Change the search to a search for a phrase instead of just a collection of words, and subtract results with the phrase "capitol hill blue" and you get 40 hits, and none are about President Bush.

Repeating a fabricated story doesn't make it true.

If you want to use it as a portable, I'd go for the 909. If you want to use it mostly in one location, I'd go for the ten tec.

Otherwise, I've seen some mixed reviews on the radio labs version of the 909, and I don't recall seeing anything but positive reviews of the 320.

2574. Re: Kiwa mods for R75

Hi Les

I also own a Icom R75 but I added some extra filters to it. I added a pair of 2.8's {FL-96 and FL-103} so they would match up instead of the one more expensive 3.3 FL-257.

I got the 2.8's for ECSS and for the cheaper price plus I read from people who bought both the 2.8 and 3.3 told me the 3.3 was just too wide and let too much carrier noise thru. Also, they said you couldn't really tell that big of a difference between the 2.8 and the 3.3 for the money.

So, with what I have now, do you think I would really benefit from the added Kiwa 3.7/3.8 filter? I listen to everything actually. BCB programs, Hams, and SW broadcasts if I can get them in good.

Do you think I should get the Kiwa filter added? I'm pretty content with what I have now but who knows what I might be missing out on?

You are well experienced with the R75 and would appreciate your pro opinion on this matter.

Thank you
Glenn

The dual 2.8 filters are the way to go if you tune using ECSS, I absolutely abhore using ECSS for sw broadcast listening, and that is my reason for using the Kiwa filter module. Of course, if I am looking for a heterodyne out of Pitcairn Island, I'll use USB or LSB and the narrow filters. YMMV, I use a Sherwood SE-3 MKIII and a Kiwa Map as I hate pinched audio. Of course, if I am just listening to a in the clear SW Broadcast station, I use the venerable RCA CR-88A and a big 10" speaker, absolutely spectaclar audio! If you use ECSS most of the time, don't bother, as in its stock form, the R75 is fine for that. Where it suffers is the non-functioning sync detector and the agc on am compounds that.

Les

I assume computer controlled Shortwave Radios require good computer sound cards.So,if a computer sound card's audio chip bites the dust after long use,that would require a new sound card or audio chip? For computer sound cards and some other good computer related thingys,I reccomend www.si87.com and www.monitorworld.com
I do not own a computer controlled Shortwave Radio,so I certainly am not an expert.

Dear Mark

Should I be considering one or two more machines in this mix.

I really like the WiNRADiO WR-G303e standalone usb machine but it is
slightly out of my price range (and could bring the wife descending
upon me--presently flying under the radar,)

thanks

Paul

If I were you I might be tempted to get one of the remaining Satellit 800's from Universal. It's just a little more than the 320.

Between the 320 and the 909 I would get the 320.

Between the super 909 and the regular 909 I would get the regular. The regular can be had for $219 and free shipping from Amazon/J &R. You could also get a 909 and a Sony 7600 from the same place for $349 (includes free shipping) which is the same cost as the 320. This would give you two radios. Give the one you don't want to your wife, get her interested (hooked) and then she will be the one wanting the radios. Also give her a regular Christmas present in case Plan "A" doesn't work. Net Result = you get two radios! WARNING: I take no responsibility for the outcome!

Also look at the deal that is offered on the 320 at dxtra.com
http://dxtra.com/rx320.html

P.S. Obviously if portability is a big issue than the 909 is the choice. Keep in mind that the 320 could be used on a laptop and have a little portability.

Hope this helps. Please let us know what you decide.

:)

Interesting. Narrow shift (50 Hz?).
50 Baud. Minimum shift keying apparently.
Similar to DGPS but different.

I can receive it in San Diego but it is
pretty weak.

This fellow has an experimental license:
http://www.arrl.org/news/stories/2003/08/07/2/?nc=1
But he is sending CW, not FSK.

(US hams don't have an allocation there:

Paul:

Getting a " Regular " 909

http://www.jr.com/JRProductPage.process?Product=18960

AND a 7600 from J&R sounds like a plan..

http://www.jr.com/JRProductPage.process?Product=1627439

They are both Very good radios.. AM / FM / Shortwave..

- also, string up a good outdoor antenna. Helps with reception of faint stations..

- Radiolabs doubtless does good work;

but two for the price of one..?

use one for DX / Broadcast listening, the other for picking up 11.175 USB transmissions..

- & an " extra" gift.. just in case

- Happy Holidays..

-

It's called "space weather". It's been pretty dreadful for the last
week or so and is now much better. For a rather cryptic introduction
listen to WWV at 18 minutes past the hour (45 past for WWVH in Hawaii).

I've heard generally good things about the winradios, but have no personal experience with them.

I think an external winradio (the USB one you mentioned)would make lots more sense than an internal one though, as odds are the radio will still be a fine performer long after whatever card standards we're using now are impossible to find on new computers.

I advise researching the heck out of purchases and buying whatever you really want even if it means waiting a couple weeks or months to fit it in the budget. In the long run, you'll end up with nicer stuff, and save money.

Dear Junius et al

Thanks for all the inputs so far from everyone!!

This particular review is good because it shows that the money spent on the S909 for sensivitivity is not there. That is the fundamental question: Are the mods worth the $ for basic 909 ==> S909 ??!!

Again, my leanings are for the 320D. I likely will not make a decision for a week.

>> BTW I will not buy two radios for sure!!<<

Moreover, I am still wondering what to mortgage to consider the winradio option as well.
what a beautiful piece of engineering it is. as well as the 320D and 909 basic.

You haven't a clue, do you?

This is exactly what they want. Your brain is scrambled to the point
where you react in a pavlovian manner and start spewing nonsense.

New world order is Bush deal. One world, ditto.

I am an isolationist like Perot and Buchanan.

The elitists are the fat cats who pull your strings, not old guys on
the sides of mountains in semi-rural California.

You could probably get it on your fillings in northern Ca. I've got it
as just shy of S+30 on my ALA100 (3 turns, about 40ft total), in the
daytime. I first detected this signal in central Nevada when looking
for beacons in September this year.

The recording is PCM to make it easy to decode.

BTW, I found the webiste for Octave, but can't get the windows version
working. I've had hit and miss results with Cygwin. I'm going to set
up another linux machine and quit messing with windows ports. [I had a
quad-boot PC with one OS as SUSE linux, but had to steal back the disk
space. This time I'll just build a second PC.]

> in sensitivity enough to justify the extra money?

Peter:
Regarding the E1, I would recommend paying careful attention to the portability aspect. For me, price was the main consideration when buying my first receiver (Kaito 1102) but the portability turned out to be a great advantage.

Have you listened to the radio in the AM and FM bands? How does it sound there? How does it compare to other AM / FM radios? I'm asking to help determine if the noise reception is specific to shortwave or if it affects the radio as a whole.

If you tune the radio to a weak/noisy shortwave broadcast, are there reception differences when you're holding onto the radio compared to when you're not touching it?

My hunch is that upgrading to a more powerful radio would not provide dramatically clearer reception. If you're just trying to improve shortwave reception, that's probably not a wise investment.

The best indicator would be if you could get your hands on a radio known to receive strong broadcasts in your area and do a side-by-side test.

Failing that, if you can make a risk-free exchange with Universal Radio, try a different radio. The Kaito 1103 gets excellent reviews (see radiointel.com for a review and a mention in Phil's Portable Radio Guide 2005). A radio like that should give you clear reception once you have minimized interference sources.

This is not necessarily true. Telamon and I are both in California,
where we manage to pick up the BBC, but the BBC broadcast is not
actually intended for North America. It's actually a broadcast to
Latin America. You can learn more about this on primetimeshortwave.com
and savebbc.org.

Does anybody know whether Kaito 1103 has PLL ?

I would guess so (having direct frequency input), but is hard to believe to have PLL and dual conversion at this price.

In addition, many users report no "chugging" during manual tuning, and that sounds suspicious too.

I am thinking to get one and I would appreciate your input.

Cordially

Nic.

So, what's the acoustic difference between using 1) an image reject
mixer and a broad IF filter and 2) using any sort of product detector
and a narrower IF filter?

A sideband is a sideband. If the unwanted sideband is xx dB down
from the desired signal, does it matter how it's done?

Here are some radios that I recommend in that general price range.

Refurbished Grundig Satellit 800 $400 (I highly recommend this radio. Very Large and Very User Friendly... Fantastic Sound and sync detector)

Eton/Grundig E1 $500 (similar specs but smaller than above radio and has XM satellite Radio built in)

Icom R75 $569

Icom 718 $539 (Very similar to R75 but is also a transmitter and transmits on all of the lower bands Ham bands. Requires a license but you might kill two birds with one stone if you think you might want to get into amateur radio someday.)

Yaesu FRG-100 $600

Sony SW07 $360 (Very Small/Portable)

Ten Tec 320 $349 (Computer Controlled)

Winradio G303I $500 (Computer Controlled)

I forgot it is tied to Cygwin. But I'm always running Cygwin.
I've never had great problems installing it.
But hey, Linux aint a bad way to go either.

Your mentioning SkySweeper got me interested.
I down loaded the demo version and tried to install it.
The install fails because it complains it can't find all the
components. I've downloaded it, extracted it, and tried
to run setup. All of that twice.
Have you had any problems like that?

Just a big 'what if' here... a hypothetical question. Setting aside all other politics for the moment, what would be anyone's opinion if the OP's assertions turned out to be true (this is not to say they are, because at this time there are no credible accounts thereof)? Surely such a statement would be grounds for immediate impeachment, would it not? Part of the oath of all federal elected officials and members of the military is to swear to uphold and defend the Constitution.

Mind you, I take with far less than a grain of salt most everything that comes from the kook sources on both sides of the political spectrum (this tends to include any and all talk radio, whether it be Rush Limbaugh, Ann Coulter, or Fox News Channel on one end or any of a hundred left wing kook sites or anyone from Air America on the other.. but it bears actual THOUGHT on an issue such as this. Even if it hasn't happened, it's a contingency that bears some thought.

Surprisingly audible here in NJ at 1:11 UTC on the R75 with G5RV. Also audible on both the 7600gr and YB-400 with the wind up toy wire antenna.

Currently music.

> Is this indicative of anything?
>
> The work continues. And thank you for your help in all of this.

The inside of buildings depending on construction or how much metal is
used will reduce the signal based on frequency. Often times lower
frequencies suffer more than higher so the fact that you can get AM
broadcast is a good sign that SW signals will make it through.

The radio could have a problem on just SW bands and be OK on AM
broadcast. Do you know anyone with a SW radio that you could compare
yours with? If not you will have no choice but to return it for another.

Check on that 5950 signal. It should not be there in the daylight hours.
If it is there at all hours then it probably is a local AM broadcast
station over-loading your radio and showing up on the dial where it does

not belong. If this is the case then maybe your radio is over-loaded to the extent that it is desensitized to SW broadcasts.

Check for local AM broadcast stations on the SW band they are usually multiples or a harmonic of their frequency. Say you have a strong local station on 1190 kHz. You should look for it on 2800 kHz or 2 times its main frequency. Up to 5950 kHz, which would be the 5th harmonic.

I think this radio is single conversion so there are other ways for a strong local to mix with circuits in the radio and show up where it does not belong. You need to check this out and ID the station if it is there all the time, which it will not if it is a SW station reflecting off the ionosphere.

The only problem I had with it was trying to run it under X64. I works under XP and win2k.

Sometimes if the program is written under later versions of VB (which I don't know for a fact regarding this program), the DLLs are not present. [This happens with X64.] The older versions of VB created larger files, but were less dependent on the OS being stuffed with the right DLLs.

If the complaint is missing files, google the name of those files. If you find them, place them in the same directory as the install program. This will get the program working at least once. At that point, you need to do the research to see where exactly the DLLs normally reside. Any chance you are using windows ME (the minus edition)?

If you could write up how to install Octave with cygwin, I'd appreciate it. I was trying to run GRASS, another linux program, with cygwin, and had no luck. Grass can compute line of sight regions using USGS seamless files. It's not really useful for HF, but it is useful for VHF on up.

Yes, it uses PLL and dual conversion. The result is a radio that holds on a frequency very well, but tends to generate images of signals 900 khz down (twice the IF).

Any radio that tunes in 1khz increments is going to chug a bit as it skips 1 khz at a time. It isn't significant on the 1103 though.

Go for the radio - but get the Degen De1103 rather than the Kaito. It is is an incredible package of features at $65.00 shipped.

Hi, i was the one that was going to buy the Grundig FR200. Well, i bought it, and it's an ok radio, but it seems to only pull in stronger sw stations. I decided to buy another sw radio, and i found one off the internet. It's called a Zenith Royal 1000 trans-oceanic from 1958 and it was a bit pricey, but i bought it anyway and i got it and turned it on and i was amazed at how much sw stations it can pull! It gets the stronger stations plus the weaker more exotic stations! And i never saw a chrome radio before and it's shiny, beautiful and very sturdy. So, i have been listening to this Royal 1000 shortwave radio for 3 weeks now, and i'm hooked! Shortwave is very weird and i love it. jacob

At least with USB, when the next thing comes along, you could probably buy a converter. With an internal card, once the standard is dumped, you are forced to maintain an older PC to use the card.. [Plenty of people had to dump ISA GPIB cards and buy expensive PCI cards. I'm not sure how long PCI will last since the new PCs use PCIE.] On that alone, I would get the USB radio if you really want to go the black box route.

I use my gear at home and in the field, so computer controlled radios are not high on my list. Notebook computers draw too much power for field use, plus they generate noise.

I use the Eton E1. It has AM/LSB/USB all with or without synchronous detection (sync works great!), passband tuning, selectivities 7/4/2.3 kHz, bass & treble controls, 1,700 memories, tuning steps & readout are 1 kHz, 100Hz & 10Hz. Can run on 4 D batteries to avoid some noises coming thru AC power. Only about 5 pounds with batteries, so I just set it on my lap. Considered by many the best portable ever. No radio is perfect, but most $500 radios are good. If you feel unsure about what to get, you might want to compare in detail reviews such as those in the 2006 Passport to World Band Radio (it's under $20 shipped from Amazon). George S., MN

I own a Zenith Trans-Oceanic Royal 1000 Radio.I bought it for four dollars at a Goodwill store about nine years ago.I brought it home and I put new batteries in it and it wouldn't make a sound,it won't say anything,nothing but dead silence.I did make sure the battery contacts are clean and I didn't see any loose wires that look like they might need soldering back together,although I haven't removed the chassis from the cabinet for a better looksee.The radio's top front panel door is missing and almost all of the chrome paint is worn off all around the dial area.Heck,I dont know how to work on radios,but I sure would like to get that radio working.I guess I can't expect all of the beat up old radios I buy at thrift stores,junk shops,fleamarkets,etc,to work like brand new.

For about the same money, you might have picked up the 3000-1. AM/SW stages, but with FM, as well. Nice radio. I have a couple of them. Selectivity isn't as nice as you'll come to need it. Meaning that you'll start to notice the crosstalk, and the heterodynes, from adjacent channels. That's where better filtering comes in handy. And at this age, you'll probably want to get an alignment. Fortunately, the design is fairly straightforward, most any tech can do the job with fairly rudimentary equipment, and service manuals are readily available.

A couple of caveats on this series radio. If you decide to use a DC power supply instead of batteries, you'll likely have to wire it in, most did not come with an accessory power supply input jack. And the circuitry was neither regulated, nor diode protected from overvoltage, or reversed polarity. You'll want to use a regulated power supply, OR a power supply that's rated for this radio's draw. An overvoltage WILL damage the set. And use of an unregulated supply rated for more than the radio draws WILL provide an overvoltage. Significantly so.

Remember that this was a radio built before contemporary battery technology had been refined. Carbon Zinc cells had very short lives, compared to today's alkalines, or even today's carbon zinc cells. So, the radio was built to deliver good sound, lots of it, and for a long time, without running the batteries down. So, you're going to get some SERIOUS life out of a set of alkalines. The trade off is that the transistors are not as robust as contemporary transistors. So, you need to be wary of static discharges.

There are a lot of myths built up around these radios over the years. Claims of exaggerated performance are very common. Truth is, that these were adequate performers at best. What makes them seem so sensitive is that the AGC time constant is abnormally fast keeping even the faintest noise artificially loud. And selectivity can be downright dreadful on

crowded bands, making it difficult to enjoy some stations without birdies, whistles and adjacent channel splatter intruding on your reverie. Audio was good for the day, but not exemplary. In fact, in head to head shootouts, the solid state Zeniths routinely lost to the Masterwork (M-29xx and beyond) for audio quality and performance. The upside is that the Masterworks wound up in closets not working, and the Zenith's continued to be dragged over God's green earth in search of another station.

Parts for this set will be relatively easy to come by. Transistors are available from serious electronics shops. Most replacements will actually improve the higher frequency performance of the set. Caps, resistors, pots and switches are largely generic. Only some sheet metal and cosmetics are really proprietary, so you can keep this baby singing and dancing as long as you like.

And you WILL like. These radios have an infectious quality. Long after you've tired of the poorer performance and moved up to a serious tabletop, you'll still be listening to your Zenith, dragging it on vacations, to the garage, or to the basement. It's definitely a radio you can keep. And enjoy.

Until the Congress turns off the analog broadcasting channels and sells the spectrum space to commercial wireless dog polishers. But that's another rant for another time.

Enjoy your Zenith. It will be your first of several.

Yeah it's the pic and also the use of the word 'cleansed' in the description.

It has 'Radio-Mart' written all over it.

Perhaps this is 'Radio-Mart's' ticket buying and selling operation, but then one wonders what the purpose was in listing this radio through that sellers ID?

Folks,

I came across your group while searching for a shop which can repair my Sony 2010. I haven't used mine in years, though I recall it sometimes "freezing", and thought the AM reception should be better. Could anyone help me find a good repair shop? I'm also looking for the "fix" details of how to check the Q303 trans. in the radio's front-end which I recall could blown, thereby affecting reception. Any help would be greatly appreciated.

I assume you want to buy new, not used. I also assume you do not want to spend a whopping $400 or more on a mere portable.

In that case, you might consider the Icom R-75 or, for a little more, the Palstar R30C. And if you're open to using a software defined receiver, there's the Ten-Tec 320, which is said to be a tremendous value for under $400.

If you're open to buying a used receiver, then you should get one of the Drakes. They seem to bring the most bang for the buck on the used market.

Paul, make sure you check out the Eton E1-XM portable, in case you haven't heard about it. The tuning resolution is much better than on the 909. I've seen it on sale for $400. RL Drake had a hand in the E1 so that has to be a huge plus!

There are some people in this news group who build and repair radios.I would ask them first.However,old 80's years old Otto Wise lives about five miles West of me and he likes to repair at least one radio a week just for some extra money.I need to round up some of my favorite old radios and take them over there and let him check them out for me,before he kicks the bucket.

Couldn't tell you, but there is a russian site that has a highly
detailed review of this receiver. Does anyone have the link?

It uses a 450khz IF and an image of many strong signals can be found
900khz down. In the area of 8.9mhz they do conflict with potentially
interesting signals from commercial aircraft. Otherwise they are not a
problem.

It depends on the kind of listening you plan on doing.

If your listening is going to be a mix of major broadcasters, some hunting for difficult to catch signals and listening to ssb (hams, etc) then go for something like the Eton E1, the Sangean 909 or the smaller Sony 7600. All three of those receivers will do a commendable job of catching signals and as a bonus they will do a creditable job on AM and FM signals as well. Of the three I would recommend them in the order listed, with a strong suggestion to go for the E1. Also see this review for a lot more details:
http://www.radiointel.com/review-etone1.htm

A shortwave only receiver is a specialized product designed to receive voice and data communications. Many models will provide a high level of performance that some listeners may need on the shortwave bands. Many of us would prefer the much fuller audio from something like an Eton E1 and the ability to catch a broader range of signals like AM, FM and optionally XM signals. The features offered on the E1 equals and in many cases exceeds those seen on communications receivers.

Images are not usually a function of being in an urban vs a rural
location.
Images can occur on this radio 900 khz down from a strong primary
signal.

Thus if you tune from 5.1 mhz up repeats of nighttime broadcasts from
the 6mhz band can be heard. BBC and Radio Havana are a couple of
strong signals on the east coast that pop up more than once.

Also, tune from 6.3 khz up and hear repeats from the 7.5 mhz band at
night.

And if you tune up and down from 8.0 mhz images from the 9mhz band will
appear.

The DE1103 may have dual conversion but it it is not implemented as
well as it is on say a Kenwood R-5000. But the De1103 is only a $50.00
radio too. The images are not a big deal, but they are there.

The Drake blocks better because you can sync to the side band opposite
interference and additionally you can move the bandpass control to that
same sideband. The 7030+ demodulates and syncs to both sidebands and you
can only move the passband control.

.....
.....
I recently bought two TO1000's and one 3000 on ebay. The 1000's were described as not working and sold for about$20 for parts. The 3000 was $60 and was ok except the express company wrecked it by hitting the radio with such force that the bandswitch and related parts was driven into the dial mechanism. The two 1000's had minor problems: a bad connection in the battery pack due to leakage, and a transistor not seated in its socket. Both 2000's are working fine and were very easy to work on. To my surprise, the mangled 3000 was fixed with no ill effects. The bent sheet metal was pried back ito shape and because of the point to point wiring the bandswitch was intact.The dial popped back into shape and the mechanism was reconnected. An online dial stringing diagram was necessary to figure out the dial cord arrangement (It is tricky, especially the FM stringing in the back) I have had a lot of fun with these old radios: they are easy to service and align, the shortwave bandspread is convenient, they sound good, and are built like tanks. I think every SWL should have at least one Zenith TO in his experience to put SW radio in historical perspective. On surveying ebay, I find that prices have come down somewhat and make an old Zenith worth the gamble. There was also a Heathkit copy of the 1000 that was pretty good, but Zenith Corp, who owned Heathkit by this time, made them withdraw it from the market. They are so simple electronically that often a careful visual inspection may reveal a loose transistor or corroded battery connection.

Not sure I understand. What would you want two computers linked through
a port work to work for.

Hi Jacob:
I own an FR250 but it's only for emergency purposes. That type of
radio is not really conceived as a shortwave superstar; the main goal
of products like that is the size, low-power operation, durability,
etc. So I think it's smart to buy something else for regular use.

I wonder if this antenna was profitable for Kiwa. I asked Craig of Kiwa if they'd ever bring the Kiwa loop back, assuming that they could get all the materials (e.g., PVC pipe) required. He said no way. The Kiwa loop will never be made again. I don't know why Craig would feel this way unless the loop just wasn't a money maker.

Pure speculation on my part. There probably was profit in it but not huge. That may have been a very labor intenstive product to build.

Hard to get materials is one factor. Also, the crowd of MW DX'ers gets smaller and smaller with each passing year. Not to mention the forthcoming destruction of the MW DX hobby courtesy of IBOC/digital radio (thanks to the built in adjecent channel hash interference).

The cumulative effect of all of that may have made it more trouble than it was worth and there isn't much in the way of "future growth."

2757. Saints Unnamed on 1-15-05

Newsgroup: rec.radio.shortwave
Date: 2005-12-17 19:35:44 UTC
From: pacciino@yahoo.com
Message-ID: <1134848144.473638.257050@g43g2000cwa.googlegroups.com>
Source record: 54815

Saints Unnamed say, "The Soul of a human being is not seen, but It is that Link of Association that connects a human mind, body and Soul to The Divine."

REVELATION DELIVERED THROUGH FRANCES M. KLUG
ON JANUARY 15,2005 AT 11:30 A.M.

"We All smile when We make this next statement.

It is Important that All that has been delivered through this Gift of Instruction based on Divine Love, be scattered into many places. Even those who are present in these places are not familiar with Our Presence or how We address Our Words, instructing those yet living that there is an Important Factor, an Important Gift, to being created a human being.

We All smile at this little one that speaks Our Words so others will be able to remember Them in print.

The Father's Will is more generous than It is anticipated or understood to be. All of the Saints Here in the Heavens cherish the moments that so-called Revelations can be put in script, thus not allowing only a few present to have the privilege to read Them and to be able to follow the Beauty that is taught in Them.

Speech, to the human mentality and mind, is a Gift far greater than it is understood to be. Without it, nothing could be learned, giving strength to the mentalities involved, because the Words instill into the minds, memories that give hope in many areas of life.

Whenever We get the nod from The Heavenly King to participate in sharing What He Wills others to know, to understand, giving them the ability to grow spiritually, thus giving strength to the Soul that they are entitled to have, due to the fact that in the Creation of human life, this Gift was a surprise to many, but truly a Gift of God's Love for all the human mind and body would be capable of, in not just instructing others, but a sense of communication, instilling how close a human mind is to The Divine.

The Soul of a human being is not seen, but It is that Link of Association that connects a human mind, body and Soul to The Divine.

So much could be spoken on the privilege that human life is endowed with, because to be this close every moment of every day, bearing the option to see, to understand, to participate and be able to practice the importance of purity of the mind according to The Creator's Will, in order for the mind to be in an understanding manner

to being able to cast out what would be immoral or pleasing to the devil.

I will close at this time, but I must add: When Any of Us receive the privilege to enlighten those yet in the living state on what a Treasure human life is endowed with, and has the capability of using, is more than the human mentality can perceive it to be.

Is it not so that those who many times feel the desire to say to another human being, 'God bless you,' this can be done silently. Do not forget, The Heavenly King knows even your silent thoughts every day you live in the human way."

Saint Joseph's Hill Of Hope
Brea, California 92822 U.S.A.

My ATS-606A is still providing nominal service. It's been around the
world several times (mileage wise). Display is fine. The METAL
speaker grille is slightly curling up on one corner. I can get
Bangalore in the morning with the 250 cm built in whip.

IBOC is not authorized currently for night use. It is ok to turn it on at sunrise and have it run til sunset, I believe. Sunrise and sunset are the two prime DX times on MW.

The broadcasters want it at night I think - which mean the FCC will allow it eventually. They have to pretend to go through an evaluation/consideration period first.

I can't see it succeeding on MW. Perhaps FM. I hope it does die a quick death on MW.

Here is an example of using GRASS for line of sight mapping
http://www.gis.unbc.ca/courses/geog499/projects/2004/vera_lindsay/
By a high school student, no less.

Much of the on-line use of GRASS has been related to wifi mapping.
Check out

It definately seems as if the problem is isolated to the shortwave bands, as both the AM and FM come in loud and clear, and I daresay even affords better reception than the other AM/FM radios in my house.

> If you tune the radio to a weak/noisy shortwave broadcast, are there
> reception differences when you're holding onto the radio compared to
> when you're not touching it?

Only insofar as the quality of static changes. ;-)

> The best indicator would be if you could get your hands on a radio
> known to receive strong broadcasts in your area and do a side-by-side
> test.

Unfortunately not a possibility. I also loved the recommendation of buying another YB 400PE and putting them side-by-side, but unfortunately I don't have any local retailers. Seems that all the standard electronics chains stop just short of the YB 400.

> Failing that, if you can make a risk-free exchange with Universal
> Radio, try a different radio.

I'm going to have them bench test the current radio. Hopefully they'll turn up a problem with it, for if they don't god only knows what the issue is.

Last night I tried 20+ feet of long wire antenna out the window on all of the time signals frequencies. Not a single one came in, save the weak one from Canada on 3330. Most importantly, there was no change in reception whatsoever between using the long wire and not. That is, in my opinion, indicative of something, as most people seem to agree that 20+ feet should create a decided change in reception. Moreover, most everyone seems to agree that the US time broadcasts - from Colorado with significant power - should be received without issue. I don't get them at all. Not even a hint of a weak reception. Just static.

On another note... What I'm about to say shouldn't impact the previous discussions about reception and my radio, as I've tried numerous tests in remote locations as well, but I do have a question about the possibility of my building itself being used as an antenna.

I live in a rather curious building - an old converted railroad warehouse. To the best of my knowledge, and given the creaks in the floor ;-), most of the internal construction is wood - big exposed beams and all. The outside, however, looks like a massive (quite unattractive actually, but I like to say "eclectic") tin can. It is sided all around, from top to bottom (three floors), but aluminum-looking siding, raw color and all. I saw mention in another thread of someone attaching a long wire antenna to a rain gutter. I wonder, would attaching a long wire to my siding render the entire building into an antenna? I know nothing about the propagation of waves over differing materials, so I'm uncertain as to whether or not this would be effective, or perhaps even have a negative impact.

A good selectable sideband sync' detector uses phase cancellation of the
opposite sideband which is more effective than just using a narrow
filter and/or passband tuning. The audio is also better when you don't

have to use a narrow filter.

Pete:

If the entire building exterior is coated with aluminum this could explain the reception problem but you said you have taken the radio outside and also strung up a 20 foot antenna outside with little or no positive results. In my opinion the radio is defective. Contact Universal ASAP.

Have you thought about the Sony 7600 instead? It is rated somewhat better than the Yacht Boy 400 and can't be more than $20-$30 more. I would pay that much more just for the sync detector the Sony has.

One other thing to keep in mind, you have about $130 in the YB 400 already. That's a good step forward toward getting a radio in the $500 range if you think you are going to get into this pretty seriously. If nothing else I would consider getting the Sony 7600 for just a little bit more money.

I hope this helps.

I think you're 100% right, Wavetrapper. Craig and I have been good friends since the late 1980s, and I'm very familiar with his approach to Kiwa products. Like with the Kiwa MAP unit, the MW Loop was labor-intensive to build (but not quite as bad a situation as with the MAP). The major products at Kiwa have been a labor of love for a dwindling hobby crowd. He kept the parts costs as low as possible by doing most of the work himself (you should have seen the ingenious, screw-driven device he cobbled together to cut the spiral grooves for the wire in the PVC pipe core of the MW Loop!). Craig also built his own flow-solder table for soldering PCBs, if I recall, and a number of other clever tools and construction aids.

Craig is more of an inventor/engineer than he is a business person who has all the expenses and profits figured out to the last penny. He had a very good career before Kiwa as a broadcast station engineer, and gained quite a reputation for modifying expensive pro-recording consoles to produce better sound. He still does some consulting on the side, but his heart is in the Kiwa Electronics business.

Unfortunately, as the hobby slowly decline, we lose some of the quality accessories and peripherals like the Kiwa MAP and the Kiwa MW Loop. I'm aware of an amazing prototype replacement for the MW loop that Craig was working on a few years back, but now I don't think he'll be producing it.

So what you're saying is that I *can't* use it as an antenna, eh? ;-)

> but you said you have taken the radio outside and also
> strung up a 20 foot antenna outside with little or no positive results.

Exactly. I've tried it all, with no positive results.

> In
> my opinion the radio is defective. Contact Universal ASAP.

Done. They are leaning that way as well, after hearing the evidence.
We'll find out in time.

> Have you thought about the Sony 7600 instead? It is rated somewhat better
> than the Yacht Boy 400 and can't be more than $20-$30 more. I would pay that
> much more just for the sync detector the Sony has.

I hadn't considered it, but it's been recommended several times so I
may go that route.

> One other thing to keep in mind, you have about $130 in the YB 400 already.
> That's a good step forward toward getting a radio in the $500 range if you
> think you are going to get into this pretty seriously.

Exactly, and I have considered this as well. I do believe that, once I
am up and running, I will be enjoying this enough to justify increasing
investment - so I might as well jump in now.

Radios in the $500 range are certainly a possibility, rather than
getting another one comparable to the YB, but the question is which
one... There seem to be just as many recommendations as there are
people. I've been looking at these:

Icom R75: Looks very decent and right around the price I was thinking
of. What concerns me is that it really is *just* a shortwave receiver,
and I wouldn't have any possibility of playing in the higher
frequencies (it doesn't even have the FM broadcast range - not that I'd
necessarily need that anyhow...) if I wanted to.

Yaesu FRG-100B: Same as above, but the range is even more restricted.

Grundig Satellit 800 Millenium: A bit less expensive (that's not
really a selling point...) and it *does* have a wider range than both
the R75 and 100B, including the VHF aeronautical band, but I've heard

more than a few negative reviews of it.

Eton E1: Of course, it's the new one and keeps coming up in all the reviews. I have no interest in the XM capabilities and I wonder how much I'd be paying just for that possibility rather than genuinely better equipment.

The one that *really* seems to excite me is the Yaesu VR-5000 with its massive range of coverage - something that I think that I'd ultimately be interested in - and all for the same price. What concerns me, however, is that the compromise in getting such a wide range of frequencies with the VR-5000 may mean that there is less sensitivity over all of them leading to a less-than-desirable *shortwave* experience.

If I could determine that the VR-5000 would perform comparably to the others in the shortwave bands, I'd grab it immediately. As I think that my interest would ultimately extend into these other frequencies, it seems like a waste to spend $500 to $600 on a shortwave-only radio. But I suspect that the VR-5000 may have shortwave shortcomings as a result of it being such a "jack-of-all-frequencies" receiver.

I'd be interested to know not only what you folks think of the shortwave reception capabilities of these radios - broken down into a numbered list, but I also really don't know where things like the YB stand in relation to these radios. Out of the box, where do these things stand in relation to one another?

I understand the need for a good antenna and realize that there are
many variables in getting good reception. But by your logic above,
your advice from a couple days ago:

>I dont know how much money that Yachboy radio cost and I think somebody
>said Amazon sells the Sony 7800 GR radios for about $129.00,a good price
>for a very good radio. [snip]
>Then you would have a much better radio.Only my opinion.

wouldn't hold. Or at best, it would be poor advice.

If you have one antenna and take all the models that I mentioned
straight out of the box and one by one hook them up to the antenna,
there must be some difference.

going to depend upon where the AGC signal is developed.

The bind with a broad IF filter that is upwind of AGC generation is
you can develop AGC from signals in the passband that are ignored by
the product detector, and effectively reduce receiver performance. You
almost always want a narrow IF filter upwind of AGC generation to
avoid that problem.

< Snip >

The aluminum exterior is a problem but if you place the radio near a
window it could still work inside and you indicated that the lower
frequency AM broadcast band comes through then so should SW at higher
frequencies.

Looks like the radio has a problem on SW.

Telamon wrote:

> The aluminum exterior is a problem

Just confirmed - or so my magnets say - that the siding is in fact steel and not aluminum. I realize that this is still a problem, but ever curious about the possibilities of using the house as an antenna I nevertheless searched through all of the posts on the group regarding steel siding and the verdict seems to be "it's worth a shot, but it could go either way". It certainly didn't help with the current radio, now highly under suspicion of being a lemon and on its way back to Universal. I'll explore the possibilities again once I confirm that I have a new, working radio.

> but if you place the radio near a
> window it could still work inside and you indicated that the lower
> frequency AM broadcast band comes through then so should SW at higher
> frequencies.

That AM broadcast band comes through loud and clear! It has great reception on that band.

> Looks like the radio has a problem on SW.

Without the actual bench tests, that seems to be the verdict here. As I said, it's on its way back now. We'll see in a week or two. I'll report back anything that I hear.

I wanted to mention again how much of a help you guys have been. Extremely supportive, very willing to share, speculate, think-through and offer advice. I can't thank you enough.

And don't worry, I haven't given up. If anything, I've learned more as a result of the radio being potentially bad than I suspect I would have had it worked perfectly out of the box, and I intend to keep the pace up.

Happy holidays to you all.

It's really hard to say if the radio is defective since propogation
has not been so hot this week and Peter does not really know what to
do. Peter you need to get the radio way from the condo and bring the
wind up antenna with you. Go to the a park or anywhere outside and
connect the wind up antenna strech it out over the ground. Dont use
the scan mode but tune the bands manually. Set the tune rate to 5 kz
and fine tune to 1 kz. The 49 meter band should be alive
and full of signals at sunset your time. Start at 5900 mz and tune in
5 kz steps. Unless there is solar flair-out going you should be
receiving something on 49 meters. If this is a no go then send the
Yachboy back. The best portable setup I have come across is the Sangean
909 paired with the Sony AN-LP1 travel loop. This will set you back
$350 US but is a pretty good setup to start with.

DaviD Proclaims - " Fox is nothing but spin and agenda. "

DaviD - Coming from 'you' that is an Expert Opinion [.]

DaviD - Or could it be that the Mass Media is changing
to reflect the Character and Nature of the Mass Audience
that they are trying to attract - could it just be ?

DaviD - And 'if' that is the case; and 'if' according to all
these Mass Media Marketers the Vast Majority of Today's
Population {Audience} of American TV and Radio Listener's
are Traditionalist, Moderates who's Personal Moral Values
are reflective of American History and Culture that is by it's
general nature Judeo-Christian. And that same Audience
when questioned expresses a Love of Their Country and
say that they are Proud-To-Be-An-American.

DaviD - Then Guess What - Screaming-In-Your-Face-Liberalism
does not sell anymore and in-fact Looses Market Share
to the more Moderately Perceived and Better Balance
News Reporting Organization.

DaviD - Just maybe many American's want to simple Hear
some good honest News Reporting -vice- The Self-Important
Sounds make by some of Today's Talking-Head News Makers !

If you buy The Degen badged unit from Ebay seller Liypn he will state that it was made after that date. Otherwise Universal Radio will sell the Kaito badged unit and I believe they will state when it was made. My experience with the other sellers of the Kaito units is that they are not willing to say when it was made.

My recommendation is to go with Liypn on price - it is almost half the Kaito model.

And after being burned by Radio-mart once, he turns around and goes
back for more witin days. I'd like to meet this guy's wife.

What raises some questions, is that Radio-mart's common mode here, is
to post a complaint of 'not-so-nice-feedback,' while keeping both his
auctions and feedback profiles private. Rendering further investigation
impossible.

While there are actually legitimate reasons for keeping an auction
private, this pattern of feedback hostility without any avenue of
confirmation would be reason alone to avoid doing business with Radio-mart.

The answer to that question is probably beyond an internet discussion group. The answer is partly going to be determined by what you understand your target audience to be composed of. Then you are gping to have to determine what kind of advertising works on the internet. I think you should contact someone with training and experience in marketing to determine what does and more importantly does not work with an audience that you really can't survey easily.

Communists takes out an ad against "fascist" America in the New York Times.

The World Can't Wait (WCW)
http://www.discoverthenetwork.org/groupProfile.asp?grpid=7213
an organization that opposes President Bush's decision to send U.S. troops to Iraq, ran a paid advertisement in The New York Times Monday denouncing the "fascists and religious fanatics" responsible for the ongoing unrest and carnage in the land formerly ruled by the iron fist of Saddam Hussein.

WCW was not talking about bin Laden, Zarqawi, Zawahiri, and al-Sadr, et. al. " the Islamists who have vowed to wage perpetual jihad against the West until the latter is eviscerated and ultimately replaced with an Islamic caliphate. Its condemnation was aimed exclusively at the United States. Members of the Bush administration in Washington are the "fascists and religious fanatics" who are "setting out to radically remake society very quickly, in a fascist way, and for generations to come." (Did we mention they were fascist?) Bellowing that the U.S. government "is moving each day closer to a theocracy, where a narrow and hateful brand of Christian fundamentalism will rule," WCW vows "to send Bush, Cheney and the rest of those fascists packing." According to WCW, when people examine Bush's policies, they "think of Hitler " and they are right to do so."

The WCW ad was the handiwork of C. Clark Kissinger, created by the Maoist radical in June 2005. Kissinger is a longtime leader of the Revolutionary Communist Party, a Maoist vanguard dedicated to promoting civil unrest in the U.S., as evidenced by the organization's key role in initiating the deadly Los Angeles Riots of 1992. RCP is so violent, it is considered extremist even by other Maoists. In 1987, Kissinger also created the rabidly anti-American group Refuse and Resist, which excoriates the U.S. for its alleged quest to achieve "global dominance and superiority over other people" " a goal with "raising the specter of a police state" and possessing "a distinctly fascist aura." Moreover, in 2001 Kissinger initiated the Not In Our Name (NION) antiwar project, which condemns "the injustices done by our government" in its pursuit of "endless war"; its greed-driven "transfusions of blood for oil"; its determination to "erode [our] freedoms"; and its eagerness to "invade countries, bomb civilians, kill more children, [and annihilate] families on foreign soil."

"The problem in this country," says Kissinger, "[is] the oppressive system of capitalism that exploits people all over the world, that destroys our planet, that oppresses minority people, that sends people to the death chambers in droves."

Given his radical, violent history, it is worth noting the names of those who chose to endorse and sign the WCW ad that was his brainchild. Below is a

partial list of the more prominent signatories. Many of them are officially identified as WCW supporters on the organization's website. They know well who Kissinger is, and they are familiar with his loathing of America. By signing the Times ad, these individuals (and organizations) make it clear that they share the founder's fiery sentiments (as if the text of the ad wasn't badly enough) . Signatories include:

You can buy Degen Radios on China's eBay for US$34 (free delivery in China)!
If the seller is making a hypothetical US$10 profit on each radio the
manufacturer (Communist owned enterprise) is dumping this product in order
to eliminate the competition. Namely Eton & Sony. The short-wave radio
marketplace in China is, for all practical purposes closed. It is difficult
to find and purchase Eton or Sony short-wave radios in China. They can be
found but you will spend much of your time hunting.

Be careful on what you spend your hard earned money.

From: Robert11 <rgsros@notme.com>
Message-ID: <NeKdnaNA5Ze4PjjeRVn-hw@comcast.com>
Source record: 54963

Hello:

Have been putting a fair amount of time into
trying to understand antenna radiation patterns.
Guess I finally have to admit that I'm 3d challenged, and frankly have
difficulty in visualizing them.

So, let me just ask:

Am thinking of purchasing a PAR EFL- SWL receive only antenna for my attic.
Can probably be considered as an end fed dipole
Will probably run it as an inverted L, with the vertical section being about
10 feet, and going from the attic to the floor below where the radio is. As
the total length is 45', this would leave 35 feet going horizontally.
(placing outside would not be practical)

Interested in as omni as possible, as do listening most anywhere from 0.5 to
30 MHz.

Have two questions, please:

a. anyone ever use this antenna ? Think it would be "substantially" better
than what I have now which is a simle random length wire going around the 4
sides of my attic. Would sure appreciate any thoughts and opinions on this
PAR unit.

b. How "omni" is it ?

e.g.,

If I have the wire axis running N-S, is most of the sensitivity then in the
E-W direction (perpendicular to the wire) ?

If so, will I pick up "anything" in the N-S direction ?

Thanks,
B

< Snip >

Steel or aluminum are metals and will shield the interior from RF energy.

There are big holes in the shielding though comprised of doors and
windows and maybe the roof that lets the energy in. The waves are
smaller at higher frequencies and so if lower frequencies are getting
through then higher frequencies should also make it through.

Your reception should be better near the openings in the shielding. You
may be able to tell this with the weaker signals to your area where
there may be no noticeable difference with a strong station.

The antenna will pick up stations in all directions. Usually the issue
here is the height above ground which will determine the horizon
visibility of the antenna. The higher up the antenna the more horizon it
will see and have a lower angle of reception. Generally the higher up
the antenna is the stronger the signal will be that it picks up. Being
in your attic it's probably on the order of 20 feet off the ground so it
will have a tendency to distort any pattern it may have higher off the

ground. Being in the attic will further distort the innate pattern the antenna may have and spread out any lobes in the pattern.

Only problem is you need to sign up for any details, which in this case
makes no sense for a SW receiver.

2876. McKay Dymek DA100E unusual failure mode

Newsgroup: rec.radio.shortwave
Date: 2005-12-18 20:22:50 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <43A5C523.7A0@mindspring.com>
Source record: 54985

The antenna rod, which is pressed onto the screw mount attached to it,
the whole thing then screwed by the customer onto the antenna base,
works its way off what it has been pressed onto.

The rod, in my case, fell to the ground and was standing bottom straight
up in the snow.

I simply (ha! the screws rust) replaced the whole thing with the
antenna rod assembly from one of my two dead DA100E's. (I have
six active, and one spare; and have accumulated two dead ones,
at a rate of one failure every 18 DA100E-years.)

I'm cooling the rod's base and heating the rod, and will see if it
can be pressed back together or not. Just pushing doesn't do it.

The funny thing is that, now that I look, another one is in the
process of working its way off too.

I don't get the mechanics of it.

Success. I don't know how much the temp difference helped.

Drill a hole in the short 2x4 just large enough to accommodate
the 2nd segment of the antenna, which is also the diameter of the ball
on the end. Put the hole at the end, and position it off the end of
a basement stair, with the antenna pointing down through it.

That supports the base element of the antenna, recently heated;
insert frozen screw mount, tap in with hammer. Goes right in.

I pre-coated each with DeOXit (brush-on) so they make decent
electrical contact too.

Now wait for the next outdoor one to fall apart and I have a
replacement.

Eton radios are nothing more than rebadged Degen and Tecsun receivers.
So if they wanted to eliminate any potential competition from Eton all
they have to do is stop supplying them!

Sony is the last of the significant manufacturers to bail out of the
shortwave receiver market. The market for shortwave radios was never
large, and it has shrunk to a tiny fraction as we all know.

The short-wave radio
> marketplace in China is, for all practical purposes closed. It is difficult
> to find and purchase Eton or Sony short-wave radios in China. They can be
> found but you will spend much of your time hunting.

If a chinese SWLer wanted an Eton product they would just have to buy a
Tecsun or Degen. I'm at a loss as to why a chinese national would want
to pay the inflated Eton prices.

Not many Sony shortwave radios to be found in chine bcause they are not
making any. And because China hasn't opened it's market to outside
products. Not unlike Japan and the good old USA with their import
duties. Still, I've seen more than one chinese SWL's website with
extensive collections of radios that include several old Sony and
Panasonic radios as well as numerous chinese brands.

I'm completely missing your point here. You seem to be trying to prove
some sort of chinese conspiracy....

>
> Be careful on what you spend your hard earned money.

For sure. That's why the Degen DE1103 from a chinese seller is such a
great buy!

Hello Everyone - In-Search-Of-A : Kiwa Air Core MW Loop Antenna

This eBay Auction for a Kiwa Air Core MW Loop Antenna
http://cgi.ebay.com/Shortwave-loop-Antenna_W0QQitemZ5843381426
Ended with a total of just Five (5) Bids; when some used
the Buy-It-Now Option for a Price of $795 + S&H

A SHOUT-OUT TO : CRIAG S. [MR. KIWA ELECTRONICS]
How about making a few more of these Kiwa Air Core MW Loop Antennas.
* Sell them at an eBay Opening Bid of $750 ?
* Seems to be a Market out there and the $750 Price seems to be close
to the current Open-Market Price.
* At a $750 Price there should be enough Profit to make it Worth your
Time and Effort to build them one-by-one or in small lots of 4 or 5.

that's all folks ~ RHF

Source record: 54852

I actually have my Kiwa Air-Core Loop (bought years ago when they were actually still being made) connected to my Yamaha RX-V4600 Home Theatre receiver which happens to be able to tune AM IBOC. It actually has a pretty good AM section. There are 3 local Detroit AM stations transmitting IBOC during the daylight hours. Two of them actually sound pretty good, the other one doesn't quite have their IBOC encoding working all that well and has lots of digital artifacts.

The big problem, which kind of defeats the whole purpose is that, even with the help of the Kiwa Loop, AM IBOC cannot be received in "IBOC Mode" except for extremely strong local stations. Thus, even if I want to listen to "clear channel" digital stations at sunset or sunrise from other cities, the IBOC mode doesn't have enough digital signal to "latch on" to the digital broadcast. Thus, all the DX IBOC listener gets is a noisier, inferior AM DX signal, much worse sounding than it would have been without IBOC. I've tried tuning WBZ in Boston (an IBOC station) at sunrise, since they turn on their IBOC earlier than in Detroit (we're on the western edge of the Eastern Time Zone). They have an excellent analogue signal, but there's no hint of any detection of their IBOC signal.

I also have DRM capabilities (a TenTec RX-350 receiver and computer sound card based software). As DXAce reports, the QRN from DRM transmissions to adjacent stations is JUST AS BAD OR WORSE than IBOC. However, since DRM doesn't share "bandwidth" with an analogue signal (as IBOC does), the sound quality of the received broadcasts are vastly superior -- truly FM table radio comparable. In addition, DRM is receivable over DX skywave conditions. I enjoy broadcasts from Radio Luxembourg in the early morning hours in true high fidelity stereo sound. DRM also allows vastly superior coverage with lower transmitter power. Listening to the late-afternoon DRM transmission of Radio Nederland from Bonaire with 5 kW, I get no dropouts and excellent audio quality.

I doubt that shortwave broadcasting has much of a future, even with DRM. Antenna real-estate is just too expensive and environmental laws are stricter. However, those who complain about the QRN from DRM broadcasts should consider that all forms of digital transmission (RTTY, the Russian Woodpecker etc etc) produce horrible levels of interference, and DRM is really no worse.

Well it certainly would be nice if the QRM (DRM) would migrate to a nice little
band of their own instead of QRMing everything else with their excessive

bandwidth.

DRM = QRM

Die DRM, die.

Oh, by the way, I recall folks saying that SWBC was dying 40 years ago.

Guess what? It ain't happened yet.

You might try some heavy duty silicon sealant. "Smeared in a very
smooth bead around the junction of the vertical element nd the case
meet.

I had a similar problem on a home made active antenna that uses a
attachment scheme very similar to the DA100D. I haven't seen the "E"
varient, so I don't know how similar they are. From your discription
they
sound to be nearly the same from an external perspective.

I was kind of shocked when I saw how similar my scheme was to the 100D.
My home brew has been in service for ~30 years. The electronics are
lacking
by todays, or even 1983 standards, but it keeps on working fairly well.
It is
in service at my parents, dad likes toknow the "Exact" time. Before the
net
came along, WWV was about as good as most of us could get.

My refference to 1983 is in regards to the "Burhans" designs in Radio
Electronics of that year. I wish I had known about his designs back
then.

Terry

Value is a subjective thing, Mike. There are radios that were cheap junk
when new that I personally would pay many times their value for one in good
condition.

Kenwood QR-666 receivers don't grow on trees. Very rare model.

Nice German multiband radios sell for good money and are only going to go higher.

That's one of the nicest TW-2000s I've ever seen. Buyer got a quality restored example that deserves a premium price.

So... don't really see your point. Nice items bring premium prices.

Thanks, RHF, but I decided against the H800. From what I've read and
from the opinions folks have provided, I don't see that it would
necessarily give me any advantage over my AOR WL-500 for field use,
except, perhaps, in the 120 and 90 meter bands.

Thank you, though...

Junius.

ATTENTION ALL ! I WILL SELL ANYTHING IN MY COLLECTION AT TWICE WHAT I THINK
IT IS WORTH !!!!

BRING ON THE CASH !!!!!!!!

I HAVE A COLLECTOR CONDITION 666 AND WILL SELL IT TO WHOEVER WANTS IT FOR
$350 !!!!!!!!!!

I think this is really stupid, a collector that pays absurd amounts should
get the original manual and the original box and see a REAL picture of the
radio....NONE of these were in the auction for the 666 !!!!

I totally disagree with you on your answer. the radios in question did not
have all the attributes that top dollar requires, these were stupid
collecors if you could even call them a collector

for top dollar, I demand

the original box
the original manual
no defects

I would value $100 at most for the QR-666

and remember when your car gets totalled the insurance company doesn't give
a #$!@% what YOU think the car is worth !!!!!

you don't know what you are talking about

a very rare radio is

1) the Drake SW-4, only 600 made and I have seen them go for less than this
666 did

2) the Galaxy Hygain R-1530, maybe one a year comes available for sale
anyhwere on the internet

3) Sony CRF-1, maybe 2 a year comes up for sale

4) the american electrola DXC-100, only about 1000 made yet they hve NO
value when they come up !!!!!

I could go on but I will be happy to evaluate any model you want to know
about since you obviously don't know your radios. ESPECIALLY german radios
!!!!!!!!

mike
~~~~~~
the 666 was a mass produced model, NOT very rare !!!!!!

I personally think the H-800 would easily outperform the WL-500 IF you find a quiet spot for it outdoors. I think of the H-800 as being in a different league from the WL-500--and the fact that it can easily be located outdoors is a huge, huge advantage.

But oh well...just my two cents.

[snip]

Radios are a poor long term investment. Young people have less interest in radios than their elders, and the current high prices will insure there will be plenty of radios preserved for those few people who are interested in them in a couple of decades or so.

for those of you that think I am just shooting my mouth off and don't know
what I am talking about here is an incredible offer !!

go to my web site: http://home.comcast.net/~maghakian

find any of my over 100 radios that you think you could find a buyer for.
get me this real high price that you think everything is worth.
I will pay you 10 per cent commission !!!

for instance, find me someone to buy my QR-666 for $375 and I will pay you
$40 !!!!!!!!!!! or my Sany 8880 that actually works (most DON'T) for $400
I have a large german radio section too !!!!!!

this offer is real not BS !!!!

Hmm...lets see. Each of those auctions has a buyer willing to part
with his receiver and and seller willing to buy for dollars. So what
could possibly be wrong.

Do I detect a little jealousy because your collection doesn't quite
measure up to the quality of those receivers?
Or maybe you just thought things were a little slow here and you would
do a little trolling to liven things up.

>

Well, before you get too concerned, you have to realize that although
the radio was "originally" *designed* by Collins (thus making it a
"Collins Original" as stated by the seller) and that Collins did build
many, the gummint let contracts to several other companies to *build*
the radios to Collins specs in later years, including Motorola and
Helena Rubenstein (yes, *that* Helena Rubenstein). However, technically
speaking, it is still legitimate to refer to the 390 as a "Collins"
radio no matter who built it. As Cuhulin often says, "Look it up".

Interesting phrasing. It makes me think that most of your collection
is unsaleable. Condition problems maybe? Or just junk radios.

> get me this real high price that you think everything is worth.
> I will pay you 10 per cent commission !!!
>

Naw. Why don't YOU put YOUR money where your mouth is, although
granted it will take a lot of it. Yes, you put your radios all up for
sale on Ebay and lets see the premium prices roll in. My guess is that
you won't out of embarrassment about the low prices most of them will
bring. Maybe you are a bit jealous over someone who actually has a
really nice nice radio and is able to sell it for a good price.

> for instance, find me someone to buy my QR-666 for $375 and I will pay you

Mike,
Doesn't really matter what you think if you are not the buyer. While
I have seen many radios, and other items, sell for more than I would
think they are worth it isn't worth getting worked up about. If your
concern is that it hurts the fair market value of collectible radios
then articulate that and perhaps offer some posts here on various
collectible radios and what to look for in terms of their condition,
included accessories and price ranges for them. A person with a
collection like yours certainly has some smarts to offer and that
would be appreciated more than your rant(s) on this topic.

Impressive collection, Mike. As a radio collector/connoisseur, I'm guessing that you're much more adept at finding a good deal than a lot of the buyers on eBay, many of whom might lack the knowledge of other venues for purchase and/or lack the patience to wait it out for another chance at the same model sometime later.

The uranium is pyrophoric and upon combustion volatilizes into uranium oxides. The uranium oxides distribute themselves into the local environment. Further distribution is dependent upon the actual local conditions ie. wind, soil moisture, soil acidity, underground water, etc.

I have read one reference where leaching can get the material in the environment. This isn't difficult stuff.

http://www.cnn.com/2005/WORLD/asiapcf/12/17/santa.rampage.ap/index.html

Drunken Santas run riot in Auckland
Saturday, December 17, 2005; Posted: 8:42 p.m. EST (01:42 GMT)

WELLINGTON, New Zealand (AP) -- A group of 40 people
dressed in Santa Claus outfits, many of them drunk, went on
a rampage through Auckland, New Zealand's largest city,
robbing stores, assaulting security guards and urinating
from highway overpasses, police said Sunday.

The rampage, dubbed "Santarchy," began early
Saturday afternoon when the men, wearing ill-fitting
Santa costumes, threw beer bottles and urinated on
cars from an overpass, said Auckland Central Police
spokesman Noreen Hegarty. She said the men then
rushed through a central city park, overturning garbage
containers, throwing bottles at passing cars and
spraying graffiti on office buildings.

One man climbed the mooring line of a cruise ship
before being ordered down by the captain.
Other Santas, objecting when the man was arrested
attacked security staff, who were later treated by
paramedics, Hegarty said. The remaining Santas
entered another downtown convenience store and
carried off beer and soft drinks. "They came in, said
'Merry Christmas' and then helped themselves,"
store owner Changa Manakynda said.

Two security guards were treated for cuts after being
struck by beer bottles, Hegarty said. Three people,
including the man who climbed on the cruise ship
were arrested and charged with drunkenness and disorderly behavior.
Alex Dyer, a spokesman for the group, said Santarchy
was a worldwide movement designed to protest the
commercialization of Christmas

Worrying does not preclude thinking. I know you can't handle too many things at the same time but many people can. Try and grasp the concept.

That is an absolutely GORGEOUS collection! I had to show my girlfriend because she thinks I have too many radios. One other thing. Suzy the mascot... Don't be lulled in to a false sense of security because she is so small and unassuming looking. Dauchunds are very crafty, and always up to something. She is probably plotting how to sell your radios off without you even realizing it. Dauchhunds are very, very sneaky! Watch Out!

Hi

I have a excellent condition QR-666 and paid $88 off Ebay for it. Now that one says it has FM. Mine does too, but you need a separate board for FM and I can't locate one. All it has is the switch for it on it. Even called Kenwood to see if they locate that part and they guy laughed, Said we looked, no go, but you must be kidding. I wasn't :) Neat radio fa sure.

Lucky

I don't recall hearing any Middle East radio with such language, but
the Democratic Peoples Republic of Korea doesn't exactly say nice
things about the US.

I haven't heard them in a while, but I found this schedule, which is
quite old:
http://www.korea-dpr.com/cgi-bin/simpleforum.cgi?fid=06&topic_id=1069056489

I don't get monitoring times anymore, but they would have a more up to
date schedule.

Most of these shortwave services just slant the news a bit, but don't
rant and rave. For instance, Radio Havana Cuba is more fair and
balanced than Faux News.

Message-ID: <1134979933.626692.61070@g14g2000cwa.googlegroups.com>
Source record: 55101

Junius,

Here are two possible reasons for choosing the
LF Engineering H-800 Skymatch Active Antenna
with Fifty Feet (50') of RG-174/U Coax Cable
for Camping and that sort of thing . . .
http://www.grove-ent.com/ANT15.html
http://www.lfengineering.com/products.htm
http://www.lfengineering.com/pdf/Monitoring%20Times%20H-800.pdf

1. Rig a Rope to the H-800 (Top-Up) and use a Tree Limb
to hoise it up in the Air 35'-40' away from everything.

2. Put the H-800 On-Top of a 10' piece of PVC Pipe
that is secured in a One-Foot Hole-in-the-Ground and
is located 35'-40' away from everything.

The AOR WL-500 is a very good In-Door SWL Antenna
http://www.universal-radio.com/catalog/sw_ant/0238.html
http://www.universal-radio.com/catalog/sw_ant/0796.html
http://www.universal-radio.com/catalog/sw_ant/0238sys.html
http://www.universal-radio.com/catalog/sw_ant/0238int.html
http://www.universal-radio.com/catalog/sw_ant/0238.pdf
and for In-Door use would most likely be much better than
the LF Engineering H-800 Skymatch Active Antenna.

LF Engineering H-800 Skymatch Active Antenna is
by design an Out-Side {Out-Doors} SWL Antenna
and in an Out-Side Environment {Location} would
have greater utility for both Fixed and Mobile use.

hey it's just my opinion - iane ~ RHF

But RHC is very fair and balanced compared to Faux News. RHC picks news that suits their agenda, but they don't lie. Faux News uses that "some people say" line to insert their propaganda.

Comparing serial numbers on Wellbrook ALA 100, in a years time they sold 3 of the version sold for North America. Their products are a bit pricey, even more so due to the weak dollar.

Not only do they not have a North America outlet, but their UK outlet doesn't have a secure server. You have to fax your credit card number to the UK.

If you don't mind hacking a bit, the ALA 100 is the way to go. If haven't checked lately, but when I got mine, it was the cheapest and the least expensive to ship. Further, it is very portable since the loop is whatever you DIY rather than some thing as big as a hulahoop.

junius wrote:

We need to send gottahaveit1995 over to your house with an empty trailer in tow and lots of cash.

After much cleansing, your collection would appear at radiomart for sale as entirely mint. All auction photo's would be taken with the nice red velour background. All raidio's would be sold as the "best I've seen".

They would then be instantly worth 4X their normal value.

I agree with Mike. Those are some pretty high prices for some
not-so-special radios. The only exception might be the TW-2000, which I had
my eye on myself but bailed out when the price got too high. It was in nice
shape and you probably won't see another one like it in a long while.

I think Mike's point is that sure, SOMEONE was willing to pay those prices,
but part of this newsgroup is educating people, isn't it?

And it's quite possible to have an R-390A with a Collins Serial # tag
and everything from the front panel back be from a half-dozen
contractors. If you want to have a 4 sure Collins get an R-390.

Did someone say ....Atwater Kent?

I bought 11 of them in an estate sale for 50$ each in 1999....all of them work! I have 4 breadboards and 7 tombstones.

No repro's...all original! I wouldnt part with em for any amount of money!

- Bought one of these recently and it has become my favorite SW radio
.

It's small size makes it a true shirt pocket portable,
enabling me (Ionosphere premitting) to pick up all sorts of shortwave
stuff while walking around.

Since it will pick up Broadcast FM.. - Which my R-75 will not,

I string the portable antenna over to my bed, hook it up &
listen to very far off FM stations whilst reading..

- True, it has no SSB, some frequencies are blocked, and it has no DSP,

- and other " cons" noted in passport..

But it's other features, mentioned above, make it my favorite..

Hopefully, Shortwave development will move more in this direction..

2957. Re: Xmas Present: Ten Tec RX 320D or Radio Labs Super Sangean ATS909 ??

thanks again to all that have responded to my request for information
on high tech low cost sw rx

Presently my thinking is that with all things considered now
including:==>

the Eton E1XM

http://www.grove-ent.com/EX1M.html

the modified RL's 909

http://www.radiolabs.com/products/receivers/super909.php

the winradio 303e (would consider the demodulator)

http://www.grove-ent.com/303E.html

I will likely order direct from Ten Tec the 320d

http://radio.tentec.com/Amateur/Receivers/TT320

and go with the SWlog software with a donation

>>it looks like the best bang for the buck<< as the 303e is 2x the price yet I cannot see the double value (am I yet missing something here with the winradio option??!!)

Paul

Over the many,many years since the advent of Automobiles (including Trucks,too) in America,there have been well over two thousand different names (brand names) of Automobiles made in America.Some of them with neat names such as LuLu,Pop Pop,Octoauto,and many others.Even Schwinn Bicycle once built an Automobile.I suppose,similar to the existing Automobile brand names now being built in America,and the old long,long ago extinct brand names of Automobiles,the Radio industry in America has a similiar History.

My wooden cabinet AM/FM/Shortwave/Phonograph Radio has a pot metal thingy on the front of the radio that says Grundig.I think it is a Majestic model radio.OK,the two little owners manuals/operating manuals/booklets do not say a word about Grundig,the only brand name they mention is Telefunken,,, so,I call it my Telefunken Grundig Radio.One of the little booklets says 1957,which leads me to believe the Radio was manufactured in the year 1957.Take for instance the World War Two era Willys and Ford model Jeeps,long after Willys and Ford stopped building those models of Jeeps after World War Two,Hotchkiss in France was still building the same models of those Jeeps on into the 1960's.Look it up.

For One and All,

Canada's Secret War: Vietnam
http://archives.cbc.ca/IDD-1-71-1413/conflict_war/vietnam/
Vietnam may have been America's "War" but . . .
Canada was heavily involved - from the CBC Archives

Canada's involvement in the Vietnam War
http://dede.essortment.com/canadasvietnam_rgwv.htm
Read about Canada's involvement in the Vietnam War.
Many Americans believe that Canada played not part in
the Vietnam War; nothing could be further from the truth.

IIRC - Any Foreign National who was sent to Vietnam
was granted US Citizenship based upon their current
US Military Active Service/Assignment to a Combat Zone
prior to departure from the USA.

November 11: Remembering Canada's Role in the Vietnam War
- by Robin Collins
http://perc.ca/PEN/1992-11/collins2.html
The fact that Canadian industry supplied $2.47 billion worth of war
material to the United States between 1968 and 1973 through Defence
Production Sharing Agreements. More than one third of all Canadian
defence sales during these years - includinig aircraft parts, shells,
and even napalm - were destined for use in Southeast Asia.

Canada's Direct Involvement in the Vietnam War
include stories about:
http://www.cbc.ca/asithappens/vietnam/
The former head of research for the company
that produced Agent Orange in Canada for
use in Vietnam.

CANADA AND THE VIETNAM WAR
- by Victor Levant PhD.
http://www.geocities.com/Athens/Rhodes/1588/

Canadian Vietnam Veterans and the . . .
Canadian Involvement In The Vietnam War
http://www.vietnamvetcontacts.com/gpage35.html
Canada Played a much different role in the
Vietan War than the current Government in
Ottawa would like us to believe . . .

CBC Rewrites History
Denies Canadian Involvement in Vietnam

http://bluemapleleaf.blogspot.com/2005/02/cbc-rewrites-history-denies-canadian_05.html

* Bombs dropped by B-52s over civilian targets in North Vietnam during
carpet bombing raids were made . . .
* Another example of Canada's direct role in the war with Vietnam was
Agent Orange . . .

oh canada - more than 'you' are willing to admit ~ RHF

2999. ABOUT - WellBrook Loop Antennas - Specifically the WellBrook Large Aperture {8-18 Meter} Active Loop Antenna ALA100

Newsgroup: rec.radio.shortwave
Date: 2005-12-19 19:07:11 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1135019231.017540.174140@o13g2000cwo.googlegroups.com>
Source record: 55058

For One and All,

The WellBrook Large Aperture Active Loop Antenna ALA100
Frequency Coverage : 50 kHz To 30 MHz
ALA100 => http://www.wellbrook.uk.com/ALA100b.html
With the WellBrook ALA100 it is recommended that the
Wire Loop Antenna Element be about 8-18 Meters; which
is about 26 to 59 Feet long. The larger sizes when the
ALA100 is mounted as a Fixed Vertical Loop and the
smaller size when the ALA100 is Mounted on a Rotor.

The WellBrook Large Aperture Active Loop Antenna ALA100
http://www.wellbrook.uk.com/images/laloop.gif
is primarily designed to be set-up as a Out-Side Fixed
Vertical Loop Antenna.

WellBrook Products Info
http://www.wellbrook.uk.com/products.html

* WellBrook Active Loop Antenna Model ALA 1530
http://www.wellbrook.uk.com/ALA1530.html
Frequency Coverage : 150kHz-30MHz = LW/MW/SW
Antenna : One Meter Diameter Aluminium Loop

* WellBrook LFL 1010 Active Loop Antenna Model
http://www.wellbrook.uk.com/LFL1010.html
Frequency Coverage : 10 kHz - 10 MHz = VLF/LW/MW/TB
Antenna : One Point One Meter Diameter Aluminium Loop

* WellBrook ALA 330S Active Loop Antenna Model
http://www.wellbrook.uk.com/ALA330S.html
Frequency Coverage : 3 MHz - 30 MHz = Shortwave Bands Only
Antenna : One Point One Meter Diameter Aluminium Loop

* WellBrook LA 5030 In-Door Loop Antenna
http://www.wellbrook.uk.com/LA5030.html
Frequency Coverage : 50 kHz - 30 MHz = LW/MW/SW
Antenna : Zero Point Seven (70cm) Meter Diameter Aluminium Loop

* WellBrook K9AY Directional Terminated Loop Antenna
Frequency Coverage : 60 kHz to 4 MHz = LW/MW/TB
http://www.wellbrook.uk.com/K9AYc.html
The K9AY Loop Antenna requires two 25 Meter Wire Loop
Antenna Elements set at 90 Degrees from each other using
a common 8 Meter Vertical Support.

http://www.wellbrook.uk.com/images/k9ay.gif

* WellBrook Universal Magnetic Balun UMB130
http://www.wellbrook.uk.com/UMB.html
The Wellbrook UMB130 is a Receiving Antenna
Matching Transformer with a 9:1 Impedance Ratio.
http://www.wellbrook.uk.com/longwire.html
http://www.wellbrook.uk.com/longwire.html
Diagram - Low Noise Longwire Antenna using the
WellBrook UMB130 and Feeder Isolator AFI 1530.
http://www.wellbrook.uk.com/images/antright.gif

* WellBrook Universal Magnetic Balun UMB T2FD
http://www.wellbrook.uk.com/UMBT2FD.html
http://www.wellbrook.uk.com/images/umbt2fd.gif
The Wellbrook Universal Magnetic Balun UMB T2FD
is a Receiving Antenna Balun designed to simplify
the construction of the T2FD Antenna.

Bush violated articles 1 and 3 of the Constitution by reserving the
role of court oversight for himself and writing laws from the oval
office.

Bush violated the wiretapping act of 1965.

Bush violated the FISA Act.

Bush violated the Patriot Act.

Bush had ZERO authority to do what he did. The Congress at no time changed any laws or gave any permission that would allow Bush to break the law requiring court oversight.

3001. Re: LF Engineering H800 Skymatch Active Antenna

RHF,

You're indeed quite right about the potential height advantage w/regard
to using the H800. I think, however, that if I'm stringing something
up in the trees, I'll just take along a Par Electronics EF-SWL antenna.
I have a friend who has used this antenna for portable outdoor
applications, and he's had excellent results. So, I think I'll go that
route, if taking a bit of extra time to put up an antenna at some
height.

Best,

Junius

PLONK!

3009. (OT) : Jack Anderson was Great because . . .

Newsgroup: rec.radio.shortwave
Date: 2005-12-19 21:29:16 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1135027756.869203.4290@g47g2000cwa.googlegroups.com>
Source record: 55069

CARL - 'your' post is so typical of the Liberal-Mind-Set.

Jack Anderson was Great because of his Being on
the Nixon Enemies List and his connection to Nixon . . .

Think About It - Doing this diminishes Jack Anderson and
Elevates former us president Richard M. Nixon to Greatness.

G. Gordon Liddy is "Important" because of his association
with "WaterGate" : The Liberal Code Word for Everything Evil
about President Richard M. Nixon and all Republicans who
are by nature Bad-to-the-Bone.

Think About It - G. Gordon Liddy is a little inconsequential
man who's only claim to fame is his association with former
us president Richard M. Nixon.

Liberal Democrats and the Left-Wing Media instead of making
former us president Richard M. Nixon a non-person and a foot
note in history : Continue to Elevates former us president
Richard M. Nixon to Greatness by forever bring-up the Topic
of WaterGate. The Liberal Obsession with former us president
Richard M. Nixon ASSURES "His Place" and Greatness-in-History.

The Vietnam War and the Liberal {Anti-Nixon} View Point :
What is also very interesting is the fact that Liberal Democrats
like John 'ff' Kerry and the Left-Wing Media try to make the
Vietnam War into NIXON'S WAR : Vice 'the truth' that it was
President John F. Kennedy got us into Vietnam and then
President Lyndon B. Johnson Escalated the War in Vietnam
and "His" lack of Political Resolve to Win the War caused him
to not seek a second term as a result of "His" Errors in Handling
what was in-fact "His" Vietnam War. Nixon for the most part
inherited the Vietnam War and also managed it badly; but was
able to get the US out of Vietnam and End the War as a result.
BUT TO THE LIBERAL'S AND THE LEFT-WING MEDIA
THE VIETNAM WAR WILL ALWAYS BE NIXON'S WAR [.]
[One More Liberal Lie and Left-Wing Distortion of History.]

3011. Six station C cell recharger?

Newsgroup: rec.radio.shortwave
Date: 2005-12-19 21:38:03 UTC
From: Hatfield <utility_infielder@earthlink.net>
Message-ID: <1135028283.051105.36420@g47g2000cwa.googlegroups.com>
Source record: 55071

I have a mint Grundig Satillit 400 (no its not a Yacht Boy).

Which runs on six C cells.

I would like to find a recharger that will charge six C cells all at once.

Well, I could buy two Rayovac rechargers (each of which can charge up to four C cells all at once),

And I could then recharge two sets of three cells at the same time.

But I'm afraid that one recharger might charge up three cells to a slightly higher voltage than the other charger does its three cells.

And that might well cause serious overheating of 3 cells when playing the radio :(

Even damage the Satillit?

Hopefully somebody sells a six station C cell recharger?

>

Well, ok I'll be the first to ask. How is this group educating people
about prices of radios on Ebay.

So far all I've seen on this forum are a small group complaining
amongst themselves about how expensive radios are. Not a whole lot of
educating going on that I've read.

Because Ebay allows many buyers and sellers to come together and
determine an equitable price, I think it is a far better measure of the
true value of a radio than the frustrated few collectors on
rec.radio.shortwave. You and others may not like it, but Ebay is a
marketplace and it works to establish a true market price.

>interference and additionally you can move the bandpass control to that
>same sideband. The 7030+ demodulates and syncs to both sidebands and you
>can only move the passband control.

But what happens when you set the 7030+ to a narrow bandwidth, to only cover the desired sideband? Does it sound better or worse than a R8[XYZ] set to a wider bandwidth and using the "I/Q"/"Phased"/"Image reject" mixer to cancel out the undesired sideband?

As I understand it, an I/Q mixer typically is good for only about 40 dB of rejection. Is that better than the skirts on a good narrow filter?

(I could have used another 40 dB this morning. The BBC at 16:30 on 7160 was getting stepped on by some other signal. Probably something in India on the greyline. So I used 3915 kHz, except that some of the local ragchewers were s9+30 about 10 kHz up, and the 6 kHz filter in my R-1000 couldn't cut it).

Eisenhower.

''The mission of the first American Special Forces in Vietnam was to
train fewer than one hundred Vietnamese soldiers. The first training
center was in Nha Trang. The Americans arrived from Okinawa in the
summer of 1957, and by 1960 they were training more than fifty Ranger
units of the Army of the Republic of Vietnam (ARVN). Although this
aspect of the advisory experience began in the Eisenhower presidency,
it was greatly expanded under the keen interest and direction of
President Kennedy later.

After the French left, and prior to Kennedy's inauguration, the U.S.
role expanded due to several
considerations. Defending the Republic of Vietnam became a direct
burden of the U.S. It became a battle within the Cold War. Eisenhower,
a great believer in the domino theory, led the nation into new
commitments -- training of counterinsurgency Vietnamese troops,
nation-building efforts on a broad scale, and the placement of our
nation's largest diplomatic corps in Saigon. We assisted the southern
Vietnamese in a battle for the "hearts and minds" of the people by
means of a Strategic Hamlet Program. In addition, as Herring shows
with statistical evidence, we pumped more and more foreign and
military aid into South Vietnam.

However, under Eisenhower, we avoided a wider war in 1953-54, and our deepening commitments remained limited in contrast to later escalations under both presidents Kennedy and Johnson. We may have had more than 1,500 Americans in South Vietnam by 1961, and our Saigon mission was the largest in the world.''

Source record: 55078

eBay does not ALWAYS establish a true market price, but you're right; by and large it is the way prices are determined on used radios. But you'll always have the auctions that fall into one end or another of the bell curve. I think that was Mike's point. Hey, look at these abnormally high prices. Would you have less objection if people pointed out the other end of the scale? Hey, look at this radio that somebody got for a STEAL! I don't think Mike was "complaining", just pointing them out to the group.

And while I don't have as many radios, the number of years in the hobby, or the breadth and depth of knowledge that Mike has, believe me when I tell you there are no "sour grapes" about someone else getting these radios. I have enough radios and have enough experience with eBay to know that if the bidding goes higher than I think a radio is worth, it's OK if I back off and let someone else have it. I just wait for something else to come along. That's part of the fun. I already have all of my "must own" radios.

Perhaps this thread would be better continued if we posed the questions: "What makes a radio worth paying a lot of money for?". How do you define "a lot of money"? Is it defined as paying more than the radio cost new? How much more? How do you weigh scarcity vs. performance, i.e. if a radio is rare but performs poorly, is that better than the other way around? Example: Would you pay more for a Hallicrafter TW-2000 than a Kenwood R-5000?

Why would they do that? The Communist Party isn't as stupid as you beleive.
They will be happy to build sets that you sell for $140 while they sell
their version
domestically and over the internet at a fraction of the price, at a loss
mind you.
This is done with many products in China to keep the branding company off
its turf. It makes money manufacturing for foreigners and sells the same
product
domestically at a loss.

In a few years you will begin to see Chinese branded products marketed
by Communist Party owned enterprises here in the U.S. They will bypass
your western marketing companies and sell direct to you at a cheaper
price than anyone. Even Wal-Mart. The Communist Party recently sponsored
and held a trade show in New York for just such a purpose.

> Sony is the last of the significant manufacturers to bail out of the
> shortwave receiver market. The market for shortwave radios was never
> large, and it has shrunk to a tiny fraction as we all know.

There are at least 3,000,000,000 people living within China and India alone.
Few if any have given up their shortwave radios. It is simply your narrow
western veiw of the shortwave market that clouds your mind.

> If a chinese SWLer wanted an Eton product they would just have to buy a
> Tecsun or Degen. I'm at a loss as to why a chinese national would want
> to pay the inflated Eton prices.

They don't have to like you say. They buy the domestic version cheaper
than the price of your dinner.

> Not many Sony shortwave radios to be found in chine bcause they are not
> making any.

Huh?

> And because China hasn't opened it's market to outside
> products.

D'oh! That's a revelation?

> Not unlike Japan and the good old USA with their import
> duties.

Import duties on Eton, Sony, Tecsun, Kaito, Degen Kochibo... radios?
I think your lieing.

> Still, I've seen more than one chinese SWL's website with
> extensive collections of radios that include several old Sony and
> Panasonic radios as well as numerous chinese brands.

Re-read what I posted. But you go to China and try to amass the same
collection and see how many years it takes on an average salary of $400 a
month.

> I'm completely missing your point here. You seem to be trying to prove
> some sort of chinese conspiracy....

Your completely niave and ignorant of Chinese business practices.
For that reason they would love to be your partner.

> >
> > Be careful on what you spend your hard earned money.
>
> For sure. That's why the Degen DE1103 from a chinese seller is such a
> great buy!

It's a great buy because they are dumping a product assembled by slave
labour.
If it continues you will soon be able to buy ONLY Chinese radios. At which
time they may decide to limit the tuning to only a select few of CRI
frequencies.
YOUR HOOKED!

Unrevealed Source wrote:
> eBay does not ALWAYS establish a true market price, but you're right; by and
> large it is the way prices are determined on used radios.

With the exception of a situation where the buyer uses shills and never
closes a sale, Ebay very definitely establishes a market price. And
the sale prices are far more representative of real value than the
stickers some guy has pasted to his pickup-truck full of old iron at a
hamfest. Given the number of buyers and sellers that see and bid on
the goods Ebay is a lot closer to a perfect market than a couple of
guys posting FS postings on rec.radio.shortwave.

But you'll always
> have the auctions that fall into one end or another of the bell curve. I

Let's try it another way. What is an abnormally high price. Is it one
that occurs off ebay? Or is it one that is too high for another
prospective buyer.

> And while I don't have as many radios, the number of years in the hobby, or
> the breadth and depth of knowledge that Mike has, believe me when I tell you
> there are no "sour grapes" about someone else getting these radios. I have

> much more? How do you weigh scarcity vs. performance, i.e. if a radio is
> rare but performs poorly, is that better than the other way around?
> Example: Would you pay more for a Hallicrafter TW-2000 than a Kenwood
> R-5000?

The reasons SWLs demand radios like the R-5000 as pure listening
devices are completely different from the reason collectors demand say
a Zenith TO and it really isn't possible to compare the two. We all
know a radio like an R5000 will run circles around most any tube radio
that is still working, but the R5000 looks positively sterile to a
collector of old wooden tabletops. Some people are willing to pay
upwards of $40k for a wooden case floor model radio with tubes, and I

say more power to them if that is where their collecting interest is. And others are willing to part with big bucks for old boat anchors like the R390a and HRO series.

The less we try to inflate our self-sense of collector expertise by bashing the purchasing decisions of others the better off we all will be. It might actually be possible to enjoy one-anothers collecting interests, different though they might be.

Gee first site u posted http://www.vor.ru/English/JAdamov.html
says:

We are sad to inform you that after a long illness, our colleague and
friend - Joe Adamov passed away.
In 1942, at the age of 21, after graduation from Moscow's Pedagogical
Institute, Joe came to work as an announcer at the foreign language service
of Radio Moscow. In due time he became a top-class journalist. He had no
holds barred to him. He interviewed ambassadors, government ministers and
top officials of foreign states. For over 40 years had Joe hosted one of the
most popular programs with the Voice of Russia English language service -
Moscow Mailbag. His profound knowledge, all-around education and versatile
knack for the English language helped Joe handle any questions, including
tricky ones.
His keen sense of humor always enlivened his answers and appealed to his
listeners. Joe was frequently invited to visit overseas, where he gave
lectures and participated in popular talk-shows in the United States,
Canada, Britain and Australia. He was recognized by moguls of international
journalism, such as Walter Cronkite, Phil Donahue, Larry King.
Joe was also greatly respected in our office. Over many years of his service
with us he trained several generations of professional announcers,
translators and journalists. We will miss greatly his kind advice and
instructions.
Joe Adamov has made a great contribution into this country's foreign
language broadcasting and was bestowed multiple government awards. With
millions of our English-language listeners we mourn our dear Joe.

Now you have a different link with a different set of info.

http://www.vor.ru/index_eng.phtml?act=6257

I will concede that the second site is new in nature and has a different
date which may be more accurate. I will let the readers here decide. I can
only know what u post until u post yet another piece that shows more info
than the first.

I would have read your mind the first time had I known what its lil twisted
neurons were doing. I figure an intellect like yours would be an easy read.
I mean you have an easy time with small four letter words or basic gutter
language but seem to have problems with larger words such as Freedom,
Liberty, Equality, and Fraternity. too many syllables for you I am sure.

I would go on but by now you have the dictionary open figuring out those 4
words. You do own a dictionary don't you Mr. Ace? If you don't it would make

a nice Christmas present for you from your friends or family.

Merry Christmas Mr Ace and a Happy New Year.

Source record: 55161

toTaLhAt,

Gee - Another Democrat Party of the USA Sock-Puppet Posting
an Off-Topic Political Message to a Shortwave Radio NewGroup.

Wow - I Am All Excited - Howard Dean's "Scream It To The People"
Daily Talking Points from the DNC {Democrat National Communtern}

Howdy - At Least Put and (OT) : at the start of the Subject Line.

toTaLhAt - So 'you' are the latest Democrat Party of the USA
Sock Puppet to post what appears to be Today's Daily Talking
Points from the DNC.

toTaLhAt - All good points - But they add-up to another set of
Democrat Party of the USA "Half-Truths" {Political Lies} .

toTaLhAt - And just what is the other "Half-of-the-Truth ? "The Truth"

toTaLhAt - "The Truth" is Public Law 107-243 [.]

Oh Yeah - toTaLhAt - Public Law 107-243

You Remember Public Law 107-243 Don't you 'toTaLhAt' ?

Or have you conveniently forgotten Public Law 107-243 ? ? ?

Public Law 107-243
TITLE : "Authorization for Use of Military Force Against Iraq
Resolution of 2002" -aka- A DECLARATION OF WAR !
http://www.whitehouse.gov/news/releases/2003/03/20030319-1.html

Speaking of War and the War-on-Terror against the Islam-O-Fascist :
Have you forgotten like most of the Members of the Democrat Party
of the USA the Events of "9/11" and that about 3000 Americans
were Killed on that Day by the Islam-O-Fascist ? ? ?

AMERICA REMEMBER "9/11" - NEVER FORGET !

Name one Democrat besides Joe Lieberman who Publicly
stands up for the Defense of America against the Terrorists.

DEMOCRATS REMEMBER "9/11" - NEVER FORGET !

The Democrat Party of the USA has become the Champion
of the Civil Rights of the Foreign Terrors against the very Lives
of American Citizens.

WAKE UP DEMOCRAT PARTY OF THE USA
YOU EXIST TO PROTECT THE LIVES OF EACH
AND EVERY AMERICAN CITIZEN FROM ALL
ENEMIES BOTH FOREIGN AND DOMESTIC -
Not to Protect the Rights of Foreign Terrorists
and Put the Lives of American Citizens at Risk.

THE PRESIDENT REMEMBERS "9/11" - HE WILL NEVER FORGET !

1 - The President George "W" Bush Did The Right Thing As
The Commander-in-Chief of the US Military in Time of War.

2 - The President George "W" Bush regularly informed the
US Congress of these War Time Activities.

3 - The President George "W" Bush is Acting to Protect
the Lives of American Citizens - The Greatest Civil Right of
All is LIFE - Without Life - All other Civil Rights - Our Freedoms
as American Citizens of the have No Meaning.

so say i - my opinions stated as facts ~ RHF

Rather than stand resolutely in favor of their essential liberties by
enduring the possibility of terrorist attack, cons are sniveling
cowards who spit upon the graves of the tens of thousands of Americans
who DIED to earn us these freedoms by giving them away so easily.

"Those who would sacrifice essential liberties for temporary safety
deserve neither liberty nor safety."--Benjamin Franklin

I suspect that the problem here may lie in the standard practice of writing obituaries for celebrities sometime before their deaths. The obit in the first post could well have been written back in 2000, anticipating that Mr. Adamov would be passing sooner than he did. From what I have been able to track down, he was still doing the program well into 2004.

This is a wonderful little radio! I've got one and love it. Actually I offered it up for trade a week or two ago on this list and am glad that I didn't take up any offers I had on it. (My Icom IC-R5 works better at work due to the extra volume) I use the Degen for walking the dog and XC skiing.

The 1105 is just a very sweet looking and performing radio for the size. I ordered mine from Lipyn, which someone already suggested. Here's a link to it http://cgi.ebay.com/NIB-DE1105-FM-MW-SW-DUAL-CONVERSION-RADIO-DEGEN_W0QQitemZ5843504780QQcategoryZ15051QQcmdZViewItem

I've found the service from Lipyn to be very good, and have also ordered a Degen DE-31 active loop antenna from them that works better than the standard 23 ft plug in or clip on external antenna.

No, it doesn't have SSB, but it is dual conversion. I have yet to check this out repeatedly, but mine does work "out of band" but only with manual tuning.

The only annoying thing for us on the U.S. side of the pond is that the temperature read out is only in Celcius.

Keep in mind that for all practical purposes DU is not radioactive. It
has a half life about on par with K40, which is about 30% of the
Potassium in your body. The hazard with DU is as a heavy metal, just
like Cadmium, Chromium, Barium etc.

I was searching around some Russian Journals and found a reference to
him dated June 2005 so he was alive at least up to last June.

Yo buckwheat...you were the one who said the commies were trying to
drive Eton out of business. Eton is nothing more than a distributor
and marketer of Degan/Tecsun products. Just a warehousing and order
operation and nothing more. If Tecsun/Degen wanted to kill of a major
distributor of their products as you stated then they would
do so by cutting off the supply of radios.

Really. Now that is indeed interesting. I catch the shuttle to NYC on
business regularly. I don't remember any convetion of the Chinese
Communist Part having been held in NYC in the past 5 years. Maybe it
was really small - almost microscopic. Or more likely it was just a
figment of your imagination.

> Few if any have given up their shortwave radios. It is simply your narrow
> western veiw of the shortwave market that clouds your mind.

The worldwide market for shortwave radios has all but collapsed. If it were otherwise then Sony. Panasonic, Sanyo, Kenwood, Yaesu, Icom, etc., would still be in the market merrily selling shortwave radios. Fact is there is not enough demand to justify production of HF receivers. The chinese are satusfying any domestic demand for shortwave. But the fact is chinese consumers will turn rapidly to domestic broadcast, Ipod, internet and satellite for radio transmissions. Just like the rest of the world.

>

Then why did you say the chinese were being prevented from owning an Eton. Your original statement makes no sense whatsoever.

>
> > Not many Sony shortwave radios to be found in chine bcause they are not
> > making any.
>
> Huh?

Put simply so that you can understand, Sony has backed out of the shortwave market. Expect that they will drop the 7600 very soon. As mentioned previously there is a fundamental reason Sony along with all other significant manufacturers of shortwave radios have dropped out of the sortwave radio market over the past 20 years. It is called no demand for the product.

> I think your lieing.

The good old USA like most other nations extract import duties on a wide range of consumer products. I'm not lieing, nor am I lying, nor am I liing, nor am I lyeing. Hint: the correct spelling is lying and in that sentence you should have used you're rather than your.

Had a tough time in school I take it.

> month.

There are numerous SWL clubs in china. I have been to China, but not
to buy shortwave radios. Someone making $400.00 per month in China
would be reasonably well off actually. But still they probably would
not be interested in spending food money of frippery like shortwave
radios. But low income people in the US are faced with the same
decision - food or fun. How many collecitons of shortwave radios do
you suppose there are in Appalachia or southeast DC.

>

> time they may decide to limit the tuning to only a select few of CRI
> frequencies.

I have no idea what dumping means. They are selling it at a profit
because their cost of production is much lower. And we do like our
bargains don't we. That's why places like WalMart and Home Depot do so
sell. They buy much of their products from the lowest cost
manufacturer which happes to be China for now. We have also looked to
Eastern Europe, India, Indonesia, Korea and Japan for cheap goods.

No kidding!! It still scares the crap out of me that such an idiot
is the president. We couldn't have hired an actor with poorer
verbal skills. He can't communicate a simple response. We do
understand the "deer caught in the headlights" look, however.

David - Per your two links :

One RF Junkie SWLZ Balun = $16.50

45 Feet (#14 AWG @ 45/100 x $70) = $31.50

Total Cost $48

PAR EF-SWL Antenna = $58

I doubt you could do anything to nicads that you charge outside the radio that in turn would damage the radio when used. If anything, nicads/NiMH have a lower voltage than alkaline cells, and the radio certainly was built to handle alkaline batteries.

Now it is possible that your radio can ruin your rechargeable batteries if they are discharged too deeply.

3095. ABOUT USING - The Par Electronics End-Fed Shortwave Listener EF-SWL Antenna : In-the-Attic ?

Newsgroup: rec.radio.shortwave
Date: 2005-12-20 09:30:00 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1135071000.160403.263800@g47g2000cwa.googlegroups.com>
Source record: 55004

Robert 11,

The Par Electronics End-Fed Shortwave Listener EF-SWL Antenna
will work in your Attic. And the Inverted "L" Antenna configuration
is generally a good choice to use with a the Par EF-SWL Antenna
for a "Low Noise SWL Antenna" using the 'design concepts' that
were popularized by John Doty.

Often enough I have written {Fingers On Automatic Typing}
CONSIDER BUILDING A "LOW NOISE" ANTENNA:
Try building an Improved SWL Random Wire Antenna that uses a
9:1 Matching Transformer (Balun / MLB) then you may not see
any real 'improvement' in your receive signal.
This is the so called "Low Noise" SWL Antenna.
Three "Must" Links to Read -wrt- Low Noise SWL Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/949
[Please READ These Three Links]
http://www.anarc.org/naswa/badx/antennas/low-noise_antenna.html
http://www.anarc.org/naswa/badx/antennas/SWL_longwire.html
http://www.anarc.org/naswa/badx/antennas/grounding.html
ABOUT THE "LOW NOISE" ANTENNA 'DESIGN CONCEPTS':
A Random Wire Antenna Element coupled via a 9:1 Matching
Transformer at the Near-End of the Antenna with a Ground
Rod and Coax Cable Feed-in-Line to the Receiver. This is
the basic SWL Antenna that uses the "Low Noise Antenna"
'design concepts' that were {popularized} by John Doty.
.
And the SWL type of Inverted "L" Antenna is is a really good
recommendation for an Out-Side Wire Antenna. But . . .
there is a better SWL Antenna configuration for an In-the-Attic
Antenna. And that Antenna is... The Horizontal [Flat] Loop Antenna.

WHY NOT - The Inverted "L" Antenna In-the-Attic ?
1. The Attic Antenna does not need the Vertical-Up-Leg of
the Inverted "L" Antenna because the Wire Antenna Element
is already elevated and the Coax Cable Feed-in-Line is used
to accomplish what the Vertical-Up-Leg did in Elevating the
Main Part of the Antenna.
2. Because of the In-the-Attic Location a Separate Out-Side
Remote Ground for the Antenna Feed-Point is not practical
and because of the Starting Elevation of the Wire Antenna
Element In-the-Attic the Ground Wire tends to be very long
and is often very ineffective as an RF Ground. For most
In-the-Attic Antennas the Radio Shack's Ground and properly

Bonding IT to the House's AC Electrical Power Ground is the
Primary Ground for All the Radio Equipment and the In-the-Attic
Antenna. The Outer-Shield of the Coax Cable Feed-in-Line is
the Main path for Ground between the Radio Shack's Equipment
and the in-the-Attic Antenna.
3. We are then simply left with the Wire Antenna Element
within the Attic Space. What is the Best Shape {Configuration}
for this Wire Antenna Element within the confines of the Attic.

A FEW POSSIBLE CONFIGURATIONS OF . . .
AN IN-THE-ATTIC ANTENNA :
1. Simple Straight Horizontal [Flat] Random Wire Antenna
along one side or across a diagonal of the Attic.
2. Bent Horizontal [Flat] Random Wire Antenna along one side
and then along another side of the Attic. [Flat "L" Antenna]
3. Square/Rectangle Horizontal [Flat] Random Wire Antenna
running along and around all four sides of the Attic.
4. Off-Center-Fed Windom Antenna which is again a form
of Horizontal [Flat] Random Wire Antenna with a Feed Point
near the Middle vice at one end or the other.
5. Horizontal [Flat] Loop Antenna which is again a form of
Horizontal [Flat] Random Wire Antenna with the Wire Antenna
Element running along and around all four sides of the Attic.

PLACEMENT OF THE WIRE ANTENNA ELEMENT
WITHIN THE ATTIC SPACE :
1. The Wire Antenna Element in most instances should not be
place on the Floor of the Attic with it potential to pick-up more man
made noise due to it proximity to Household AC Electrical Wiring.
2. Except for the Simple Straight Horizontal [Flat] Random Wire
Antenna. The Wire Antenna Element most likely would not run
along the Under-Side of Peak of the Attic Roof.
3. What is Left ? For the Placement of the Wire Antenna Element
inside the Attic ? Look-Out ! & Reach-Out ! The Natural Place and
the Right Placement for the Wire Antenna Element in the Attic is
about Shoulder-to-Eye High above the Attic Floor. Here is Easy to
Work-On/At with the Hands and Eyes and it is Off the Attic Floor;
but not Over-Head. Also, depending on the Pitch of the Attic Roof
the Area to Work-In at this Height is usually still relatively large.
Note - That this also places the Wire Antenna Element about Five
Feet (5') above the Attic Floor and away from most of the Attic AC
Electrical Wiring.

SOMETHINGS ABOUT THE PAR EF-SWL ANTENNA :
1. The Matching Transformer has a 9:1 Ratio and is made-up of
Two Separate Internal Winding that can be configured by the User.
2. Looking at the Matching Transformer Box with the SO-239
Connector facing you there are three Terminals on top of it.
* On the Left is Terminal # 1 is the SO-239 Connector's Outer
Threaded Mechanical Surface which is the Coax Cable's PL-259
Connector's Shield Connection. (Terminal #1 is the Coax Shield)

* In the Center is Terminal # 2 which is the Ground Lead End of the Antenna Side of the Matching Transformer.
* On the right is Terminal # 3 which is the Wire Antenna Element End of the Antenna Side of the Matching Transformer.
This has the Wire Antenna Element attached to it when the Matching Transformer comes from Par Electronics.
Note - That when the Matching Transformer comes from Par Electronics Terminals # 1 and # 2 have a Jumper Wire between them : Making both the Coax Cable Shield Ground and the Antenna Ground "Common" {Joined} to each other.
FWIW - This type of Matching Transformer is usually called an UnUn and also often marketed as a Magnetic Longwire Balun (MLB).
3. The Three Terminals on the Par EF-SWL Antenna's Matching Transformer give it a greater utility then most Baluns and UnUns being marketed; and allow the User to Configure the Matching Transformer to their individual requirements due to limitations, location and other factors.

THREE POSSIBLE CHOICES FOR AN IN-THE-ATTIC ANTENNA USING THE PAR EF-SWL ANTENNA :
1. Straight Horizontal [Flat] Random Wire Antenna along one side or across a diagonal of the Attic. This is the simplest to do and easy to lay-out; and most often used.
2. Square/Rectangle Horizontal [Flat] Random Wire Antenna running along and around all four sides of the Attic. When you have a small Attic Space or are limited by man made noise sources to using only part of the Attic; then this may be your best Antenna Shape - All-Things-Considered !
3. Off-Center-Fed Windom Antenna which is again a form of Horizontal [Flat] Random Wire Antenna with a Feed Point near the Middle vice at one end or the other. Remove the Wire Antenna Element from Terminal # 3 of the Matching Transformer. Measure-off 17 Feet from the Terminal-End of the Wire Antenna Element and carefully remove about One Inch of Insulation from the Wire. Wrap a Full-Turn of the Bare Wire around Terminal # 3 and Secure it with the Nut and Washers. You now have a Windom Antenna with a Short 17 Foot Arm and a Long 28 Foot Arm. The Windom-in-the-Attic is recommended when the Radio Shack is in the center-middle of the House and you are trying to keep the Coax Cable length as short as possible because of the locations of man made noise sources within the house and in the Attic.

"MY CHOICE" FOR AN IN-THE-ATTIC ANTENNA USING THE PAR EF-SWL ANTENNA :
The Horizontal [Flat] Loop Antenna which is again a form of Horizontal [Flat] Random Wire Antenna with the Wire Antenna Element running along and around all four sides of the Attic. Now ideally the Matching Transformer for a "Receive Only" Loop Antenna would have a 4:1 Ratio; but 9:1 isn't bad when you are using 'what-you-got' to 'get-the-job-done' : KISAP !

HOW TO CONFIGURE - The Par EF-SWL Antenna's Matching
Transformer for a Coax Cable Fed In-the-Attic Horizontal [Flat]
Loop Antenna.
1. Remove the Wire Jumper between Terminals # 1 and # 2.
[The Coax Cable's Shield is the Ground Path for this Antenna.]
2. Remove the Insulator form the Far-End of the Wire Antenna
Element of the Par EF-SWL Antenna. Carefully remove about
One Inch of Insulation from the Wire. (Add a Round Terminal if
you wish to this end.) Connect (Attach) this Far-End Wire to
Terminal # 2 of the Matching Transformer by Wrapping a Full-Turn
around the Terminal and Secure it with the Nut and Washers.
3. Rig the Loop's Wire Antenna Element to suspend it from the
Attic Roof and out of the way.
Results - You now have a 45 Foot Around Horizontal [Flat] Loop
Antenna In-the-Attic.
Alternative - "Longer" Wire Antenna Element can be used with the
Par EF-SWL Antenna In-the-Attic. Simply Lay-Out and Rig whatever
size Horizontal [Flat] Loop Antenna you can make in your Attic and
connect the End of the Wire Antenna Element to Terminals # 2 and
3 of the Matching Transformer.

Enjoy your In-the-Attic Shortwave Listener's (SWL) Antenna using
the Par Electronics End-Fed Shortwave Listener EF-SWL Antenna.

for now - enough is enough - iane ~ RHF

I understand and respect your point of view, and by and large I agree. But let me ask this. Suppose a couple of people bid up the price of a Radio Shack DX-100, and one of them ends up paying $350 for it. Wouldn't you be the first to say that they overpaid? Remember it only takes a couple of people to get in a bidding war with each other. That doesn't mean it is the fair market value - it just means two people wanted really, really bad and were unwilling to wait for another one to come along.

''Over the weekend, at least two reports out of mainstream Florida papers -- one in the Miami Herald and one in the Tallahassee Democrat -- report that Gov. Jeb Bush himself is now questioning the reliability of Florida's electronic voting system in light of the recent hack test in Leon County, home of the state's capitol Tallahassee. That security test, carried out last week, successfully flipped the results of a simple mock election test held on Diebold, Inc. voting equipment. The hack, which changed the results of an election from 2-6 to 7-1, left no trace of evidence behind.''

It is one thing to say that you or I would feel that we had overpaid
had we bought a DX-100 for $350.00. It is quite another to say tht
someone else overpaid at that price. Clearly we don't know what
motivated that buyer but it is a certainty that he feels that he didn't
overpay. Having owned a DX-150b I can safely tell you that I would not
be interested in a radio of that series again at any price over $10.00.

Jumping into the middle, some people would not blink twice at paying
$1,000.00 for a nice Japan Radio NRD 505. Not me, because I wouldn't
give it a second thought. But the NRD collector would most likely be
quite happy with his purchase.

Going to the other extreme I would feel I overpaid had I bought a
one-of-a-kind $40,000 wooden cased floor radio from the 1930's. And
yet as we all know there are collectors of old radios that would not
blink at the dent such a purchase would make in a radio buying budget.

We are better off knowing what radios we are interested in, what our
radio buying budget is and how much we are willing to pay for a given
radio and sharing those facts. But lets stay away from criticizing the
buying habits of someone else by listing links to ongoing and closed
Ebay auctions and laughing at them. Who knows we might actually entice
a few lurkers to participate on rec.radio.shortwave.

Good to see another Patriot. The founders sacrificed everything they
had, as did Washingtons Army. They could have gone on ''safely'' and
''securely'' forever but they chose to be rid of their tyrannical
''protector''.

The Declaration of Independence was written especially for Bush and
Cheney.

Hi

I bought a 8 way AA AAA battery recharger on Ebay for like $15. You have to do a search for them on Ebay. Here is one. Looks like it does 4-6 batteries. I think 4 only though. I would FIRST write the guy and ask plenty of questions about it. He says it does NICD batteries and that's about it but it recharges many types. They charge a little for the item to avoid Ebay fees and charge all their profits in the shipping costs. Here's one I found.

http://tinyurl.com/d9kpq

Here's another that looks good to me.
Just ask the seller how many it can do at once. Good luck and happy holidays.

http://tinyurl.com/7jb6z

Bye Lucky

The Ansmann Energy 16 will charge 6 C cells simultaneously:

http://www.thomas-distributing.com/ansmann_battery_charger_5407013.htm

I own two of these and have been pleased with them. Excellent
performance and built like tanks.

The Maha MH-C808M will charge 8 C cells simultaneously:

http://www.thomas-distributing.com/maha-mh-c808m-battery-charger.htm

I've not used this charger, but I've used its close cousin the MH-C801D
(an AA/AAA-only unit) and been well satisfied.

Both of these are smart chargers that switch to trickle when the primary
charge finishes. Both have a conditioning function as well. Good stuff.

No connection to Thomas Distributing other than being a satisfied customer.

> the radio :(

Not a concern on the front end of the charge; NiMH batteries are
forgiving of slight voltage differences between them. What you do have
to watch out for is on the back end when they're nearly discharged,
because the stronger cells can keep trying to pull current through the
weaker cells and damage them permanently. Even that's not all that
likely though, if you use identical cells that have had similar lives
(roughly the same age, roughly the same duty, etc.).

I have another suggestion for you as well. Good-quality AA NiMH cells
are up to 2500-2600 mAh. You might consider getting some C-to-AA

adapters and running your radio on AAs. You can get a smaller, less
expensive charger then; the cells themselves are considerably cheaper;
and I suspect life would be more than acceptable.

Hey all.
I've been out of SW for about a year or so.
I have an Icom R75 which I absolutely love and have been starting again to listen at night.
Also have a Grundig Yachtboy 400 which I also love.
However, I'd like a really small portable SW radio also to round out the stable.
Was at Radio Shack last night and saw some new (to me) Etons and Grundigs.
One, in particular, caught my eye.
I think it was the Eton 100.
It was tiny.
Are there any review sights out there where I can read a review of this and other SW radios?
Any of you purchase this radio?
How's its performance compared to my Yachtboy?
Thanks all and I hope to participate more in this newsgroup.
Lenny

Also, Yahoo has several discussion groups that are focused on specific receivers or manufacturers. Simply search for Icom, Kenwood, Degen, Tecsun, etc.

Good luck.

I use a Sony ICF-SW07 which I like for its worthy performance and compact size. But the 'SW07 is rather pricey when purchased new. And it's a tad larger than the Eton E100 (note, the E100 is also sold as the Tecsun PL-200). If you liked what you saw with the E100, you might also look at the Degen DE1105 which is more competitively priced, although you would have to order directly from Guangzhou, Guangdong, China:

http://froogle.google.com/froogle_cluster?q=de1105+degen&pid=4867224877358160558&oid=18434352613598321121&btnG=Search+Froogle&lmode=&addr=&scoring=p

If I were choosing between the E100 and the DE1105, I would probably go with the DE1105, based on what I have read. From what the reviews suggest, the DE1105 would probably be much more resistant to overloading and images. One drawback to the DE1105, however, is that coverage is from 5800-26100 kHz; so you'd be compromising on the tropical bands, if you went this route. I'm sure neither will offer you a performance quite on a par with the Yachtboy 400, although I'll leave it to others in this group to provide a more experience-informed comparison.

Also, with regard to online resources, be aware that there's a load of good info to be found in the archives of rec.radio.shortwave. Searching these archives with the right keywords can yield answers to many many questions and provide opinions on a lot of different products.

HEY !!

You quit puttin down my friend cuhulin@webtv.net in here!

He's got the most brilliant one-liners since Arthur Godfrey
and he's desperatly needed in this NG.

Much better reading that the usual bullshi+ from the usual gang of idiot
rejects from the old 14.313 that RH exiled to here..... PFHBBLLTTTTT!!!!!!

>www.pbase.com/kilen

Douglas...do you use the KA1102 radio indoors and if so...what
exactly do you use for an antenna?

Is there a website I can reference to show use of that Radio Shack SW
antenna kit to the maximum? I mean I am less than an amateur and do
not have a clue how to use that material...the bare wire... the
insulated wire..etc etc The instruction sheet is incomplete for me.

PS I am in an RV and REALLY move around a lot. Based on what I read
here...my RV aluminum joists probably means an interior antenna is
just plain out of the question..and I better learn what to do with
this SW antenna kit...and consider too..some type of roof antenna that
maybe I can plug into the portable radio.

Or...back at home base I have a double loop aluminum tube FM antenna
(Radio Shack..it folds)) I could take with me and hoist up tree
branches and run coax from it.

But how do I get any thing to plug into that mini plug...mini plug
antenna female in the KA1102? I mean.. how do you adapt bare wire to
the mini plug? Coax to the mini plug? (I stripped a little rubber
from the tip of the aux antenna wire that came with the KA1102 and ran
a jumper (alligator clips) from it to 25 feet of copper (uh-oh... I
lie...being an amateur.. I have 25 feet of copper...in kinda an
L..and then I have the last 50 feet wadded in a loop...duct taped to a
galvanized light pole). I mean..the instruction sheet for the SW kit
sucks...but then I don't follow directions well anyway.

I see no way to attach a "ground wire" to the KA 1102. I see no
explanation of exactly how you do the 33feet of copper for 20 meter
SW stations. I mean ...can you do 40 feet of copper with two 3.5ft
loops in each end that go around big trees ..then there is 33 feet of

straight wire? Six inches at each end wrapped around the enclosed standoffs..leaving 32 feet of straight copper? I have some kinks in the copper...do I need to throw it away and start over? I don't get it. Must I cut the 75 ft of copper in the kit... or can I wad the excess at one end..or evenly in both ends...not at all? , cut it? ! Do you connect 50 feet of insulated wire into the middle of the 33feet of copper ? Give me a break...what's the program?

Can you just use alligator clip to the whip? and be better off??

Any help would be greatly appreciated. .. I literally do not have a clue.

3133. Inverted L Receive Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-12-20 15:51:45 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <NoadnXlAa94RtTXeRVn-pg@comcast.com>
Source record: 55042

Hello:

First, thanks everyone for answering my previous posts on antennas, and providing all those great links. Have been reading on, but it certainly is a confusing subject, at least to me, with apparently lots of contradictory opinions.

So again, thanks very much for help; really appreciate it.

Have finally convinced the wife to go along with an outside antenna as everyone has been suggesting to me, rather than living with the wire strung around the 4 corners of my attic which I now have. Took some doing.

Do listening only, most anywhere from 30 on down to 0.5 MHz.

Have pretty much decided on purchasing the PAR EF-SWL (45 feet overall L, end fed), and

configuring it close to the house as an Inverted L.

a. Is there an "optimum" ratio between the lengths of the horiz and vert. legs ?

What does it depend on ?

b. I saw some radiation plots for the antenna, and although I don't understand these plots fully, they don't seem to be perfectly omni. When I string it up, I might as well try to optimize it for my preferred listening directions.

Would this be perpendicular to the horizontal axis (e.g., if I want E-W optimized, should the horiz wire be strung N-S, or,... ?

Or, it is so close to omni, that it really doesn't matter ? Would the answer be (very) freq. dependent ?

c. Think there would be any meaningful losses is I run the vertical length fastened to the house ?

d. I guess that "the higher, the better" applies here also. True ?

If so, any problem with end of the vertical also being raised from close to ground level as a result of trying to bring everything up ?

Thanks,

Bob

.....
.....
THINK OUTSIDE THE POLYTETRAHEDRON: read cuhulin. Cuhulin is the
Marshall McLuhan of rec. radio. You never know what idea he is going to
spin off. All you cookie-cutter mass-mind types can just ignore him but
I suspect he has many readers. I am constantly amazed at the number of
world-wide readers of rec.radio who rarely post. Maybe they are trying
to figure out cuhulin. I notice that occasionally he drops his Beverley
Hillbillies routine and lets out some pretty good stuff that is out of
character. Maybe he is just yanking your chains. Further analysis
welcomed.

Whtta ya nuts or somethin
This is a free unmoderated NG
I would much rather read Cuhulin's posts than the constant political rants
and repeats of the news I get off of CNN, etc
His one-liners rival Charlie Weaver's Mount Idy letters
Example of Charlie Weaver humor

Peter Marshall: Which of your five senses tends to diminish as you get
older?

Charley Weaver: My sense of decency.

Bravo Cuhulin

It's a great device and I'm happy to own one ; but you can do better
receptionwise with a couple DA100E active whips combined in an ANC-4
(total new, about $600) ; or substitute a Wellbrook ALA1530 for one of the
whips and you can co-locate the whip and the loop, still combining them
in the ANC-4. The British pound though makes that more expensive today.

Just in case somebody is pining for great MW reception and cursing the luck
that you can't get the Kiwa MW loop any longer.

Separate the whips by 125' or so.

The ANC-4 lets you steer the pair of antennas from one endfire to the other,
with a null that starts in a closed V at endfire (= in the plane of the loop,
in the case of the loop+whip ; and = the line of the whips, in the case of
two whips) to an opened-V line at broadside, to a closed-V line at the other
endfire.

The phase alone would do it except you have to keep rebalancing the gain
at each angle, so it's really a two dimensional adjustment to null something ;
just as, with the Kiwa loop, you have to adjust azimuth and elevation both.

Excellent observation from an astue gentleman !

If youself and Cuhulin will perchance be at Dayton 2006
please allow me to purchase both of you gentlemen a
drink. Not just a beer, a mixed drink from the menu.

I'm not a cheap ass like most of the hams at Dayton.

3151. FS: HEATHKITS, ELDICO's, SWAN 600 Twins, S-40 rcvr>ALL PICK-UP ONLY

Hi All;
As you all know, i've been think about moving so I need to sell my collection, much is gone but am finding still more:-)
1)-3 Heathkit SB-401 transmitters, none tested, one min. does have the crystals so it can be used by itself,
Heathkit SB-104 w/Matching supply.
Heathkit SB-102 xcvr w/HP-23B supply, not sure about cable.
All above is untested but needs clean-up.
Price is $650.

2)- I have 2 Eldico 100F transmitters & 2-Eldico 1000F amps for $1,000, all untested, one amp needs a meter, I think the 100F xmtrs might be prototypes from Eldico, but not sure.

3)-Swan Twins 600R with all options & 600T xmtr, & Swan matching spkr/patch. I have 2 original boxes, The rcvr works great, never tested rest, Look better than EXC. $650 all!

4)-Hallicrafters S-40 receiver $50

Many parts & tubes for homebrewers, like sockets, roller inductors, Coupla HB Amps, no supplies,
Coupla Roller inductor tuners, (Old HP(?) test gear, freee).
Please, only if you can pick-up on Long Island, NY!
Regards;
Rich WA2RQY

Save yourself a lot of research and headaches. Order one off of Amazon with free shipping for $129. The best radio in that price rang plus the only one in that price range with a sync detector.

The Sony ICF-SW7600G (http://www.dxing.com/rx/icfsw760.htm) is indeed a fine compact portable shortwave radio. Sony stopped producing this model in 2001 (I believe) when it was replaced by the ICF-SW7600GR. The '7600GR is essentially the same radio as the '7600G feature-wise and performance-wise, with the exception of two points: The '7600GR has a variable attenuator and has 100 or 102 memories (as compared to the 12 on the '7600G).

I've read these posts about the great deal that Amazon has on the '7600GR, but looking on their website, I didn't find the free shipping deal. While I found the listing for the '7600GR, I don't see that it's available from Amazon directly (although it seems some Amazon marketplace merchants have new and used units available):

http://www.amazon.com/gp/product/B00006IS4X/qid=1135106962/sr=8-1/ref=pd_bbs_1/104-3796743-1869565?n=507846&s=pc&v=glance

http://www.amazon.com/exec/obidos/tg/stores/offering/list/-/B00006IS4X/all/qid=1135106962/sr=8-1/ref=pd_bbs_1a/104-3796743-1869565?s=pc

One merchant, Capital Electronics, does have the product available for $128, but free shipping isn't indicated. Also, the merchant's ratings are so spectacular. Still, if you're looking to save a some dough and don't mind taking a chance...

One note on buying electronics through Amazon: Often electronic goods sold on Amazon.com are through J&R Music World, and quite often the shipping charge is a bit higher when ordering a product from J&R through Amazon than if you were to order from J&R directly. Just something to keep in mind, although J&R isn't offering the '7600GR through Amazon.

J&R lists the ICF-SW7600GR for $149.99 with free shipping:

http://www.jr.com/JRProductPage.process?Product=1627439

...although a note on that page reads as follows:

To purchase this product, please visit our Retail Stores (click here for hours and directions). You may also call our Toll Free Number (800-806-1115) to speak to one of our knowledgeable sales associates for up-to-the-minute pricing, information and availability. This item is not available through our website at this time.

The 7600Gr is the latest version...

Might I also suggest the Sony AN-LP1 Loop Antenna about $90
http://www.universal-radio.com/catalog/sw_ant/3676.html

or if you're on a budget a DEGEN DE31 Loop Antenna about $30
http://cgi.ebay.com/Degen-DE31-Active-Shortwave-loop-antenna-New-in-Box_W0QQitemZ5843877794QQcategoryZ15051QQssPageNameZWDVWQQrdZ1QQcmdZViewItem

A review comparing these two antennas:
http://www.radiointel.com/review-degende31.htm

If you're really on a budget, Some random wire and a plug from radio shack...less than $10.

The Amazon deal I told you about is a fantastic deal! $129 and free shipping!

They had free shipping the other day but I did not see it when I looked just now. I did see the radio listed for $128 though. They offer free shipping quite often so look closely for it or wait until they offer it again. Shipping shouldn't be much though if you have to pay for it.

Just a guess, but is the bandwidth big enough with the Kiwa? I'm
guessing you need 40Khz BW.

IBOC should work with a wellbrook, since they are untuned.

Byung Myung Sying wrote:

Source record: 55237

Well, I think you'll be quite pleased with the 'SW7600G. It's a very nice set, and I've had some great times with it when traveling about. As GYT had mentioned, the Sony AN-LP1 antenna is a nice match for the 'SW7600G. Sony provided a wind-up passive wire antenna with the 'SW7600G. If that wasn't included when you bought, Sangean makes a similar product. A simple wind-up passive antenna of this kind can yield some pleasing results, if you're not ready to plunge for a pricier antenna at the moment:

A General Electric Super Radio is a cheap start. There are always better radios and they are limited only to how much cash you are willing to sacrifice.

I'll let someone else chime in about the antennas you asked about.

3183. New Old Stock from Universal Radio?

Newsgroup: rec.radio.shortwave
Date: 2005-12-20 22:21:09 UTC
From: "greg@littlebear.com" <greg@littlebear.com>
Message-ID: <1135117269.251520.272420@f14g2000cwb.googlegroups.com>
Source record: 55243

I recently purchased a new Yaesu VX-7R handheld from Universal. The experience wasn't exactly pleasant, I placed my order (online) on a Tuesday, hadn't gotten any response by Thursday, called to confirm order, yes they said they had it but it hadn't shipped. I asked if the units were in stock, they said they had plenty. Long story short, didn't ship for another 7 days and when it did got no notification of shipment.

But the real issue is that I just checked the serial # on the unit I got and it appears to have been manufactured in January OF 2003. In other words, next month it will be three years old -- and this was supposed to be a new unit.

It was in all the original packaging, etc. But is it really possible that Universal's turnover is so bad that they have three year old product sitting on their shelves? Does anyone know of any significant revisions to the VX-7R over the last three years that would render my unit suboptimal?

Thanks,

greg

3184. 2006 SWL Festival in Kulpsville, PA / March 3-4, 2006

David,

The Par Electronics End-Fed Shortwave Listener's EF-SWL Antenna
uses 45 Feet of # 14 AWG Polyethylene Black Jacketed Flex-Weave
Antenna Wire with 168 Copper Strands as it's Wire Antenna Element.
FLEX-WEAVE => http://www.davisrf.com/ham1/flexweve.htm

That was the basis of the above # 14 AWG comparison ~ RHF

The cheap SelectaTenna is the best oneIMNHO. The Super Radio is
analog. If I wanted to ,ess with cheap analogs I'd get an old 5 tube
superhet plastic radio.

I'm currently AM DXing with my ICOM R75 and an MFJ-1024 external
wideband active antenna on a 20' pole in my back yard. It's like
sitting in the front seat of my '56 Cadillac (without the vibrator
hum).

I was browsing the Amazon site the other day and noticed a recent buyer comment on the Sangean 909. There was a link to a web site where this person did a mini-review and mentioned something about a newer version which has a blue Sangean badge in the upper left corner of the radio. He mentions an upgraded speaker, but not much else. Does anyone in the group have any info on this and if there are any other known upgrades or fixes to the recent 909's?

Moving the passband does not work as well as the side band selectable
sync.

To get away from interference the first step is moving the passband
control. If that is not enough I re-center the passband control and then
select the side band away from the interference.

I usually move the passband control for a higher tonal range on the
non-interfered with sideband.

Like I said, it's very nice. Probably overkill. I have a piece of
Teflon insulated, tinned 22g strateched 125' across my backyard that's
working just fine. Seems a thick wire like the 14g would require a
heavier-duty suppourt arrangement. I just use nails and TyRaps.

Not really.

> What does it depend on ?

The idea is to be sensitive to vertical and horizontal voltage polarized
waves so something around 50%.

> b. I saw some radiation plots for the antenna, and although I don't
> understand these plots fully, they don't seem to be perfectly omni. When I
> string it up, I might as well try to optimize it for my preferred listening

This is not important as you are not going to get the antenna high
enough off the ground to worry about it.

> Would this be perpendicular to the horizontal axis (e.g., if I want E-W
> optimized, should the horiz wire be strung N-S, or,... ?

Generally you want to run the horizontal part north - south for
reception east - west. The horizontal part of the antenna will still
receive north and south just not as well.

> Or, it is so close to omni, that it really doesn't matter ? Would the
> answer be (very) freq. dependent ?

You would have to invest in expensive towers to get the antenna high
enough for the patterns to matter.

> c. Think there would be any meaningful losses is I run the vertical length
> fastened to the house ?

Yes keep it away from the house. The house is a source of noise in
addition to weakening the signals the vertical part can receive.

> d. I guess that "the higher, the better" applies here also. True ?

Higher is better.

> If so, any problem with end of the vertical also being raised from
> close to ground level as a result of trying to bring everything up ?

Yes. For a single wire antenna the other half of the antenna needs a
good RF ground, which means you don't want the coax and radio connection
to the mains ground to be the return. You want to use a UNUN from coax
to to wire near the ground level and run the vertical part of the
antenna from that point. You should have a ground rod at that same point
for the antenna/UNUN RF return.

> The worldwide market for shortwave radios has all but collapsed.

Yo, ignorAnus, you don't know about a Communist Party sponsored trade show
in NY and your spouting ignorAnus economics.

> If it
> were otherwise then Sony. Panasonic, Sanyo, Kenwood, Yaesu, Icom, etc.,
> would still be in the market merrily selling shortwave radios.

Go back to Macro economics 001

> Fact is
> there is not enough demand to justify production of HF receivers.

That's interesting, Icom, Kenwood and Yausu make plenty.
Fortunately Communist Party factories havn't figured how to build them.

> The

> is chinese consumers will turn rapidly to domestic broadcast, Ipod,
> internet and satellite for radio transmissions. Just like the rest of
> the world.

My my, you spout some interesting expurtese.
The Chinese Communist Party has the largest shortwave network in the world.

Most of it is used for domestic broadcasting - d'oh!

> > > If a chinese SWLer wanted an Eton product they would just have to buy
a

Nothing makes sense to you when you havn't the basic knowledge to even
begin.

SSB radios are illegal in China and individuals cannot import them without
loads of Communist Party Red tape.
They are illegal to operate unless you are a licensed Communist Party ham or
a guest of a Communist Party Ham radio club. Understand Bozo?

Is it any wonder to you why accessing SSB on Degen radios are obfuscated?

> > > Not many Sony shortwave radios to be found in chine bcause they are

> demand for the product.

It is precisely why you should buy a Sony product other than the fact Sony
SW receivers are superior.

The lack of demand is componded by the barrier to entry in the Communist
China mainland.
Have you figured out the score yet birdbrain?

> > > And because China hasn't opened it's market to outside

Numerous? You just said SWL is dead. You make absolutely no sense and
your knowledge about SW radio in China is practically nil.

> I have been to China, but not
> to buy shortwave radios.

Tourist? LOL

> Someone making $400.00 per month in China
> would be reasonably well off actually.

Reasonably? Sure, if living in a company provided two room apartment, free
water & heat, along with the rest of your family.
No need for health insurance as you are given the "great care" from
Communistm Party hospitals. "Great dental" too if you have any teeth to
worry about. Sounds reasonable to me - LOL!

> But still they probably would
> not be interested in spending food money of frippery like shortwave

Let me see, the economy is the fastest growing in the world, it is arguably
the 4th, 5th, 6th largest economy in the world if you beleive Communist
Party statistics - LOL! Yeah, the poverty level population of Appalachia is

as large as Chinese pheasants - LOL! Your logic is amusing.

On ignorAnus ideology.

3204. Communist Chinese sell organs from executed prisoners to British

Newsgroup: rec.radio.shortwave

Operations were to be carried out at Guangzhou Air Force Military Hospital

"There are spies," Dr Na said. "We have to be very careful."

Military hospitals are independent of the health ministry, but as Dr Na euphemistically said, they also have better access to the Public Security Bureau - the police. This means transplants that are a good "fit" are more readily available from the execution grounds.

Foreigners, after their initial check-up, are guaranteed their organ will arrive within two weeks. Some human rights campaigners have claimed the use of transplanted organs encourages the authorities to arrange executions to suit the doctors' schedules.

Asians pay half the western price...

Wal-Mart operates over 1,000 "secret" factories in China. One of these, a factory in Lungcheong, requires its workers to work 13 hour days, six to seven days a week, for as little as 18-33 cents an hour well below the already abysmal Chinese minimum wage.
...
the Communist Chinese government is complicit in the human rights violations that occur on a regular basis at these factories, as they allow Wal-Mart to circumvent Chinese law.

http://english.epochtimes.com/news/5-12-19/35912.html

Wal-Mart s ties with Communist China

the Communist Chinese government helps to keep these factories from the public eyes, and away from proper scrutiny.

Hello junius,

I have attended 5 of the past 6 years.

I always have a good time. There are many seminars that are presented over the two days that the fest runs (plus Thursday nights, or so I hear). Last year Bob Zanotti (Swiss Radio International co-host of the two Bobs program - now discontinued) and Ian McFarland od Radio Canada International (now retired) put on a great presentation emulating an actual type broadcast. You could close your eyes and imagine listening to either on shortwave!

There are also presentations on scanners, DRM reception demonstrations, Satellite TC (free to air, not Direct TV or such), Pirate radio, ham radio and many, many more topics.

They also have a great Banquet on Saturday night and have many great prizes in a drawing held at the banquet. A drawing ticket is included with the registration packet (for full registration) and you can buy more to increase your chances. They are $1.00 each and in the past they had 6 for $5 and 13 for $10. The grand prize (in the past) have been Drake R8B, Grundig Satellite, Lowe HF-150, Ten-Tec DSP (The $1,200 one) and the computer controlled Ten-Tec. They also had an Icon R-75. Many portables of lesser value plus many other radio items including SalectAtenna and wire antennas. Also many books on shortwave and other radio items.

There were just too many items to mention - you must get there if you can - you will not be disappointed.

Warren

PS: I will be there if at all possible - had a GREAT time in the past.

> Eton radios are nothing more than rebadged Degen and Tecsun receivers.
> So if they wanted to eliminate any potential competition from Eton all
> they have to do is stop supplying them!

The Kaito-Degen radios seem to offer more bang for the buck than the Tecsun models being sold under the Eton name. I'm curious, which Degen radios are currently being sold under the Eton name?

I saw in PWBR that there's this DE1106 that Degen was going to produce but they "sold the '1106's rights to another firm" (Eton). That radio will be sold as the E5. I wonder if manufacture of this unit will be by Degen in Shenzhen? In any case, this E5 looks likely to be a better performer than the E10 or E100 (both of which seem somewhat mediocre in comparison with the price and performance offered by the Kaito-Degen models). Perhaps Eton bought the rights so that they could slap a $150-plus price on this radio w/out being undercut by China-based internet retailers (i.e. that eBay fellow in Guangzhou) selling a DE1106 at a fraction of the price.

I'm still unclear on the relationship between Degen and Tecsun. They seem to be internationally marketed through the same distribution point in Hong Kong. There was once some Leowood guy who posted in here, building up a lot of hype over some (presumably) forthcoming DE1108, and this guy gave out some line that Degen used to once be a Tecsun subsidiary but that it was now a separate and independent company. I don't know if he was full of it about that and about the 1108. He had claimed to be doing research on consumer preferences and that sorta thing. Anyone ever heard anything since about this '1108?

Junius

Yes, I do read this group from google, but will be changing that soon.
I'm more concerned with how the newcomer to shortwave radio will take
these riduclously off topic posts. Personally, some of his comments
are quite funny, and I understand those who defend him. But still,
there seems to be way to many posts from sincere newcomers (or sincere
oldtimers) to SW that have their topics cut off and hijacked by this
guy. That's what really bothers me.

Don't know about revisions to the VX-7R, but the Big Two usually
discussed here for purchases have not won any kudos from me.
Universal killed off a $4,000 purchase in 2003 by blowing me off when
I talked to them about purchasing a TT RX-340. Even the poor lady who
passed me the response from the "sales" person was taken aback at it.

I bought from Ten Tec instead.

If I can, I do as much purchasing from Ham Radio Outlet, but it helps
if you know someone. The local (Denver) store has a real jerk there
(who's always available to talk to you since all the experienced
buyers avoid him) and some good people.

As for the Yaesu... call Vertex-Standard (Yaesu) and ask -- you'll
probably get decent help from them about any changes.

That's what earns 'em the big <PLONK> in my newsreader. I enjoy off topic funnies as much as the next guy but strings of 3-5 consecutive posts containing random streams of consciousness get tiring to trudge through after a while.

Eric,

Yes I had a similar experience a few months ago with them. It was like I was interrupting them. Maybe they were feeding their cats. ;)

I gave them another chance and ordered a radio from them last week. That's how people usually treat their customers these days.

Belated congratulations on the Ten Tec.

Maybe, I'll forward this thread to them.

Do you mind?

Source record: 55341

Hello.

I owned (and still own) two Sony ICF-SW7600G models (purchased in 1998 and 2000) but when the ICF-SW7600GR was announced in 2001 I decided to buy one. This new model offered more and better features than the G model: a variable attenuator, two clocks (and it's much easier to adjust local time to DST), and more memories - AND those memories are non-volatile. While performance is identical to the G model, the features are better in every way.

My first '7600GR was purchased in 2001 and has serial number 10864.

My second and third were purchased in 2002 - serial numbers 48734 and 48735.

When I saw that Amazon was offering them for $129.15 INCLUDING shipping, I didn't wait - I bought two more; they arrived on December 16 and carry serial numbers 158702 and 158704.

All were perfect out of the box; I have never had any problem whatsoever with any of them (G or GR models - I also own two ICF-SW35 portables which I keep in the glove compartment of my cars; they have always operated flawlessly also).

The vinyl carrying case of the two newer samples are made of a different material than the cases of my older ones but otherwise there is no difference at all.

The serial numbers are interesting. This is a rather expensive and esoteric radio that has received absolutely NO promotion of any sort and cannot even be purchased in any "mainstream" electronics store of which I'm familiar (certainly not in my area - Southern New Jersey/Pennsylvania/Delaware) and yet you can see just how many they've sold.

I hope Sony keeps producing these radios for a long time (though I'm certain they - in their abject stupidity demonstrated of late - will discontinue ALL their shortwave radios soon); their development costs for the '7600GR have long since been written off and this radio is STILL head-and-shoulders above ANY other small portable shortwave receiver available and I don't see any other manufacturer offering (or planning to offer) any comparable (in design, features, and construction-quality) shortwave receiver.

The ICF-SW7600GR is still the best and far-and-away the best VALUE, in my opinion.

I hope the above was of some interest.

Joe

Hello Lenny.

You can check all the reviews mentioned in the posts above but keep one thing in mind: your Yachtboy 400 is a DUAL-conversion radio; the E-100 is SINGLE-conversion.

That alone should answer your question about performance comparison.

Best,

Joe

3234. INFO ? Sony ICF-7600GR 'portable' AM/FM Shortwave Radio

That was my review and website. It isn't the radio labs. It is the
plain 909. I was told by some other people around the web (on the
Yahoo Group I think) that if it has a blue badge on it then that
symbolizes that it is the newest model and has an upgraded speaker from
those with the red badges. They said this was the only known upgrade.

I believe the Yahoo Group for the Sangean 909 is actually named for the
Radio Shack version.

I used to think Alex Jones was completely nuts, and to a degree, I was right. All that crap he said Clinton was going to do turned out to be false. However, Bush must have listened to Jones. Now we have the Viper Squad (trains), feds taking guns (New Orleans), jump squads (rendition), and snooping without a warrant. I'm still not convinced Bush will step down in 2008, or when he is impeached.

BT,

THREE AM/MW RADIOS TO CONSIDER :

GE Superadio III {Analog Only}
- - - and older GE Superadio II would be better.
http://www.universal-radio.com/catalog/spcialty/0547.html
http://www.ccrane.com/radios/am-fm-radios/ge-superadio-iii.aspx

Grundig S350 / Tecsun BCL-2000 {Analog Tuner with Digital Read-Out}
- - - or the newer Eton S350DL / Tecsun BCL-3000
http://www.universal-radio.com/catalog/portable/3500.html
http://www.universal-radio.com/catalog/portable/0036.html

CC Radio Plus {PPL Tuner and Digital Read-Out}
http://www.universal-radio.com/catalog/spcialty/4403.html
http://www.ccrane.com/radios/am-fm-radios/ccradio-plus/index.aspx

THREE AM/MW ANTENNAS TO CONSIDER :

Select-A-Tenna Model 541-M
http://www.universal-radio.com/catalog/mwant/4316.html
http://www.ccrane.com/antennas/am-antennas/select-a-tenna-hardwire-model.aspx
http://www.ccrane.com/antennas/am-antennas/select-a-tenna-model-m.aspx

Crane Twin Coil AM/MW Ferrite Rod Antenna
http://www.universal-radio.com/catalog/mwant/3675.html
http://www.ccrane.com/antennas/am-antennas/twin-coil-ferrite-am-antenna.aspx

Quantum QX Ferrite Rod AM/MW Antenna
http://dxtools.com/QX.htm
http://dxtools.com/PRODUCTS.htm

F Y I - THAT LITTLE SOMETHING EXTRA :

Best "Desk Top" Receivers for AM/MW/BCB DXing
http://dxtools.com/BestDXrx.htm

Best 'portable' Radios for AM/MW/BCB DXing
http://dxtools.com/BestDXrx.htm

THREE MESSAGES TO READ ABOUT AM/MW DXING :

AM/MW DXing with the GE Superadio III
or the Grundig S350 / Tecsun BCL-2000 Radios
http://groups.google.com/group/rec.radio.shortwave/msg/7d9d216f62a0a6dd

Casual AM/MW DXing ? Grundig S350 -=V=- Sony ICF-SW7600GR
Plus the Select-A-Tenna

What is the best types of antenna to optomize AM reception?

Beverages, flags, loops, etc...

Also what
are some of the better AM recievers on the market?

There are half a zillion models that will do the job.
I prefer digital readout, and decent selectivity, but
not so tight as to pinch up the audio.

What about the
antennas that are just set next to an AM radio without any actual
connection. I believe CC Crane sells 2 models. Thanks

You can build one that will work about as well as anything else
for peanuts... I have one design I've been using that uses a very
simple and cheap PVC frame.
http://web.wt.net/~nm5k/loop5.jpg
Those can be placed next to a radio to couple, or you can add
a coupling loop, if you want to feed it with coax.
I have one in this room that I use with my IC-706mk2g.
It's a diamond , and each wire side is appx 48 inches. It
sits in a rotating stand, and is nearly as tall as the ceiling
when in the mount. It's even simplier than those plans, as
that one uses a single fat support PVC mast, and crossarms
like the plans, with the "T's" on the ends to run the wire through.
I use a multigang capacitor, that is switchable as far as the
number of gangs, or which particular one I want to use.
The way mine is set up, it's a "two range" loop , if you switch
cap settings. It tunes from below the MW-BC band up to above
the 160m ham band. Except for my lack of regeneration, it's
as good as anything you would buy. I could always add a
regen circuit to increase the Q, but have never felt the need.
That design is set for 7 turns on a 35 inch per side frame.
My 48 inch per side loop uses only 5 turns. I use a single
coupling loop that is appx 6-8 inches inside the main loop
wires. I feed mine with coax.
But I made one for one guy that used to hang out on this
group, and he directly coupled his while sitting on a lazy
susan. He said it worked fine. His was exactly like the one
in that plan on my page. I dunno if he has been around here
lately or not...Haven't seen him in a while. He used the
name "bearcats" or sumtin like that...As in sports fan...
One of those loops, just passively coupled, can turn even
a semi dead cheap radio into a pretty good performer. Loops

are great for daytime regional listening. Those signals
are mostly ground wave, and you can really see the nulls
you can get from the loops. A decent loop will make a
daytime groundwave station disappear if you turn the null
to it.. IE: broadside to the loop.
MK

From: Lenny <freilich@comcast.net>
Message-ID: <SrudnTDRZvX91DTeRVn-iQ@comcast.com>
Source record: 55261

OK, as I've posted previously, I'm getting back into SW after a year off. Prior to that, I'd only been listening for about 6 months, so I'm far from an expert.
I have an Icom R75 with all the Kiwa mods.
Also, using an Antenna Supermarket Eavesdropper.
I'm pulling in most of the stronger world radio stations, but kinda feel that I should be pulling in more of
the weaker ones also. Plus, many of the stations I receive have tons of noise,static, and fading on them. Now, I know that some of this is to be expected when listening to SW, but I don't know how much of it is considered normal. Maybe I'm expecting too much from the radio and antenna but don't know as I've only been active in the hobby for a short time. Or, maybe I'm not totally proficient in using the radio and don't know all the tips of the trade.
So, I was wondering if someone who lives in my neck of the woods would like to visit some evening to check out my setup and give me some pointers.
My offer is beer, coffee, or soda and lots of annoying questions.
I'm in Belvidere, NJ, right on the Delaware River.
Email me if you're interested in my offer or if you just have any tips for me.
Thanks,
Lenny

3252. Re: Sony icf sw7600g

Joe,
I have been eyeing the SW07 to augment my 7600GR. What I haven't seen is a comparison of the 7600GR + ANLP1 against the SW07 + ANLP2. From what I have read the SW07 Sync Detector is the same as that in the SW77 and performs better than the 7600GR Sync Detector.

Would enjoy reading your opinion.

> comparison with the price and performance offered by the Kaito-Degen
> models).

The E5 is Dual-Coversion (better) while the E10 & E100 are
single-conversion.
Considering price the Sony 7600GR with its reknown Sync-Detector is
superior.

> Perhaps Eton bought the rights so that they could slap a

Any mainland Chinese that is capable of posting to any international
newsgroup has "special" internet privileges bestowed by the Chinese
Communist Party. The internet in China is really a Peaple's Liberation Army
(PLA) INTRAnet with only two gateway routers to the outside world. These
two gateways have special Cisco software called something like Golden Wall
which actually opens your internet packets to see what is inside to filter,
censor and block potentially "sensitive" information coming in or going out
of the mainland.

Kaito (Degen) is a subsidiary of China National Electronics Import & Export Shenzhen Company (CEIEC ShenZhen) http://www.ceiecsz.com.cn/

The CEIEC company is a conglomerate who manufactures hundreds of electronic products with brand names such as Mastech, Sinometer, Unistar, Kaiwa, Epsic, Hisonic. The company is distributed in more than ten enterprises in the fields of international trade, real estate, financial securities and high & new tech industries.

ANY Chinese company in China as large and broad as CEIEC inevitably is intimately associated with the PLA and the Chinese Communist Party. http://www.ceiecsz.com.cn/en/about.company.htm

Hello SeeingEyeDog,

I've got an 'SW07, and I find it to be quite a decent little radio; I like the more compact size, since I do a bit of traveling. I've also got a 'SW7600G. More often than not, there's not any real discernable reception difference between the 'SW07 and the 'SW7600G. I have to admit, I've not done a side-by-side comparison of the two. The sync detector on the 'SW07 probably does work a little more smoothly and with a little less proneness to disruption during some of the deeper fades (and less howling in engaging and re-engaging a signal in sync mode). In my opinion, though, the 'SW07 is rather steeply priced. Unless you're just really taken with the size and design, I don't see any real reason to go for the 'SW07, if you've already got a 'SW7600GR. I've also found that my 'SW7600G is bit more sensitive off the whip than the 'SW07; the 'SW07 is a bit more dependent on the ANLP2 for sensitivity.
In my opinion, if you're wanting a portable that's gonna offer you a performance edge over the 'SW7600GR, then you might be advised to look toward a used '2010 or 'SW77 (if you're wanting to go with a Sony) or Eton's new E1. While the E1 is priced $100 higher than the 'SW07, it offers a number of advantages; to name a few: three bandwidths, as opposed to one on the 'SW07; passband tuning; 10 Hz tuning increments, facilitating more precise SSB tuning (drawback noted below); greater resistance to overload w/external antennae; and the most effective sync detector I've come across on any portable (and it does DSB sync mode, as well as selectable sideband sync). There are some quirks to the E1, however: as some have noted here, some samples of the E1 occasionally tune some 50 or so Hz off from a signal's actual frequency. This is something to consider if you're considering the E1 for use with SSB reception, although it's nothing you'd notice in AM mode. So, simply put, while the E1 offers premium performance as a portable shortwave receiver, it is not gonna offer you the performance of a serious tabletop receiver (which I'm sure you wouldn't be expecting, but it's good to state nonetheless). At any rate, the E1 is something you might consider, if you're looking to acquire a portable with more capabilities/features.

Yeah, there's nothing like a well-stocked killfile to brighten up a day.

> I'm more concerned with how the newcomer to shortwave radio will take
> these riduclously off topic posts.

Both SWLs and usenetters have to deal with all sorts of unwanted noise. In each case, better filters help.

> Personally, some of his comments
> are quite funny, and I understand those who defend him. But still,

Yea...I've stopped even checking with Universal when I buy anything. The last few times I phoned the salesman acted like it was a BFD to check his stock. Then they really stuck it to me on shipping/handling. My wife tried to order a gift for me a couple times and she was treated like crap. If they don't care, I don't care and the only way to handle these kinds of places is to vote with your feet (go elsewhere).

Well, Hallicrafters is kinda still around. Professional Electronics claims the name and says they are the "MANUFACTURE OF 'HALLICRAFTERS' • PRODUCT LINE". And, to enhance their credibility they have the:

```
HALLICRAFTERS TELEPHONE : 205-664-1937

This all comes from Professional Electronic's "NEW PLANNED WEB SITE" which
was last updated on 06/06/98.

I'm guessing your tube supply remains safe.

As usual the facts are against the Bush regime. If it weren't for their incredibly powerful spin machine, they would be locked up - and the whole world would be much better off.

Bush's Snoopgate
The president was so desperate to kill The New York Times' eavesdropping story, he summoned the paper's editor and publisher to the Oval Office. But it wasn't just out of concern about national security.

By Jonathan Alter
Newsweek

Dec. 19, 2005 - Finally we have a Washington scandal that goes beyond sex, corruption and political intrigue to big issues like security versus liberty and the reasonable bounds of presidential power. President Bush came out swinging on Snoopgate-he made it seem as if those who didn't agree with him wanted to leave us vulnerable to Al Qaeda-but it will not work. We're seeing clearly now that Bush thought 9/11 gave him license to act like a dictator...

No wonder Bush was so desperate that The New York Times not publish its story on the National Security Agency eavesdropping on American citizens without a warrant, in what lawyers outside the administration say is a clear violation of the 1978 Foreign Intelligence Surveillance Act. I learned this week that on December 6, Bush summoned Times publisher Arthur Sulzberger and executive editor Bill Keller to the Oval Office in a futile attempt to talk them out of running the story. The Times will not comment on the meeting,
but one can only imagine the president's desperation.

The problem was not that the disclosures would compromise national security, as Bush claimed at his press conference. His comparison to the damaging pre-9/11 revelation of Osama bin Laden's use of a satellite phone, which caused bin Laden to change tactics, is fallacious; any Americans with ties to Muslim extremists-in fact, all American Muslims, period-have long since suspected that the U.S. government might be listening in to their conversations [same is true for peace activists]. Bush claimed that "the fact that we are discussing this program is helping the enemy." But there is simply no evidence, or even reasonable presumption, that this is so. And rather than the leaking being a "shameful act," it was the work of a patriot inside the government who was trying to stop a presidential

power grab.

No, Bush was desperate to keep the Times from running this important story-which the paper had already inexplicably held for a year-because he knew that it would reveal him as a law-breaker. He insists he had "legal authority derived from the Constitution and congressional resolution authorizing force." But the Constitution explicitly requires the president to obey the law. And the post 9/11 congressional resolution authorizing "all necessary force" in fighting terrorism was made in clear reference to military intervention. It did not scrap the Constitution and allow the president to do whatever he pleased... in the name of fighting terrorism.

What is especially perplexing about this story is that the 1978 law set up a special court to approve eavesdropping in hours, even minutes, if necessary. In fact, the law allows the government to eavesdrop on its own, then retroactively justify it to the court, essentially obtaining a warrant after the fact. Since 1979, the FISA court has approved tens of thousands of eavesdropping requests and rejected only four. There was no indication the existing system was slow-as the president seemed to claim in his press conference-or in any way required extra-constitutional action.

This will all play out... there may... be articles of impeachment introduced. Similar abuse of power was part of the impeachment charge brought against Richard Nixon in 1974....

Above is an excerpt --- see the whole article here:

http://tinyurl.com/bmhya

http://www.msnbc.msn.com/id/10536559/site/newsweek/

This snoopgate matter seems very petty, when you consider that the widespread deception of the Bush regime has caused tens of thousands of little children, women and other good people to be killed dead, and many more to be mercilessly crippled for life (more needless misery than any of us could begin to comprehend). All that so Bush's buddies in the halls of power can grab more money and power (control of the oil, military industrial complex pork, and draw huge sums from the interest on our balooning deficit).

It must be very nice for citizens of nations that haven't supported Bush's illegal and immoral invasion/occupation to know that their tax dollars are used to help people, instead of killing, crippling, torturing, unjustly imprisoning, and robbing them. The US warmongers, and Israel (the USA's poodle) are the top obstacles to world peace. The problem is more serious than most people know.

3271. Re: New Old Stock from Universal Radio?

Newsgroup: rec.radio.shortwave
Date: 2005-12-21 16:24:26 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1135182266.032228.166720@g44g2000cwa.googlegroups.com>
Source record: 55281

Right, well, on the whole, I've had pretty decent dealings with
Universal. Admittedly, I have had it happen before where one of the
salespersons at Universal seemed anxious to get off the phone (even if
there was a valid reason for this, a good salesperson can conduct a
call in such a way that the customer isn't aware of the fact). But
that wasn't any big deal and was, for me, the exception and not the
rule. Recently, I placed an order from Universal by phone and received
really excellent, helpful service from Scott.
I think a large part of this sort of thing is simply the individual
salespersons and personality types. One of my worst experiences of all
times was with this overbearing, self-important bloke at HRO Atlanta
when I was new to the SWL hobby in 1988. He was the kind of fellow to
whom, if you weren't completely versed in all of the technical jargon
and so forth, you were an idiot. After purchasing a receiver, he
started trying to get me interested in amateur radio. But I can't say
that I was particularly thrilled at that idea after dealing with this
fellow. After all, I thought, why would I want to spend all that money
on radio gear so that I could communicate with folks like that?
Admittedly, not all ham operators are like that. But it's that sort of
experience that can be completely off-putting, especially when you're
new to something. Anyway, my interest in those days, and still is,
SWBC listening and not amateur radio. So, it's not likely that I would
have gone the ham route, even if he had been a decent salesperson.
And I don't mean for this to be taken as a swipe against HRO. That guy
has long since left HRO Atlanta. And I've had great experiences with
the HRO in Northern Virginia.

Hi

Many SW receivers can be hooked up to a computer. You have to check on if
the model you want has computer control as one of the featuers.
Second you NEED computer software to control it.
That's very important. There are many software programs that control certain
receivers like RXplus. But the previous poster pointed out a a GREAT
receiver for what you want.

The Ten Tec 320D is made just for computer use. It can't be used on it's
own. You need a computer to use it but it's pretty cheap and works
fantastic. I own one myself. It comes with software too and there's lots of
FREE software for it too. Lots! But I use Noels "RXPlus" it's worth the
money.

It's all relative. A person that makes $150 a month can live better in China than a person in the U.S. making 10 to 15 times more money. Trust me when I tell you I have first hand experience on this issue. If you don't want to support the Chinese economy, don't ever by anything from them again... especially radios and hearts.

Lenny,

Very good Receiver and Shortwave Listener Antenna :
* Icom IC-R75 with Kiwa Mods
http://www.universal-radio.com/catalog/commrxvr/0175.html
* Kiwa Electronics - Icom IC-R75 Performance Upgrades
http://www.kiwa.com/R75.html
* Antenna Supermarket Eavesdropper SWL Sloper
http://www.universal-radio.com/catalog/sw_ant/0013.html
http://www.universal-radio.com/catalog/sw_ant/0013.jpg
http://www.antennasupermarket.com/products.html

First - Down-Load, Print and Read & Re-Read
" Phil's Icom IC-R75 Cookbook "
http://www.geocities.com/philsr75infocenter/PhilCook.pdf
This CookBook is a Crash Course in using the Icom IC-R75 Receiver.

Join the Icom IC-R75 Receiver Owner /Users Group on YAHOO !
ICOM IC-R75 => http://groups.yahoo.com/group/icomr75/

Question - What type - kind of Ground
do you have for the Receiver and Antenna ?

Tip - Try placing Two Snap-Together Ferrite Core 'on'
the Coax Cable from the Antenna to the Receiver :
RadioShack Catalog # 273-105
http://www.radioshack.com/product/index.jsp?productId=2103222&cp
* One about Three to Six Inches from the PL-259 Plug
going into the Radio.
* One about Three ot Six Inches from the PL-259 Plug
connecting to the Antenna.

hope this helps - iane ~ RHF

Spare a thought for us in the Southern Hemisphere.
Temps at my QTH will run 105F/43C and the tropical summer thunderstorms blot out any idea of decent DX until at least the equinox in March.
Imagine eating my Christmas turkey in that heat - only saving is the lovely local champagne at $3 a bottle that will be carefully chilled.

A VERY HAPPY CHRISTMAS TO ALL
AND A HEALTHY AND PROSPEROUS NEW YEAR

Hi, Bob,

Generally speaking "higher is better." But so is "not too close to the house. Keeping the antenna at least 15-20 feet from your dwelling will reduce the rfi your antenna will pick up.

All best,

tyer

SillySam,

The US Congress (not President George "W" Bush) should hold Hearings
on the NewsWeek "Outing" of this Sensetive and Classified National
Intelligence Information.

Congress should Subpoena the : Owners, Chairman, CEO, Editors, and
Reporters of NewsWeek to come before Congress to give Sworn Testimony
as to Who Leaked this Information that has now has put this Nation's
Security and the Lives of Americans at Risk.

It Is Time - For the US Congress to Stand-Up and be Counted.

so say i - my opinions stated as facts ~ RHF

It will take more then a few ferrite cores to block noise on the outer
shield on coax.
See:
<http://www3.telus.net/7dxr/ircatech/snake.pdf#search='bryant%20lead%20in%20antenna>

I was dismayed until I went to the (considerable) effort to "do the job
right". The
techniques shown by John Bryant have reduced my PC to antenna noise to
below detection, and knocked an offending close by MW outlet to a
barely detectable level.

"Below detection" means I can't even see it on a FFT display.

From: Oklahoma Joe <ok-no-spam@okie.net>
Message-ID: <43A9B558.E248AEC8@okie.net>
Source record: 55356

Congressman John Conyers

Today, I am releasing a staff report entitled, "The Constitution
in Crisis: The Downing Street Minutes and Deception,
Manipulation, Torture, Retribution and Coverups in the Iraq
War.

In sum, the report examines the Bush Administration?s actions
in taking us to war from A to Z. The report finds there is
substantial evidence the President, the Vice-President and other
high ranking members of the Bush Administration misled
Congress and the American people regarding the decision to go
to war in Iraq; misstated and manipulated intelligence
information regarding the justification for such war;
countenanced torture and cruel, inhuman and degrading
treatment in Iraq; and permitted inappropriate retaliation against
critics of their Administration.

The Report concludes that a number of these actions amount to
prima facie evidence (evidence sufficiently strong to presume
the allegations are true) that federal criminal laws have been
violated. Legal violations span from false statements to
Congress to whistleblower laws.

The Report also concludes that these charges clearly rise to the
level of impeachable conduct. However, because the
Administration has failed to respond to requests for information

about these charges, it is not yet possible to conclude that an impeachment inquiry or articles of impeachment are warranted.

In response to the Report, I have already taken a number of actions. First, I have introduced a resolution (H. Res. 635) creating a Select Committee with subpoena authority to investigate the misconduct of the Bush Administration with regard to the Iraq war and report on possible impeachable offenses. In Watergate, for example, the Congress did not begin matters as an impeachment inquiry, but investigated matters ? through the Ervin Committee ? and referred impeachable evidence to the Judiciary Committee.

Second, I have introduced Resolutions regarding both President Bush (H. Res. 636) and Vice-President Cheney (H. Res. 637) proposing that they be censured by Congress based on the uncontroverted evidence already on the record and their failure to respond to Congressional and public inquiries about these matters and have never accounted for their many specific misstatements in the run up to War.

As you know, taking these steps means that I am likely to be criticized by the political and media establishments in Washington and attacked by the right wing noise machine. There is a school of thought among Washington political consultants that criticizing the President about Iraq will make Democrats appear to be weak on national security. There is a media establishment that marginalizes politicians for espousing

beliefs held by the majority of Americans. The
right wing noise
machine in turn retaliates against the President's
critics.

Be that as it may, I just could not be silent any
longer. The title
of the report is exactly right: the Constitution is
in Crisis. There
are serious and well-substantiated allegations that
the Executive
Branch has usurped the sole power of the Congress
to declare
war by deceiving the Congress about the evidence
for war.
There are serious and well-substantiated
allegations that the
Executive Branch has deceived the American people
to
manufacture the people's consent for war.

If you agree with me, I am going to need your help
like never
before. Please go to my website,
www.johnconyers.com,
where you will find an action center, including a
copy of the
Report via Raw Story, and ways you can help. Also
visit
www.censurebush.org to join with other activists
who want to
move this issue forward.

End.

CHELSEA Timemaster Clock

The 6" Timemaster Quartz Radio Room Clock

by Chelsea (Model 40101)

A rare opportunity to own a Chelsea special, non-catalog Government/Commercial clock.

New, factory fresh in an unopened, factory sealed box.

The Chelsea Timemaster is the pinnacle of maritime timekeeping - and this model features a Radio Room dial. This clock has been used for many years by the United States Navy in the demanding shipboard environment - setting the standard long before satellites were used for navigation - and still in use today.

This Chelsea Timemaster has a silent, high precision quartz movement as specified by the U.S. Military. It meets standards for vibration, temperature and humidity extremes. The accuracy of this quartz movement is +/- 1 minute per year. The Chelsea Timemaster clocks have passed U. S. Navy tests for accuracy, shock, vibration, temperature and humidity extremes.

The sinking of the Titanic resulted in the Radio Act of 1912 that required 24-hour radio watches. The disaster also led to clocks in the newer radio rooms featuring three-minute periods marked in red. That three minutes provided a silent period when only emergency radio messages could be transmitted.

These clocks had an extra hour hand which was set on local time; the regular hands were set at Greenwich mean time (Zulu) since all incoming and outgoing messages were so marked. The red segments radiating out from the center post designated 3 minute periods at the quarter and three-quarter hours to observe radio silence to listen for emergency broadcasts on 500kcs. Later models featured additional green sectors at the top of each hour and 30 minutes past each hour for the monitoring of the 2182kcs. distress frequency. The red marks in the chapter ring designated 4 second intervals to time emergency autoalarm signals used to activate alarm bells on nearby ships and shore stations during the sending of an SOS.

The Timemaster is suitable for use on the enclosed bridge, wheelhouse, and ships radio room, on any Government, Commercial or Pleasure vessel or of course, in any home.

Timemaster is not included in the Chelsea catalog. Produced under various contracts which offer limited availability to the civilian market, and available only through authorized dealers by special order.

This clock is available for immediate shipment to the winner of this auction. It comes in its Factory-sealed (unopened) box.

Features:

6" diameter Radio Room dial
Accurate 12 hour quartz movement (+/- 1 min per year)
Second register
Hinged front bezel
Second hand
Black phenolic case

Terry R2000SW...

This is a very good Article to Read:
"Is Your Coaxial Lead-In Actually an Antenna ?"
- by John H. Bryant with Bill Bowers, February 2001
http://www3.telus.net/7dxr/ircatech/snake.pdf#search='bryant%20lead%20in%20antenna

However, the suggestion about "TRYING" the Snap-Together
Ferrite Core is a first step and a beginning in what may be a
long journey toward less noise and more signal.

Tip - Try placing Two Snap-Together Ferrite Core 'on'
the Coax Cable from the Antenna to the Receiver :
RadioShack Catalog # 273-105
http://www.radioshack.com/product/index.jsp?productId=2103222&cp
* One about Three to Six Inches from the PL-259 Plug
going into the Radio.
* One about Three ot Six Inches from the PL-259 Plug
connecting to the Antenna.

That is also why I asked this Question :
"Question - What type - kind of Ground
do you have for the Receiver and Antenna ?"

keeping it simple and practical 'kisap' - cause iane ~ RHF

I've discovered that the kiwa.com site seems to
not come up for me very much on the weekends
or late at night (EST). I've figured that it's either
my local DNS or downtime at their server's site.

Learn the story before you start flinging mud. The New York Times
broke the story. The Newsweek story is about Bush begging them not to
run it. If there was a national security issue, Bush could have
stopped them from running it in Federal Court, at least pending a
hearing.

DaviD,

Good Citizenship requires that every Citizen act in the "Interest" of
the Nation and not for their own selfish personal - business interests.

The New York Times and NewsWeek by their very Public Actions
have put the National Security at Risk and placed the Lives of
Every American Citizen in Harms Way.

These are Civil Acts - Not Good Reporting !

These are Criminal Acts - Not The News !

These are Treasonable Acts - Not Being An American First !

The Owners + Publishers + Editors + Reporters of the New York Times
and NewsWeek should be Held Fully Accountable by the US Congress
and the Federal Courts.

so say i - my opinions stated as facts ~ RHF

Oh Lord yes, I was not saying don't try the simple stuff first, in my
situation the first
feritte knocked maybe 30%. Very worthwhile, but not the "fix" I was
hoping. I
kept adding more and more cores and had really decided that feritte
cores just were
not the real deal.

One often overlooked source of feritte is the little solid, un split,
"beads, found
inside keyborads, mice, printers, and VGA, monitors. The split cores
are easier, but the
solid ones appear to work better.

Then I found the Bryant article and was amazed at what a few feet of
RG174 and
a couple of bucks of feritte cores did. I found the torroids form
switch mode power supplies to be a very mixed bag with a few working
just fine and most just so so.
SM cores are good for general RFI control from the other RFI sources in
your home.

I would rate noise reduction priorities to be something like:
1)the use of a good quality coax from any antenna to any receiver
2) antenna away from home and electric/teclo/catv lines
3)a decent ground
4)antenna up high
5)better ground
6)the best ground and feedline you can affoard

1A) picking the quitest RF devices you can for your home. This is very difficult
and frustrating, but can be very important. I had a commercial S-VHS VCR that
was a lousy with RFI.

We could argue for hours on the best noise reduction steps for use within the home.
Bonding all devices in your radio room to a good ground. Installation of effective RFI
"filters" on the power/data/signal paths of all RF emitters. A simple but often over
looked step can be to use a audio isolation transformer between your receiver(s) and
you PC/data decoder/active speakers etc. I found that after all of my other steps, I
had a nasty 60/120/160 hum from a ground loop. Another thing to look out for is noisy
wall warts. I hate the @#$^ things. Most are much noisier, RF wise, then "real"
DC power supplies.

For one viewpoint, see:
<http://home.computer.net/~pritch/shortwav.htm>
I found 1000pF caps to be the most effective in my experiments.

Terry

Source record: 55390

Hello.

I'm sorry that I can't give a first-hand opinion of the ICF-SW07 vs. the ICF-SW7600GR as I have never seen the former. From my reading of PASSPORT's reviews and the published specifications, I should guess that performance would be close with the auxiliary antenna attached (AN-LP2 on the 'SW07 and AN-LP1 on the '7600GR) and, with the whip, performance would be somewhat less with the 'SW07 compared to the '7600GR.

The price difference is what always "turned me off" the 'SW07 - it has the same number of bandwidths (one - count 'em), the same signal-strength indicator (none, really), and its SSB "clarifier" is digital - and can be mis-tuned a bit - instead of analog, as on the '7600GR; the '7600GR's SSB is unusually good for a portable.

Frankly, it has always appeared to me that you could get the same performance with the '7600GR/AN-LP1 combination for $220.00 that you could with the 'SW07/AN-LP2 combination for $360.00. And "style" (admittedly great for the 'SW07) has always been of little or no importance to me.

But you have to take my comments with the proverbial "grain-of-salt," because, as stated above, I have never seen nor operated an 'SW07.

Best,

Joe

3339. excellent receiver test

Newsgroup: rec.radio.shortwave
Date: 2005-12-22 03:50:07 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <MYednYDotvLrvzfe4p2dnA@comcast.com>
Source record: 55450

do you want to see if your receiver has the "right stuff" ? here is an excellent test.
in the evening (about 0200-0700) tune to 6139.8 with your receivers basic settings, you should get a terrible het (wiht 6140). if you can get rid of the het and listen to the low power south american local with great clarity then your receiver has the right stuff. if no het is present, then try later when the station on 6140 is present.

the S800 can do it supurbly with its selectable side band sync. MOST receivers can't even do a fair job or they take a lot of work to get barely decent results. some of the receivers that can do it give poor fidelity.

> "Below detection" means I can't even see it on a FFT display.

There is not much mystery to coax shielding. If putting ferrite on the coax is making a difference then you may not have a proper termination on the end. This is fixing a symptom not the problem. Disconnect the antenna on the far end and using very short leads place a 50 ohm resistor in place of the antenna across the coax end. Make sure no conductors are near that resistor like the end of the disconnected antenna. Tune the receiver through the band and you should hear nothing other than the radios birdies and internal noise. Any question here where the noise is coming from disconnect the coax from the radio to see if it is still there.

If the coax is in a location where the outer shield can induce a voltage on the very short resistor lead at the end then you can snap on a ferrite to see the difference it makes. If you have short leads to the resistor this should not be necessary. This test should show that the coax is not picking anything up that you can hear on the radio.

Now you should for sure be able to tell if the coax is the problem, which if it is in good shape should not be generating anything the receiver will pick up.

Why does putting the ferrite on the coax ends make a difference when it is connected to the antenna? Most likely if the coax is above ground the outer shield will pick up common mode signal energy and transfer it to the nearby antenna to which it is connected. This is the mode that is most likely causing you a problem that the ferrite on the outer shield seems to fix.

Firstly you need to cause the antenna impedance to be close to the coax impedance with a BALUN or UNUN or some other matching device.

If you still have a problem then you have options depending on the situation.

You could bury the coax so the earth around it will help dissipate the common mode signals on the outer braid preventing them from coupling to the antenna.

If the coax is strung above the ground you could distribute ferrite cores all along the coax run. You can also coil several turns of the coax near the antenna end and use one or more clamp on ferrite cores on the coil.

The sequence is then:

1. Test the coax with a 50 ohm resistor. This will show the coax to be OK and you become aware if the radio internal noise and birdies if any.

You should not pick up any signals from the coax cable.

If OK then the next step.

2. Test the antenna matching device unless the antenna is itself at the coax impedance and you are not using one. Use a resistor at the antenna impedance on the far side of the matching device again keeping the leads short.

You should not pick up any signals from the matching device and coax cable with the resistor substituted for the antenna.

If OK then the next step.

3. If common mode signals are coupling from the coax shield to the antenna then use ferrite cores on several turns of the coax coiled up or bury the coax. Ferrite on the coax at the radio end should not help.

I've bought a number of radios, equipment and books from Universal and
sold some items back to them on their used equipment list. I am 100%
satisfied in all aspects on all the transactions I have had with them.
The service could not have been better in all cases.

Geno1234 - The Mythical 'a poll'
- of every body
- from every where
- by every one
The Magic of 'a poll' !

'a poll' - such a weak liberal lie and left-wing distrotion.
[Not Even Worth a Capital Letter or Two :<]

Polling "Geno1234" - A Majority of One !

If 'only' Hard Core DNC Uber-Liberal Dean-i-acs were Asked . . .
Then Why Didn't They Get 100% ? ? ?

WHY - Because even a few members of the Left-Wing Radicals
can recognize that American Citizens in the USA or Overseas
who knowingly Conspires with Foreign Overseas Terrorists are
plainly not too smart. And that even 12% of the Uber-Liberal
Left-Wing Democrats can see that a Terrorist Enemy-of-the-State
is an Agent-of-War for the "Islamic JIHAD".

The Fact Is - That the Islam-O-Fascists are Un-Lawful Combatants
and those American Citizens who plot and plan the Mass Killings
of Americans and the Destruction of Entire US Cities are NOT
'common criminals' that can be handled by the Police and Our
Ordinary Judicial Counts. -

Wake-Up America - We Are At War ! - The Enemy Knows That Fact [.]

Dealing with the War-on-Terror is a Military Matter and the
President is the Commander-in-Chief of the US Military.

The US Congress Had Better Wake-Up and Put the USA on Allert
for the War-on-Terror within the American Homeland.

It Is My Humble Opinion - As An American Citizen :
That the President Did the Right Thing to Protect the
Lives of American Citizens and Protect the Nation [.]

God {Allah} Bless American and All Those Protecting the Nation
from Harm - amen, Amen. And AMEN ! ~ RHF

Unfortunately I use google for usenet. Overall, I like the google
interface with the exception that I can't kill fill assholes like
Cooltube. Occasionally I see something he is offering that I might
want, but I refuse to bid on anything that spammer sells. He ranks up
there (or is the phrase "down there" with Radio-Mart(RM).

If I could killfile someone, it would be cooltube, not John.

U.S. NAVAL OBSERVATORY WASHINGTON, D.C. 20392-5420 July 27, 2005 No. 69
TIME SERVICE ANNOUNCEMENT SERIES 14 UTC TIME STEP

1. The International Earth Rotation and Reference Systems Service (IERS) has announced the introduction of a time step to occur at the end of December, 2005.

2. Coordinated Universal Time (UTC) will be retarded by 1.0s so that the sequence of dates of the UTC markers will be:

2005 December 31 23h 59m 59s

2005 December 31 23h 59m 60s

2006 January 01 0h 0m 0s

3. The difference between UTC and International Atomic Time (TAI) is:

from 1999 01 Jan, UTC to 2006 01 January, UTC: TAI-UTC= +32s from 2006 01 Jan, UTC until further notice: TAI-UTC= +33s 4. Information regarding current and predicted values of UT1-UTC is provided in IERS Bulletin A.

5. UTC and all time scales based on UTC will be affected by this adjustment. However, Loran-C and GPS will not be adjusted physically. Times of Coincidence for LORAN-C are available on the Time Service Web Page (<http://tycho.usno.navy.mil/loran.html>http://tycho.usno.navy.mil/loran.html). For GPS, the leap second correction contained within the UTC data of sub frame 4, page 18 of the navigation message transmitted by satellites will change.

Before the leap second

GPS-UTC = +13s (i.e., GPS is ahead of UTC by thirteen seconds) After the leap second GPS-UTC = +14s (i.e., GPS will be ahead by fourteen seconds)

Nauticast Navigations system GmbH, the manufacturer of the NAUTICAST and NAUTICAST2 (certificate pending), Nauticast X-Pack DS (USCG Type-Approval Nr. 165.155/0007/0), also know as the ACR Global Watch UAIS, Global Watch UAIS2, Raytheon RM 808 AIS, Marine Technology Bridge mate AIS, has issued a Technical Bulletin alerting customers that the additional second will affect the performance of these systems, unless a manual re-synchronization takes place between January 1 and January 2 (visit <http://www.nauticast.com/>http://www.nauticast.com).

Mariners are advised to monitor any system that relies upon UTC (GPS, AIS, CELL PHONES etc., et al) for timing or positioning for possible anomalous operation because this "leap second" may affect the performance of other AIS units, as well as other electronic navigation systems.

> Telamon
> Ventura, California

Several minor points.
Very few receivers has a true 50 Ohm input Z.
With exception of active antennas, ver few antennas present a 50 Ohm
Z to a coax.

Real world experience, several years ago I was hired to design and
install
a WWV time recovery system. My initial effort used a dipole cut for
10MHz.
I uses a 1:1 balun to match the balanced dipole to the unbaanced coax.
The receiver was coupled to a dedicated PC ISA card and I had major
problems
with PC RFI getting back into the antenna. Experimenting with a
portable SW
receiver showed the PCs RF was going up the shield.

With the antenna disconnected, and with or with out a 75 ohm load, I
had no RF
from the PC gtting into the receiver. This was in late 1986. I was
able to use a
feritte rod wound with (maybe) ~20 turns and a variable capacitor to
resonate the
LC to 10MHZ. This showed me that even with a matched antenna, and
decent
receiver, R2000 (I am prone to using equipment I am familiar with) RFI
flowing up
the coax >could< be a source of major interference.

I finally went with a homebrew active antenna but I still had to use the 10MHz trap.

But even with ~100' of every coax I checked, terminated into the proper Z, with a
1.5:1 matching transformer for the use of 75 ohm coax to feed the receiver, I had
some engress from local (within ~10 miles) MW stations getting into through the
shield. This lead to my research on "transfer impedence". I still don't have any
more "understandable" data on that effect. Lots of math that causes my ears to
bleed.

Based on my experiences I think that more people have self inflicted RF via their
coax then commonly accepted.

As John Doty points out, a very good shield RF supression can be gained by
simply placing the coax under at least ~12' of soil. If the soil dies out completly,
this effectiveness will be degraded.

Terry

Anybody out there know where there is a website based downloads for Shortwave frequencies besides ILG??

If you are listening Mr. Freidwald, I and many others suggest that you are better off charging us for a fee for this service. Which many of us is willing to pay. It would also make life easier for yourself too. With none of this password B.S !!!

3375. Transforming your simple Ground Rod into a Ground Anchor : Is It Worth The Work ? - You Decide !

Newsgroup: rec.radio.shortwave
Date: 2005-12-22 18:11:29 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1135275088.968822.57080@g14g2000cwa.googlegroups.com>
Source record: 55485

For One and All,

Transforming your simple Ground Rod into a Ground Anchor :
Is It Worth The Work ? - You Decide !

Building a Ground Anchor :
"IF" - You can not Bury your Coax Cable for the full run from the House
to your Antenna.
Starting at your remotely located Ground Rod far away from the House.
Take a 10 Foot piece of 1/2" Copper Pipe and an Copper Elbow.
Cut the Pipe at 18" and Solder the two pieces of Pipe together using
the Elbow.
Dig a 12" Deep 8-10 Foot long Trench from the Ground Rod toward the
House.
Run your Coax Cable through the Pipe.
Put a PL-259 Plug or other Connector on the End of the Coax Cable to
Connect to your Antenna.
Empty Half a Bag of Cat-Litter along the Trench.
Place the Pipe with the Coax Cable in it in the Trench.
Secure the Short Vertical Section of the Pipe to the Ground Rod with
three evenly
spaced Hose Clamps.
TIP - Now is a good time to add any other Ground Radials if you wish.
Empty the other Half a Bag of Cat-Litter along the Trench.
Wet down the bottom of the Trench.
Fill the Trench with Dirt.
Wet down the Dirt returned to the Trench.
NOTE - This much more work then the simple Two Ferrite Snap-On Cores at
each end of the Coax Cable. But it will kill the majority of the RFI
getting to the Antenna.
PLUS - The simple Ground Rod has been transformer into a "Ground
Anchor" with both a Deep Vertical Rod and a Shallow Horizontal Tube
enclosing the Coax Cable.

OK - Everybody get out you old GI Trenching Tool and buy some Copper
Pipe - It's Time to get Anchored ! and Well Grounded Too ! - iane ~ RHF

from ELCHINO-

THE END OR THE BEGINNING OF THE END

Arch Conservative William F Buckey wrote bout President G.W Bush's attempt to justify the World Wide Electronic Surveillance of all 6.5 billions inhabitants of the Whole World and He fond it wanting.
Article 2 of the Constitution said that G.W Bush is the Commander in Chief of the Armed forces, i.e., of about 3 millions people maximum not of the whole 300 millions Americans let alone the 6.5 billions World Inhabitants .
Since He is the Protector of the Life and Security of all 300 millions of us, those who are US Citizens, to do his job properly, He has to have the right/duty to spy on all of us, for our own good, and of course on the rest of the World, 6.2 billions peoples who have no say.

But could He do this snooping without INDEPENDENT supervision, routine reviewing.
He Said He could not do it without revealing to our Enemy our Methodology which the latter, being very flexible to adapt, will find the way to overcome. He had a few senators whom his agents briefed very incompletely and these senators were under pain of prison and dishonor if they were to reveal the briefing had taken place. The judge who was an accomplice in this snooping scheme resigned voicing serious doubt on check and balance of the Executive by the Legislative , leading Buckey to voice that all three power centers of the US , the Presidency, the Legislative the Judiciary were at fault except the last one the Press which is doing its job.

If this continued surveilliance were to continue then who is going to prevent G.W. Bush or future Bushes (Jebb Bush ?) to do the snooping for the Bush's clan security and wealthand not for the benefit of all Americans/

This could be the end of Freedom as we know it in this Good Land of Our. But things are not going well for the Bush/Cheney Neocons cabal.

The Patriot Act was extended only for 6 months with 5 good Republican Senators (or Traitors if you are Red Jacket or Akl Zeller)siding with the Democrats to prevent a permanent status for this emergency and-full-of loopholes- law to destroy our Civil Liberty.

Tom Delay who masterminded the transformation of the US Republican House of Representatives into obedient Lobbyists might go to the slammer or at the least removed from the Whip position He abused profusely.

Ultra pro-military like Murtha dared to raise their opposition to a
no-end-in-sight war fought with insufficient means and public support.

I interpret these events to mean the beginning of the end for the
Neocons.

"The Department of Justice believes -- and the case law supports -- that the president has inherent authority to conduct warrantless physical searches for foreign intelligence purposes and that the president may, as he has done, delegate this authority to the attorney general," Clinton Deputy Attorney General Jamie S. Gorelick said in 1994 testimony before the House Permanent Select Committee on Intelligence.

http://www.ajc.com/opinion/content/opinion/1205/21edbarr.html

By BOB BARR
Published on: 12/21/05

"The President shall be commander in chief of the Army and Navy of the United States and when carrying out duties in such capacity shall not be subject to the laws of these United States or of this Constitution."

- Constitution of the United States, Article II, Sec. 2, as amended 2005

When President Bush explained, over the course of three days, his administration's secret interception of communications involving American citizens without court approval, he repeatedly cited three authorities for such action. One of these was Article II of our Constitution, which provides authority for the president to serve as commander in chief of the armed forces. Not relying on my memory - which has proved faulty from time to time (rarely, of course) - I reread Article II to determine if in fact there was language in it that I had missed previously, that when the president serves as commander in chief, he can order federal agencies to violate the law.

Of course, I found no such authority, because none exists. Such was never even presumed to be implied by the drafters of that magnificent document. In fact, federal courts - which over the decades have deferred greatly to the power of the president when he takes action involving national security - have never held that when a president dons the hat of commander in chief he simultaneously is immunized from having to follow the laws of the land or of the other provisions contained in the Constitution, including the Bill of Rights.

Yet, this is precisely the power the president is now claiming. Truly, it is a breathtaking assertion of presidential power. If, in fact, the country allows it to stand, then there will be virtually no limit to the areas into which it might extend. Remember, the president claims that the venue of the so-called "war" against terror is as much within our borders as outside, and its duration perpetual.

To be fair, the president did cite other authority in support of his assertion that he can order surreptitious surveillance of our citizens without following the laws that govern such actions.

First, he claims his "responsibility to protect the country" subsumes the authority to order surveillance of American citizens in contravention of the law. Of course, there is no "responsibility-to-protect-my-people" exception to the rule of law or

the applicability of the Bill of Rights anywhere in the Constitution, or in any prior decision of any federal court.

The president also refers repeatedly to the resolution passed by the Congress in the first days following the attacks of Sept. 11, 2001, as establishing his power to order the surveillance now at issue. However, a reading of that resolution, whether cursory or in-depth, reveals no such authority, explicit or implied. The resolution simply authorized the president "to use all necessary and appropriate force" against those responsible for planning, carrying out or assisting in the attacks of Sept. 11. The resolution went on to provide that such "necessary and appropriate force" might be used to prevent future acts of terrorism. Importantly, the resolution provided no authority whatsoever for any actions on the part of the president beyond authorizing the use of force.

To cite this resolution as authority to override specific federal laws that prohibit the surreptitious interception of communications of American citizens represents neither sound legal argument nor honest public policy.

The strange thing about all this is there was and is no practical reason for the president to go outside the law to do what he has done. Federal law provides ample authority for the federal government to intercept communications involving citizens or others who are suspected of having terrorist ties or actions. The law also provides a robust mechanism for rapid action if circumstances warrant. Notably, however, one is required to follow the terms of the law.

The White House has gone on the offensive in response to the burgeoning National Security Agency scandal - trying to shift the focus from its actions to those involving release of the story about the surveillance.

President Bush is also splitting words a la Clinton - asserting that it is OK to surveil without court approval if you are merely "detecting" as opposed to "monitoring." Finally, the president offers in his defense the fact that a few, selected members of Congress were briefed about the program, and that the program is reviewed regularly. These are all ingenious defenses, but none would make the unlawful lawful.

By the way, was the surveillance ordered by the president unlawful? I believe it was, but don't rely on my analysis. Here is what Gen. Michael Hayden, then the head of the NSA and now the deputy director of national intelligence, told a congressional panel in April 2000 (a hearing at which I also testified), in explaining whether the government could intercept communications of an American citizen in this country: "If that American person is in the United States of America, I must have a court order before I initiate any collection against him or her."

Seems pretty clear to me. And, if the president doesn't like the law,
the solution should be to amend, not violate it.

Warrantless physical searches go on all the time. Police officer pulls over
a car. Police officer says he smells alcohol, searches the car etc.

I do wonder however what physical searches were done without warrant during
the Clinton administration. Shifting blame to Clinton doesn't make Bush
right though.

Because for the majority of total morons out there history began in January of 2001 when George W. Bush assumed the Presidency and anything before that never happened and should be ignored.

Notice how the Neo Cons ignore the 'F' grade given to this
administration by the bi-partisan 9/11 commission when it comes to
making us safer? These people claim to be so concerned with fighting
terrorism that they're willing to let the President just break the law
whenever he feels like it. Funny then, that they couldn't care less
that Bush is doing virtually NOTHING to fight terrorism other than
illegally spy on U.S. citizens. Pitiful

What's really pitiful is that a dumbass such as yourself actually thinks that the President 'broke' any laws.

LMFAO at the totally retarded Liberal brain stem.

Now get out there and tote, boy!

By placing the coax inside of a copper tubepipe you have in effect created a triax
cable. Triax >can< (as in might or maybe) solve certain hard to control RFI engress issues.

I doubt the wisdom of bending coax in a tight 90 degree angle.
I have seen coax fail with such tight bends.

What type kitty litter are you sugesting? The clumping kind has a water absorbing,
clay, Bentonite?(sorry Yoder) that is great for pakcing in around ground rods. The
other type is just baked clay and not much better then sand.

I can say that a whole house ground ring that completly surrounds your home, with
all incoming cables well bonded greatly reduces the noise floor on some bands. And
oddly improves some weak signal reception. I am still trying to understand how I can
pick up a TIS staton some 20 miles away only after I added the ground ring.

As far as digging such a ditch with a GI trenching tool, forget it. An electrician
frined had a ditch witch that he had rented for a big job that took a lot less time
then he had thought. So he stopped by and ditched my entire perimeter in a couple
of hours. the thought of doing it by hand mankes me want to cry.

Probably what Clinton did wasn't right, but the GOP was more concerned
with his pecker.

Shrub was stupid enough to flaunt how he broke the law and said he will
continue to break the law. It is the equivalent of saying "bring it
on", except this time Shrub will get whacked.

When did he say that, 'tard boy?

Seems as though you might wish to pay closer attention to what people say.

I realize that will be tough for you to accomplish, but you might drop those DNC talking points and give it a try.

Dick Cheney has put it on the table as bluntly and thuggishly as a
mobster setting down a crowbar.

It may be the Holiday Season, but for the United States of America
we're back to Lexington and Concord.

Dick Cheney has put it on the table as bluntly and thuggishly as a
mobster setting down a crowbar. Cheney has said that he, Bush and
Rumsfeld are out to seize as much power as they can in the name of a
"robust" executive branch. It ain't no executive branch Cheney is
after; it's a dictatorship.

As we've said before, call it the Franco regime, the Stalin regime,
the Pinochet Regime, the Brezhnev regime, the Bush regime -- they are
all the same in terms of dictatorial powers that deny democracy.

Is the American Constitution going to be put through the shredder
until there is nothing left but strips of paper to throw out in the
trash? Or are some patriotic heroes going to rescue America?

Right now the "Centrist Democrats" are still sitting back acting as if
there's no immediate crisis. Their consultants warn them not to appear
too radical! As if the dismembering of democracy by Cheney and Bush is
not radical! As if the brazen seizure of illegal dictatorial powers is
not radical! As if the conduct of an unnecessary war costing thousands
of lives, fomenting a new generation of terrorists, and bankrupting
America is not radical!

The Bush dictatorship -- and it has clearly and publicly crossed the
threshold now -- is not going to tiptoe away. Dictatorships don't.
They hang on until they are displaced from positions of power.

If the Democrats don't start yelling fire soon, we'll just be left
with the burning hulk of what once was a great democracy. We are on
the verge of irreversibly becoming just another dictatorship "ism."

The terrorists have an ally in Dick Cheney and George W. Bush. Cheney
and Bush have accomplished what Osama never dreamed of achieving:
bringing down the American democracy and replacing it with a
dictatorship.

And what's more the Busheviks are totally inept at making the right strategic moves in actually confronting the threat of terrorism.

They are like all dictators, arrogant, elitist losers who seize permanent power because they could not hold onto it based on accomplishment -- because they only have a record of ruin to run on.

Meanwhile the John Kerrys of the world act as if they have all the time in the world to "win the next election." As if there were a chance of a fair one in a de facto dictatorship.

The satirist Jonathan Swift ("Gulliver's Travels") would tell us this. For the most part, we are left with a party composed of Democratic fools living in a political world of GOP knaves.

God help us all!

I looked for the "low power south american local " and only found a
"ROCKCRUSHER south american local " at 40 db over s-9 here in Kentucky??
I'm only using an Icom IC-78 Export Amateur rig...Superhet is gone by
hitting the notch...not that it mattered much anyway cause the station is a
lot louder than it is here.By the way I tried it in AM....SSB is too easy

Will turn on the
Tennessee Trash RX-340 after dinner and let you know if its a runner up with
the "800"

If thats a weak station I'd sure as hell worry about my radio if I hit a
strong one!

LOL

Mike is on the left coast in Washington state I believe. Your location
would make a south american station easy to receive.

That's Radio Lider on 6139.8 in Bogota, Colombia. I believe they run 5 kW.

I got the original bridge clock from the Battleship KENTUCKY

I got the original bridge compass too...Its 18 inches across!

Too bad they decided to scrap the old girl before they started assembly on her...they had all the parts laid out in giant buildings....from the 18 inch thick hull plates to the antenna's on top and everything between....we are talking a city sized pile of ship building materials!

Bet mine's worth more than yours?!! LOL

Practically speaking there is not much you can do about the receiver input not being 50 ohms but it should be close enough to terminate the coax to the extent that the the coax would be able to shield properly unless it is a really bad design.

So with the coax terminated with a 75 ohm resistor (for a 75 ohm system) instead of the antenna the receiver still picked up a local AM station AND the station was not there if the coax was disconnected from the radio input? Both tests need to pass for you to feel confident that this was a case of the local station making it past the shield. It's possible that the local stations signal could be on the mains making it way into the PC radio. If you are correct about this then it would be a pretty rare situation.

Dry ground does not have mobile ions for electric fields to push around thereby absorbing the energy.

The MW engress was noted in experiments in 3 diverse locations with
several different
receivers ranging from a R390, AOR7030+, R2000, and, a R5000. In one
location I used
also used several ham (Kenwood) general coverage transceivers. And yes
the MW
signals, with the exception of my home QTH, were only present with the
coax
connected to the receiver. And even at home the signal level jumped
enough to
clearly show the engress was fromthe coax. Interestingly a borrowed
~300' spool
of TV triax was reeled out and with only the outer shield groudned at
both ends,
with the inner shield grounded at the receiver end, with the far end
groudned or
ungrounded, had no engress.

The WWV dipole experiment was ~20 years ago and I used a borrowed
R5000,

a R392 and my trusty R2000.

At my home QTH I do get one MW station that is about 3 miles away and I swear
they must throw a lobe, they are ND daytime only, right across me. The AOR7030+
would receive this MW station on external 12V without an antenna. Only on internal
power, wiht the antenna input terminated, did the AOR reject the bugger.

I built a rat wire (1/4" square openings) faraday cage and can get the local MW on
my R2000s, my R390 and my DX398. Faraday cages do not offer 100% isolation.
It is weak but there. This is with all receivers powered from gell cells and the antenna
terminated in a 50 ohm non inductive load. The signal was week, but still there, just
barely, but there none the less.

I am working on trade to get a ~15 year old HP spectrum analyser that will allow
me to measure the real signal strength of various events. I am also working on
another trade for tuneable RF voltmeter that measures from 0.1uV and from 10KHZ
through ~15MHZ. Not perfect, but at least I should be able to get repeatable numbers.

Like I said this whole excercise has made me very interested in "transfer impedence".
Science is not magic, but sometimes the rules are arcane enough to look like magic
until you get enough info to start making sense.

For most applicaton minor coax imperfections shouldn't mater. Unless the local noise
floor near the coax is on the order of volts per meter any leakage will be, I think,
pretty minor. But when trying to reject strong local noise emitters like PCs VCRs and other QRM any leakage can be problematic. There are days I swear I am going to
move to the woods and live in a mud hut to et away from all the EMI crap.

Terry

I think the ARRL Handbook suggests running coax into the building through a 3-4" diameter tube filled with steel wool as another way of suppressing coupling along the outside of the shield from inside to outside and thence to the antenna.

Coiling the co-ax with several turns at the building entrance also helps and is the common technique at the base of the G5RV balanced feedline to choke off coupling to the outside of the shield.

Sounds like a repeat of the same thread you started back in May, viz
http://www.radio-forum.com/shortwave/R_melodia_coming_in_now_438287.html . I
would suggest that the interferer would have to be transmitting on one
sideband only for any receiver to be able to pull out the other sideband of
the desired station, if the carriers are co-channel. In which case, lots of
radios with fairly steep-skirted filters would do fine.

It attracts cats from miles around. They maintain the ground rod's conductivity by replenishing the required moisture AND reduce the coaxial cable munching rodent population at the same time.

It's a little known fact that coax is STILL rated in ravenous Rodent resistance. A 50 OHM (Outdoors Hungry Mice) Impedance cable is very common.

This is not an argument about:
a) spying on terrorists being ok or not ok
b) those who want to fight terrorism and those who don't

This is an argument about the president refusing to follow the law
that would not slow him down at all. The law simply requires him to go
to a secret court and get a f*cking warrant. They've turned down 5 out
of 30,000 requests in the last 20 years. And they even allow the
president to get a warrant *after* the spying has begun in emergency
cases, so there's not even the "ticking time bomb" scenario you repugs
who think you're so clever were all ready to toss out. There's no good
possible reason this thug president can't just go get a damn warrant.
Why do Republicans hate the rule of law, and love Dictatorship?

I find your communist Russian accent very disturbing. How long have you
been trying to frame TRUE Americans?

'Talikng Point'......gives them away EVERY time. When will these
totalitarian state lovers ever LEARN?

mike

the wit and wisdom of dxAss will follow shortly.

I think that the reason why this is a big deal is because no one feels that
Bush is being honest, that he has any integrity, and is probably up to no
good with these wiretaps.

http://en.wikinews.org/wiki/Greenpeace_activists_clash_with_Japanese_whaling_fleet_in_Sout
hern_Ocean

December 22, 2005

Environmental activist group Greenpeace have attempted to disrupt
Japan's Southern Ocean scientific whaling fleet. After searching for
the whaling fleet for nearly a month, the Greenpeace ships, MY
Esperanza and MY Arctic Sunrise, are floating alongside the Japanese
mothership in Australia's Antarctic territorial waters, directly south
of Tasmania.

The Japanese whaling fleet has an expected catch of over 900 minke
whales â?? more than double its previous catch. The fleet - owned by
Kyodo Senpaku and part-owned by Nissui, Japan's second-largest marine
products firm - is also targeting endangered fin whales for what they
claim is a scientific program. Fin whales are the second largest
creatures on earth.

Greenpeace say they have asked the whalers to stop whaling immediately
and return to Japan, but have recieved no response from the vessels. In
inflatables carrying banners which read "defend the whales" and "stop
the whaling," crew from the two ships declared their intention to stop
the hunt.

Leader of the Greenpeace expedition, Shane Rattenbury said their eight
small boats have begun to "interfere" with the whaling process.

"We positioned our two ships to the stern of the Japanese mother ship in order to prevent the whale being transferred on to the ship and we were successful in stopping that process for about 45-minutes," said Mr Rattenbury, describing a capture boat ramming the Greenpeace ship in an attempt to push it clear.

He said the Japanese boat fought back with water cannons and one of several Greenpeace inflatables capsized in the wash. All crew were retrieved without injury.

"We're going to do everything we can over the coming weeks to interfere with the whaling process, and stop the whales being killed," he said, "our small boats will be putting themselves between the harthingy and the whale.

In a radio call to the whaling vessels, from the bridge of the Arctic Sunrise, Yuko Hirono, of Greenpeace Japan called upon the whalers to stop killing whales "and leave the internationally recognised Southern Ocean Whale Sanctuary." Japan's scientific whaling has been the subject of repeated criticism by the International Whaling Commission.

The Japanese Institute of Cetacean Research, claim the amount of scientific data gathered by Japan's research program (JARPAII) is extensive and that Japan's whale research programs are conducted in accordance with the International Convention for the Regulation of Whaling. The Institute of Cetacean Research say their research does not involve illegal whaling.

Greenpeace say over the next 2 years 40 more fin whales will be added to the annual kill, along with 50 humpback whales.

"This whale hunt is unnecessary, unjustified, and unwanted," said Rattenbury. "Once the whales have been measured and weighed by the 'scientists' the butchers get to work and the whales are cut up and boxed for market. This is all about money and not science."

The area in which the Japanese fleet is hunting has been designated as the Antarctic Whale Sanctuary, in an effort to allow whale populations to recover after stocks were depleted during the commercial whaling of the last century.

Seventy crew and campaigners from 19 countries are on board the two Greenpeace vessels, including the UK, Netherlands, Canada, Australia, Ghana, Russia, Norway, Denmark, USA, France, Italy, Japan, Ireland, India, New Zealand, Spain, Sweden, Austria and Argentina.

Japan's whaling program is expected to kill nearly one thousand whales this season.

the serious problem with deep skirted filters is that the audio will stink !

besides almost no receivers are sold with deep skirts, most have the cheapest piece of garbage they can find. Don't know of any receiver sold in the past 20 years below $500 that had decent filters other than the S800 or E1

if anyone is aware of a sub $500 new radio with excellent filters please let me know. I may have forgotten (but I doubt it)

Body handling: HTML body converted to readable text

for a receiver with a good DSP section, that is true, but a manual notch is a pain in the neck in my opinion, you have to worry about the width and depth and centering it. the R8 notch was worthless as were most of the others I have worked with. a DSP autonotch is pretty nice tho.

Soon I'll be deployed to work in the south western EU, thus I'd like to know what shortwave broadcasts will be available there.

I figured out that I must look for the following target areas: sweu; weu; eu; naf; waf; af

Is the above statement true? Any other recommendations about how to get the best out of the ILG database?

Get the GNPDB software that uses ILG data
http://www.ilgradio.com/gnpdb/
(look for this heading "ILGRadio Broadcast Database Program GNPDB"
or go to http://www.boatanchors.de/software/

Use your ILG data file to create a GNPDB SW database that the program can use.
Run GNPDB. As a new install it will open a blank data page.
Click "Database" at the top.
Click "create"
You'll name the file you are creating. I use something like ILG200512 to help me
remember how recent the data is.
Choose the type of ILG data file you've got... text or dbase.
Click the "Select ILG source file" button.
If you copy your ILG data to the GNPDB folder you've just made the source file will
instantly show up, otherwise you can browse to your ILG data file by using the "Look In"
box "drop
down arrow".
After you find your ILG data and select it, click "open" and then "ok" to make the GNPDB
file that
will
be used by the program.
Click "help" in GNPDB and read about "filters".
Look at how some of the predefined filters are set up.
You can create filters to show you any type of data you want... country, target, time,
frequency,
language, station and "on now".
A few of my filters include "CRI to America", "Radio Havana in English", "41 meter band on
now",
"All English on now"
Very handy program.

So the S800 and E1 filters do not have 'deep' skirts but somehow do the
needed sideband suppression and sound better than 'fairly steep-skirted'
filters? The demod is not doing the interference suppression unless I'm
missing something. There is a logical inconsistency here.....

I don't recall that it was being reported as "smooth" at all. I don't think anyone expected that it would go smoothly; and frankly, even if the election was on the up-and-up, how could anyone expect that one group or another in Iraq would not challenge the results if they didn't get their own slate elected? Surely our own relatively well-run US elections have taught us that many things can and do wrong, not the least of which is heated bickering afterwards.

There is absoutely nothing surprising about the aftermath so far. Disappointing perhaps, but completely predictable.

From the current World of Radio...(What a shock to discover a localstation doing this<G>)** U S A. WAPI 1070 - WJOX 690, Alabama DX Tests, December 27-29

Exciting News! DX'ers will have another holiday treat to look forward to this year. On December 27-29th, two Birmingham, Alabama stations will run the new "inventory insert" test format suggested by Fred V. last year. Special thanks to CE Frank Giardina for this test! Details below...

WAPI 1070 khz Birmingham, AL DX Test
WJOX 690 khz Birmingham, AL DX Test
Date(s): December 27-29, 05
Time: Midnight CST-0300 CST (0600-0900 UT)
:60 Second long tests in duration. "Inventory Insert" format.

Modes of Operation: Night Power/Pattern.
Programming: Morse Code ID's, Sweep Tones, Voice ID.
Notes:

Both WAPI and WJOX will air one insert at the TOH. :59 minutes fixed. Both stations will air a 2nd sixty second long test each hour according to the schedule below:

WAPI's 2nd test will come at :30 past the hour, each hour between midnight and 3 AM.

WJOX's 2nd test will "float" between :19 after and :34 minutes each hour between midnight and 3 AM, depending on programming.

Reception reports are desired via e-mail (first choice) and snail mail (only if e-mail is not available) Station would prefer to received recordings of the test (MP3, CD, or cassette). Submit reports to:

les @ highnoonfilm.com

Please put "WAPI/WJOX DX Test" in the subject line. All standard mail reports should go to:
Les Rayburn
High Noon Film
100 Centerview Drive Suite 111
Birmingham, AL 35216

>The serious problem with deep skirted filters is that the audio will stink !<

Debatable, but with PBT, or even a tiny detuning, this problem is
largely eliminated - and some receivers in that price range and up have
the PBT feature.

One must use whatever tools one has to achieve copy.

I'm using the news server which comes with my AT&T worldnet service. Both worldnet's web server and news server have worked very well for me since I signed on about three years ago. Worldnet's least expensive dial-up package used to be a great deal, but it's gotten more expensive and there's now plenty of other inexpensive packages which beat it in price. I have no intention of changing services, as long as worldnet stays reliable and doesn't jack up their prices unreasonably.

Some ISPs might have a news server for their subscribers. It might be worth a phone call or e-mail to find out.

I'm using Outlook Express as my usenet reader. I have no doubt there are better newsreaders than OE, but OE serves the purpose for me. I've played with Forte's Agent/Free Agent for reading groups and it seems like a good product, but, in my case, I just don't have the motivation to learn something new. I suppose it might also be worth asking the group about various newsreaders and what are the most useful features.

Of course, my expectations of "good service", "inexpensive" and "serves the purpose" might be not be very high. I used to be an AOLer.

Democracy in action.

Criticisms of last week's elections are seen by some as jockeying for position by both Sunnis and former Prime Minister Ayad Allawi, a secular Shiite, before negotiations on forming a new coalition government begin. No group is expected to win a majority of the legislature's 275 seats.

The formerly dominant Sunni minority fears being marginalized by the Shiite majority, which was oppressed during Saddam's reign.

"The heart of the wise inclines to the right and the heart of a fool, to the left." (Ecclesiastes 10:2)

...some accused Iran of having a hand in election fraud.

Iraqi border police seized a tanker that had just crossed from Iran filled with thousands of forged ballots, an official at the Interior Ministry said.

Rumors and "dirty tricks" have featured in the build-up to the election

Iraqi Voter - "Anybody who doesn't appreciate what America has done and President Bush, let them go to hell"...

U.S. ambassador to Iraq Zalmay Khalilzad called Iran a "predatory state".

Berlin calls in Iranian diplomat...

Almost everything that is now written about Iraq rings not quite right:
...
The Left now risks losing its self-proclaimed moral appeal. It had trashed the efforts in Iraq for months on end, demanded a withdrawal - only recently to learn from polls that an unhappy public may also be unhappy with it for advocating fleeing while American soldiers are in harm's way.
...
http://www.victorhanson.com/articles/hanson120205.html

Huge weapons cache found in Iraq

...dug up more than a thousand aging rockets and missiles wrapped in plastic, some of which had been buried as recently as two weeks ago

"This is the mother lode, right here," Sgt. Jeremy Galusha, 25, of Dallas, Ore., said, leaning on a shovel after uncovering more than 20 Soviet missiles.

...the plastic around some of the rockets - of Soviet, German and French origins - appeared to be fresh and had not deteriorated as it had on some of the older munitions.

Ukraine admits sending missiles to Iran & Communist China

The government of Ukraine "admitted to exporting missiles, designed to carry nuclear warheads, to Iran and China"

Twelve missiles went to Iran and six to China, Svyatoslav Piskun, Ukraine's prosecutor-general, said.

The X-55 cruise missiles, also known as Kh-55s or AS-15s, were exported in 2001, though none had the nuclear warheads they were designed to carry. The range of the missiles could carry them from Iran to Israel or from the Asian mainland to Japan [or Taiwan].

http://www.washingtontimes.com/upi-breaking/20050318-074652-3615r.htm

Iran recently acquired 12 cruise missiles with a range of up to 3,000 kilometers... the missiles had the ability to carry a nuclear warhead.

Tehran's policy on the Chechen conflict seems to have taken an abrupt turn. In a stratagem to blackmail Russia into supplying nuclear technology to the Islamic regime, Iran has begun to train Chechen rebels in advanced terror techniques.

British press reported in November that 'Western Intelligence reports' specified locations, techniques, and ideological/political training of the Chechens. Iran's Islamic Revolutionary Guards were implicated as the main force in training. Iran's scheme will most likely falter since Putin's government has taken hardline approaches to the Chechnya issue. Tehran's control over Hizbollah cannot be replicated with the Chechen rebels, as logistical challenges and recent commitment of Russia in Operation Active Endeavour would be too difficult to maintain support and control of any Iranian sponsored terror cells.

As a main defense systems and nuclear technology supplier to Iran, Russia will obviously take into consideration this turn in policy as a warning sign for future nuclear negotiations.

Syria to hide Iranian nuclear weapons

Syria has signed a pledge to store Iranian nuclear weapons and missiles. The London-based Jane's Defence Weekly reported that Iran and Syria signed a strategic accord meant to protect either country from international pressure regarding their weapons programs.

Diplomatic sources notice that Syria agreed to store Iranian materials and weapons should Tehran come under United Nations sanctions.

Iran also pledged to grant haven to any Syrian intelligence officer indicted by the UN or Lebanon. Five Syrian officers have been questioned by the UN regarding the Hariri assassination, Middle East Newsline reported. "The sensitive chapter in the accord includes Syria's commitment to allow Iran to safely store weapons, sensitive equipment or even hazardous materials on Syrian soil should Iran need such help in a time of crisis," Jane's said.

The accord also obligated Syria to continue to supply the Iranian-sponsored Hizbullah with weapons, ammunition and communications. Iran has been the leading weapons supplier to Hizbullah, with about 15,000 missiles and rockets along the Israeli-Lebanese border.

The accord, negotiations of which began in 2004, was signed on November 14 and meant to prepare for economic sanctions imposed on either Iran or Syria. Under the accord, Jane's said, Iran would relay financial aid to Syria in an effort to ease Western sanctions.

Iran also pledged to supply a range of military aid to Syria. Jane's cited technology for weapons of mass destruction as well as conventional arms, ammunition and training of Syrian military. Tehran would seek to upgrade Syrian ballistic missiles and chemical weapons systems. Under the accord, Iran would also be prepared to operate "advanced weapon systems in Syria during a military confrontation." Jane's said.

http://www.asianews.it/view.php?l=en&art=4934

Iran set to upset Egypt with '34 Bullets for Pharaoh'

TEHRAN (AFP) - An extremist Iranian Islamist group announced it was working on a film about the 1981 assassination of Egyptian president Anwar Sadat entitled "34 Bullets for the Pharaoh".

The documentary, produced by the "Committee for the Glorification of Martyrs for the World Islamic Movement", is certain to further upset Cairo -- with whom Tehran cut diplomatic ties after Sadat signed the 1979 Camp David peace accord with Israel.

"The documentary will feature raw images of the assassination of Sadat, the trial of the martyr Khaled Islamboli and his companions ... and their motivation for executing the signatory of the first peace treaty between an Arab country and Israel," the group promised in a statement faxed to AFP.

Beirut

- Thousands of Lebanese gathered in Martyrs' Square to say farewell to Gibran Tueni, the slain Christian lawmaker and journalist, who was killed in a car bomb on Monday. Waving Lebanese flags... A general strike is called throughout the country. Syria is blamed for the attack.

The Syrian regime has done just enough to ward off the immediate threat of sanctions being imposed on account of its alleged role in the assassination of Rafiq al-Hariri, the former Lebanese prime minister. However, the second report issued by the UN investigation team reaffirms the salient conclusions of the fist one--notably that Syrian intelligence officials were implicated--and describes as "suspects" five Syrians recently interviewed by the team in Vienna.

Just before the report was published on December 12th Lebanon witnessed another car bomb assassination. The victim this time was Gebran Tueni, managing editor of the Al Nahar newspaper group and a recently elected MP. Mr Tueni, an outspoken critic of the Syrian regime, had declared himself to

be at the top of a Damascus hitlist of assassination targets. He had only been back in Lebanon for a matter of hours from self-imposed exile in France when the armoured car in which he was travelling in east Beirut was blown off the road by a powerful explosion, apparently a bomb placed in a parked vehicle and set off by remote control. The operation was widely assumed within Lebanon to have been carried out by agents of the Syrian regime. The presumed intention was to show that Lebanese (and, indeed, Syrian) critics of the Damascus regime cannot count on the protection of international powers, and to demonstrate that the regime will stop at nothing in its efforts to ensure its survival.

On Wednesday night's TruNews broadcast, Rick Wiles tolds us they are trying to re-paganize Christmas by -- banning Christmas trees and the colors red and green!!!

I anxiously listened through last night's End Times Newscast, fully expecting Bro. Wiles to again share the breadth and depth of his historical knowledge on this matter. But there was no further reference to the pagan Christmas tree supression plot, nor the Scriptural Colors.

Well, there really was no need for Bro. Wiles to further explain this latest attack on Fundamentalist Christianity. The "pagans" are, no doubt, the ACLU, again working hand-in-glove with Satan. I'm sure glad Bro. Wiles keeps a eye on those pagans, and he'll tell us what they'll do next. Maybe the pagans will try to tell us to lead simple, spirtual lives. Maybe they'll try to tell us to dress in black (hat buckles optional). They might try to sell us on the idea that Dec. 25 actually has little to do with Christ.

Those pagans could even go so far as to put the X back in Xmas.

Frank Dresser

Word!!
I'm totally with you on this man.
Everyone forced to work at Walmart, no wait, ANYWHERE, no matter their position/function should demand and be provided whatever salary or hourly rate of pay that they alone have pre-determined will allow them to "make it".

Really, its so simple! This idea of mine could work my brothers and sisters.
Lets get legs under this thing doods.
Its us against "The MAN" man. Right on!

Wait, I just thought it through Justin. Our next Eminem CD would likely end up being about $275.50
Never mind.

** U S A. Alistair Cooke's 'bones stolen'
By Guto Harri, BBC News, New York
http://news.bbc.co.uk/2/hi/americas/4552742.stm

Alistair Cooke was mourned on both sides of the Atlantic [caption]
An investigation is under way in New York into allegations that the bones of the late broadcaster Alistair Cooke were stolen before his cremation. Mr Cooke, known for the Letter from America he broadcast for the BBC, died almost two years ago, aged 95.

According to the New York Daily News his bones were stolen by a criminal ring trading body parts. They were later sold by a biomedical tissue company now under investigation, the paper claims.

This is a grim and ghoulish tale which has understandably appalled everyone who knew Alistair Cooke.

When he died of cancer in March 2004 his body was taken to a funeral home on the Upper East Side of Manhattan. Two days later the family received his ashes.

Dental implants

As tributes were paid on both sides of the Atlantic to this iconic broadcaster, his family grieved.

Now they have been told that body snatchers allegedly surgically removed his bones and sold them for more than $7,000 (ï¿½4,000) to a company supplying parts for use in dental implants and various orthopaedic procedures.

The US attorney general's office in Brooklyn is investigating an elaborate ring involving funeral directors, surgeons and entrepreneurs.

Alistair Cooke's daughter, Susan Kittredge, said she was shocked and saddened. And, as the cause of his death was at least partially bone cancer, she was equally appalled that patients in need of healthy transplant pieces could have received these diseased bones (via Terry Krueger, DXLD) And here`s the original story:

TV HOST COOKE'S BODY PLUNDERED BY GHOULS
By WILLIAM SHERMAN, NY DAILY NEWS STAFF WRITER

The ghoulish body parts for sale ring stole the bones of "Masterpiece Theatre" host Alistair Cooke just before he was cremated, the Daily News has learned.

The celebrated broadcaster and actor died March 30, 2004, of lung cancer that spread to his bones. The next day, without permission of any family members, body snatchers surgically carved out the 95-year-old's diseased bones.

The bones were sold for more than $7,000 to two tissue processing companies for eventual transplant procedures, sources told The News.

"I hope those guys burn in hell for what they did," said longtime Cooke family attorney David Grossberg.

The alleged leader of the body-snatching ring is Michael Mastromarino, whose operations are under investigation by the Brooklyn district attorney's office.

Mastromarino ran Biomedical Tissue Services Ltd., a tremendously profitable tissue recovery business that sold body parts, including bone, skin and cardiac valves.

After processing, Cooke's bones could have been used for dental implants or numerous orthopedic procedures including dowels for damaged spines.

Cooke's remains were sold by Mastromarino to processing companies Regeneration Technologies Inc., of Alachua, Fla., and Tutogen Medical Inc., of Paterson, N.J.

A spokesman for Tutogen did not return a telephone call. A spokesman for Regeneration Technologies had no comment.

But Cooke's daughter, Susan Kittredge, who learned what happened to her father only last week, told The News she was "shocked and saddened that following his death, parts of his body were illegally sold for transplant."

"That people in need of healing should have received his body parts, considering his age and the fact that he was ill when he died, is as appalling to the family as is that his remains were violated," she said.

The use of cancerous bone for transplant is a violation of Food and Drug Administration regulations and the use of body parts from the aged also is against transplant protocol.

But in paperwork given the two processing companies, Mastromarino allegedly changed Cooke's "cause of death" to heart attack and changed his age from 95 to 85, according to sources.

Mastromarino, along with his former partner Joseph Nicelli, an embalmer, are being probed for allegedly forging hundreds of such records in their business, which ran from 2000 until October 2005, when The News first disclosed the details of the Brooklyn probe.

Mastromarino routinely paid funeral directors for each corpse provided to his company. Cooke's corpse was picked up at his Fifth

Ave. home by the New York Mortuary Services Inc., a private funeral home at 2242 First Ave. Kittredge said she got what she believed to be her father's ashes two days later.

Timothy O'Brien, head of New York Mortuary Services did not return calls. His attorney had no comment.

GYT wrote:
> What does the cat litter do? I've heard to use rock salt.

Kitty liter is made from clay.

There are 2 types of kitty liter, the common plain baked clay, and the more
expensive clumping type. The clumping type has a odd clay (Bentonite) that
absorbs water, swells and this clay is often used to line farm ponds to seal
against the water draining into the soil.

Even the normal, non clumping, type holds water very well reducing the
resistance of the ground "rod" to the adjacent soil.

I have had much better luck with epsom salt. Less corosive, and less toxic
to the lawn. Table salt is a killer on most grass.

People also like Coper Sulate, but I have read several studies by companies
like PolyPhaser where they compared common soil treatments for effectiveness,
cost, toxicity etc. The minimal difference between the (fairly) nontoxic epsom salt
and the very toxic coper sulfate was shown toi be very minimal. Here in KY if you
are caught using copper sulfate you will face serious fines.

Regardless of what type chemical, table salt, epsom salt, or copper sulfate,
you use, you have to replace them as they leach form the soil.

Yeah, this is pretty bad. I have been given to understand by at least two oncologists plus other medical professionals that the use of a cancerous transplanted organ - be it bone, heart, lung or other tissue - could conceivably cause the cancer from the donor to be restarted in the recipient.

This, on top of the fact that this activity is just plain gruesome, whether the parts are from a celebrity like Cooke or from an unknown person.

I knew a guy in college who came form a mortuary-owning family. The guy was a brilliant chemist - he was a year behind me, and by the time I graduated from meterology school, he already had in excess of 20 patents for new chemicals he'd developed, some of which had already been sold. A *great* organ player, too. Noting that both of these disciplines could be useful in mortuary circles, I believe he's gone into the family business; I wonder what he'd think of all this...

Thanks for this, Sanjaya. I hadn't really looked at this before because I've been fairly satisfied with the Fineware Radio Listeners Database (RLDB). I didn't realize that the GNPDB had these user defined filter options. I'll have to give it a try.

RLDB is nonetheless a nice program, although the program is no longer supported by Fineware. It looks like the German firm Thiecom has the RLDB program available for download at the following link:

http://www.thiecom.de/ftp/--%3ESoftware/logbuch/win/

Best,

Junius

Mr Howard - When will you act to protect whales?

Southern Ocean/Sydney Thursday, 22 December, 2005 : Greenpeace activists again took to the water today, - this time putting themselves between the harpoons and the whales.
"We've been able to protect some whales from being killed, and slowing the hunt down significantly. One of our activists managed to climb onto a whale carcass, trying to slow down the transfer process. Unfortunately the whalers were determined and have killed more than four whales today."
In Sydney today, the environment group called on John Howard to demonstrate that the government is 'vehemently opposed to whaling', by ensuring a Japanese whaling ship due into Hobart on Saturday does not rejoin the whaling fleet.
"If the Australian government were doing all it could to stop the senseless Japanese whaling, Greenpeace would not have to be out in the Antarctic getting battered by water cannons," said Greenpeace CEO Steve Shallhorn.
"It is a bit rich for John Howard to criticise the activities of Greenpeace, and look good in the eyes of the Australian public with empty words of opposition," said Shallhorn. "The vast majority of Australians who are sickened by the annual whale hunt expect the government to stop shielding behind failed diplomacy."
"With the Australian government an international pariah on climate change, you would think they would go beyond empty rhetoric, and redeem themselves by taking firm action to end whaling."
"The whaling vessel Kaiko Maru will arrive in Hobart on Saturday December 24, to deliver a sick crew member to hospital. We call on the Australian government to do all it can to ensure that this whaling vessel does not return to the killing grounds."
"Greenpeace in Japan has let the whaling company Kyodo Senpaku know that we are aware of the arrival of their whaling ship in Hobart, and that we will not interfere with the medical evacuation of the crew member," said Shallhorn, "But we want to see the ship stopped from rejoining the whale hunt."
This year the Fisheries Agency of Japan has more than doubled its planned catch of minke whales to 935 and added 10 endangered fin whales. Over the next 2 years 40 more fin whales will be added to the annual kill along with 50 humpback

3489. Gas Tube Lightning Protectors: Which To Get ?

Newsgroup: rec.radio.shortwave
Date: 2005-12-23 21:18:28 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <tr6dnTWewNkH9DHenZ2dnUVZ_tOdnZ2d@comcast.com>
Source record: 55549

Hello:

The folks at Antenna Supermarker have a gas tube lightning protector that they claim fires at 1/7 (other text says 1/17)

the voltage of...

"Zap TrapperT Electronic Gas Tube Lightning Arrestors. Receive-only design shunts damaging transients to ground at only 1/17th the voltage buildup as compared to the commonly available 200 watt transmit-type arrestors, providing maximum solid state receiver protection.

Protect your investment - combine an excellent shortwave receiving antenna with the best receiver protection money can buy.

RCVR/T- Our maximum-sensitivity receive-only electronic Gas Tube Lightning Surge voltage protector * Fires at only 1/7th of the voltage buildup that is required to activate the lowest power (200 Watt) transmitting-type lightning arrestors available, thus providing vastly superior protection for solid state receivers * Uses two gas tubes * /T model for twinlead-fed and longwire antennas * Input is two binding posts, output is also two binding posts * No patch cable required. $22.95 "

I guess, but am not sure, that they are comparing the firing voltage to the typical Alpha-Delta units.

I'm interest in getting some unit, frankly, probably more for supposed peace of mind than anything else.

The 1/7 firing voltage sounds real good, as I do listening only, and am always quite worried about voltage transients possibly being picked up and ruining the front end of my receiver from nearby strikes if I'm not home to disconnect things.

Anyone have any thoughts or opinions on the Alpha Delta units and these from Antenna Supermarket ?

Which would you buy for a receive only setup ?

Thanks,

Bob

ground-shaking impacts could kick up moondust, possibly over a wide
area. Moondust is electrostatically charged and notoriously clingy.
(See "Mesmerized by Moondust" from Science@NASA.) Even a small amount
of moondust can be a great nuisance: it gets into spacesuit joints and
seals, clings to faceplates, and even makes the air smell when it is
tramped indoors by moonwalkers.

If I lived where there's lightning I would.

I'd also use something like this to get my whole antenna system
connected to DC ground. More important here because of steady wind
and blowing particles.

More than 30 million Americans make $9.00 or less per hour. That's
just about poverty level. I'm not sure how many people there are in
the work force but 30 million is a far portion of the total.

That would pretty much be correct for a family of four based upon the 2004
stats: $18,850.

Say one wage earner at$9/h and a 40 hour week X 52 = 18720.

The poverty level in 2004 for an individual was $9,310.

This is a great evening for receiving stations up and down the
Northeast here in the Washington DC area. AM 740 (Toronto) and
stations
from Albany/NYC area are just booming in this evening (6-7PM local
time), along with multiple stations from Florida/Texas/Chicago.

The SW bands were great this afternoon too (kinda suck right now).

Tim.

AS GDTs form plasma discharge paths, the tube voltage
changes. The selection of a GDT is a compromise between
lowest voltage possible and GDT life expectancy. Many
transients need not be earthed by the GDT when too small to
damage electronics. IOW transients that are irrelevant would
only degrade the GDT.

A benchmark in this stuff is www.polyphaser.com . Visit
their (or other companies that also have) application notes
for more details.

What you're more interested in is not what voltage it fires at but how
fast. A visible spark from a simple static discharge is on the order
of 3000 volts or so... what you want is a gas-discharge tube that
fires in the nanoseconds -- faster than any semiconductor.

I recommend Polyphaser. I use them, I'm pleased with them, and
they've survived multiple near-strikes and one direct hit.

IT IS VERY IMPORTANT TO REMEMBER, though, that a gas-tube is only as
good as the SYSTEM set up around it. Polyphaser has papers on how to
do this sort of thing on their web page. Don't let the complexity of
their suggestions overwhelm you -- do stuff one-step-at-a-time as you
can:

Understand the concept of a ground window and use it
Ground rods that become ground rod systems as time, money and patience
allow
Checking over your system to make sure that nothing bypasses your
ground window

...etc.

I'm no shill for Polyphaser, nor do I have any financial interest,
other than the protection of my equipment. I'm just a satisfied
customer.

DX Savant,

Yes - I have one of these "Ground Anchors" as described
down the hill at about 75 Feet from the side of the house.
Currently the Inverted "L" Wire Antenna Element is a 30
Feet Vertical-Up-Leg and 70 Foot Horizontal-Out-Arm;
going from North-East to South-West.

IMHO - For Noise Reduction here - It works about as well as
the Two Snap-On Ferrite Cores at each end of the Coax Cable.

I did it more for 'additional' Lighning Protection :
+ 75 Feet Away from the House
+ Ground Rod
+ Shape 90* Bend
+ One Foot Under-Ground Metal Tube

hope that helps - iane ~ RHF

GYT,

The Theory Goes - The Cat Litter (Kitty Litter) absorbs Moisture
and holds the Moisture around the Ground Rod / Tube Area.
This improves the Ground Conductivity and the effectiveness
of the Ground System. (In Theory)

READ - Great Ground with Kitten Litter [Bentonite]
- by Guy Atkins on HCDX - August 10, 2000
http://www.hard-core-dx.com/nordicdx/antenna/ground/bentonite.html
Bentonite is great for getting an excellent conductive ground.

"GROUND ROD SOIL"
My General Recommendation for Ground Rod Soil is to take
the Original Soil from the Ground Rod Hole or Trench and
create a "50 / 50 Mixture" of original Soil (50%) and the
other (50%) made up of these parts of 1/2 "Bentonite" (clay
kitty litter); 1/3 Epson Salt; and 1/6 Copper Sulfate works
well 'in-the-ground' around ground rod. Then Repeatly Water
this down and 'tamp-it-down' lightly over the next few days.

hope this helps - iane ~ RHF

Terry R2000SW,

I would agree that cost/value and effectiveness wise
that EPSOM Salt "Magnesium Sulfate" is the most
commonly available and least toxic to use.

Most local DrugsStores and the National Chains carry Epsom Salt
in Four Pound (4 Lbs.) in Half Gallon Waxcard Milk Boxes
http://herbalremedies.com/epsom-salt-4lbs.html

For One and All,

In WW II FDR as Commander-in-Chief started doing the Warrantless Searches and Every (Each and Everyone) US President has conducted Foreign Intelligence Gathering on Real, Potential and Perceived Threats to our Nation Security.

WHY - Even "Mister Morality" : former president Jimmy Carter - Did IT !

FWIW - Bill Clinton as US President - Did It !

"IF" an American Citizen happens to be on the 'other' End-of-the-Line they are not the Target of Justification until they demonstrate that they are a Spy for the Foreign Powers such as International Terrorist; or that they are in-fact an Un-Law Combatants and are a Part of a Military Action Against the USA and it's Citizens. Then 'they' the US Citizen are not simply criminals - but part of a Foreign Terrorist Organization that is "At War" with the USA and trying to accomplish Mass Murder upon American Citizens and Destroy Whole US Cities.

The US Congress Is Out To Lunch On This Issue [.] - wrong, Wrong. WRONG !

The Democrat Party of the USA - Is Selling-Out the Safety and Security of the USA and the Lives of American Citizens for Political Gain.

The Liberal Media Elite all fully know that this has always been done by US Presidents since FDR. The Left-Wing Media "News Makers" are Again Showing Their Liberal Bias and Slant by making this a HeadLine Issue when they fully know that the Safety and Security of the USA is at stake and American Lives are At Risk [.]

so say i - my opinions stated as facts ~ RHF

3527. OT Bush Recording All Phone Calls And Emails Of Americans

Newsgroup: rec.radio.shortwave
Date: 2005-12-24 13:37:06 UTC
From: David <rickets@knac.com>
Message-ID: <oljqq114jnes244jg1hsl00t1ps6gb9q5v@4ax.com>
Source record: 55587

NEW YORK - The National Security Agency has conducted much broader surveillance of e-mails and phone calls ï¿½ without court orders ï¿½ than the Bush administration has acknowledged, The New York Times reported on its Web site.

The NSA, with help from American telecommunications companies, obtained access to streams of domestic and international communications, said the Times in the report late Friday, citing unidentified current and former government officials.

The story did not name the companies.

Since the Times disclosed the domestic spying program last week, President Bush has stressed that his executive order allowing the eavesdropping was limited to people with known links to al-Qaida.

But the Times said that NSA technicians have combed through large volumes of phone and Internet traffic in search of patterns that might lead to terrorists.

The volume of information harvested from telecommunications data and voice networks, without court-approved warrants, is much larger than the White House has acknowledged, the paper said, quoting an unnamed official.

The story quoted a former technology manager at a major telecommunications firm as saying that companies have been storing information on calling patterns since the Sept. 11 attacks, and giving it to the federal government. Neither the manager nor the company he worked for was identified.

Unless you're within 5 miles of a high-power (=/> 10 kW) AM station
this thing works great. I'd use the attenuator with a portable.

"Student's tall tale revealed
Confesses fabricating US surveillance story

By Jonathan Saltzman, Globe Staff ï¿½|ï¿½ December 24, 2005

It rocketed across the Internet a week ago, a startling newspaper report that agents from the US Department of Homeland Security had visited a student at the University of Massachusetts at Dartmouth at his New Bedford home simply because he had tried to borrow Mao Tse-Tung's ''Little Red Book" for a history seminar on totalitarian goverments.

The story, first reported in last Saturday's New Bedford Standard-Times, was picked up by other news organizations, prompted diatribes on left-wing and right-wing blogs, and even turned up in an op-ed piece written by Senator Edward M. Kennedy in the Globe.

But yesterday, the student confessed that he had made it up after being confronted by the professor who had repeated the story to a Standard-Times reporter.

The professor, Brian Glyn Williams, said he went to his former student's house and asked about inconsistencies in his story. The 22-year-old student admitted it was a hoax, Williams said.

''I made it up," the professor recalled him saying. ''I'm sorry. . . . I'm so relieved that it's over."

.
.
.

The student later told the professors he had requested the book at UMass-Amherst. But officials there said UMass-Dartmouth students cannot use their ID cards at the Amherst library and that all interlibrary requests are made by the libraries, not students.

A Homeland Security spokeswoman in Washington said she had no record of any interview of a UMass-Dartmouth student and pointed out that the department does not have its own agents. An FBI spokeswoman in Boston also expressed doubt.

That didn't stop it from buzzing around the Internet and even being picked up by Kennedy, who cited it as the latest example of the Bush

administration's intrusion on civil liberties.

''Incredibly, we are now in an era where reading a controversial book may be evidence of a link to terrorist," he wrote in an op-ed piece in Thursday's Globe.

Laura Capps, a Kennedy spokeswoman, said last night that the senator cited ''public reports" in his opinion piece. Even if the assertion was a hoax, she said, it did not detract from Kennedy's broader point that the Bush administration has gone too far in engaging in surveillance."

----

http://www.boston.com/news/globe/editorial_opinion/oped/articles/2005/12/22/on_wiretapping_bush_isnt_listening_to_the_constitution/?page=2

"Just this past week there were public reports that a college student in Massachusetts had two government agents show up at his house because he had gone to the library and asked for the official Chinese version of Mao Tse-tung's Communist Manifesto. Following his professor's instructions to use original source material, this young man discovered that he, too, was on the government's watch list.
Think of the chilling effect on free speech and academic freedom when a government agent shows up at your home -- after you request a book from the library.
Incredibly, we are now in an era where reading a controversial book may be evidence of a link to terrorists.
Something is amiss here. Something doesn't make sense. We need a thorough and independent investigation of these activities.

The Congress and the American people deserve answers now.
Edward M. Kennedy is the senior US senator from Massachusetts"

LMFAO!!!!!

www.devilfinder.com Ships Radio Room Clocks

My old buddy retired out of the U.S.Navy.About thirty years ago,the Navy Reserve unit here in Jackson was clearing out some old things and they let him have an old clock like that and also a Ship Compass and an Anvil.Actually though,it might not be a Ship Radio Room Clock they let him have,the metal part of the clock is a brown color and it is a 24 hour Military time clock.The clock dates back to the 1940's or 1950's and still keeps excellent time.

Yes, they do look like pagans. And James Lloyd tells us that Santa = Satan (heh, heh, heh). But now Rick Wiles seems to be saying that any slight to old European winter solstice traditions is somehow an affront to Christianity itself. Well, I'm confused. If we can't get theological consistancy from some of our most beloved end-timers, who can we get it from?

Communist China recruiting U.S. IT grads

...this brain trust is being used by China both as a control on its own Internet revolution and as a potential resource for North Korea' cyberwar program.
...
Defense officials said privately that North Korea, with no great pool of computer whizzes from which to select, is relying on Chinese aid and advice to train some 600 qualified hackers in five years.

One Hong Kong-based specialist said China has a budget for hiring the best IT graduates from U.S. universities to monitor and control Internet news reporting, and useage within its own borders as well as for a national security resource.

"They've got the money, and they are spending it," he said.

Wal-Mart Ordered to Pay $172 Million by Jury

"What was compelling for the jury was that we put a lot of evidence before them of memos by Wal-Mart from seven years ago that concluded they had been breaking the law," said Jessica Grant, a lawyer for the plaintiffs. "Instead of taking steps to solve the problem, Wal-Mart concealed it."

Wal-Mart faces similar lawsuits in over 30 states, said Grant, whose firm is pressing two of the court challenges, one in Maryland and the other in Massachusetts, on behalf of 80,000 class-action plaintiffs.

One of the interesting tid-bits from Nixon's tapes, besides his
assertion that the "Warren Report was the biggest fraud ever
perpetuated on the American people," was this;
John Dean's musing to Richard Nixon as recorded on the White
House tapes in 1973: "If Teddy knew the bear trap he was walking into
at Chappaquiddick. . . ." (page 121, White House Tapes Paperback
Edition, published by New York Times)

Unlike, say, the phrase " stepping into a pile of shit," the words
"bear trap" suggest that there were other actors in that sorry
episode, which, given the fate of his brothers, seems entirely
possible.

no, its not..... it is, like a lot of other things, a symptom of a larger problem. :(

and here the mass media is, for the most part, a significant part of that problem. if they'd just report the facts and leave the opinions to those more qualified, well, it wouldn't probably have not gotten as far as it has.

This "mass hysteria" is one of the reasons why I no longer pay much attention to anything news wise unless its a natural disaster that will result in my being called up for comms duty.

One of the main functions of our intentionally disfunctional school
system is teaching citizens to be better news consumers. If the news
is strictly ratings driven it's feeding a beast.

The "best" single page I have found is at a Microwave magazine and it gives math that almost makes sense.

>http://www.mwrf.com/Articles/Print.cfm?ArticleID=10017>

This ought to reduce to a set of simple numbers that would allow one to

input outside (of the coax shield) signal levels in V/mtr, TI and see just
how much or how little RF will sneak inside through the braid and foil.

I have built a simple test jig on a 10' long 4"4 wodden post with a 6' noise
injection antenna that runs parallel to , and 1" from a coax under test. I
used wood and plastic golf tees to keep stray metal from effecting the test
results. I am using a RF antenna noise bridge through a emitter follower
buffer and a 16:1 step down to couple the buffer to the loop. I haven't had
time to do more the a quick and simple test and all I can say is it appears
to be working.

As time and weather permit I will post the results.
At this point I am convinced that the simplest solution to engress is to burry
the coax. Your copper pipe idea sounds good.

Of course tossing out the PC and moving to the woods in my proposes mud
hut still has a lot of promise. Noise engress only matters if you have
noise.

like tv transmissions and cable the tv rf power transmissions may
mostly close except those for sercurity. the shift is to cable and
satellite tv

with this in mind I would say the demise of rf sw stations will happen
but at a much slower rate

in the future, it may be in vogue to have a raw rf stations

only a few cents worth

all the best

.....
.....A
big advantage of short-wave radios is that the one can listen to controversial material without Big Brother (the New World Order control freaks) knowing about it as compared to the internet, OnStar, and other controlled media that leave a track. I would think that the trend is to shut down short-wave stations except for private ones that are able to generate operating funds.And even some of these are operated as black ops by government agencies. The amount of surveillance made possible by supercomuters, satellites.etc is frightening and I can't imagine that the big boys want such loose cannons as free short-wave radio stations screwing up their controlled universe.

Non controversial? Perhaps, but it is certainly a varied date.

Hindu New Year, Diwali, or sometimes spelled Divali, is celebrated late October or early November.

http://tinyurl.com/cl45j

The Chinese New year is celebrated on the first day of the First Moon of the lunar calendar. The corresponding date in the solar calendar varies from as early as January 21st to as late as February 19th.

http://www.c-c-c.org/chineseculture/festival/newyear/newyear.html

It would appear DxAss is actually a Venezuelan citizen who celebrates New Years ALL year long. A long overdue time for washing one's clothes, I should think.

==========
In my country, people usually wear yellow underwear on New Year's Day.

I read that Radio Tirana is back on the air, so I just tried to catch them on 6115 khz. There was definitely a carrier there, but that's all I heard and I normally have no trouble hearing them. Has anyone else heard them the last day or so?

The idea is good, but there may have been more reports if the test were
carried out on a Friday and Saturday night. More people stay up late on
the weekends.

Nothing on 6115, but there is a very strong German language broadcast on
6100 and the stereotypical Southern drawl US televangelist on 6090.

3620. Christmas Messages and Programs on the Radio

Newsgroup: rec.radio.shortwave
Date: 2005-12-25 13:11:58 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1135516318.880708.117720@g47g2000cwa.googlegroups.com>
Source record: 55730

For One and All,

Here are a few Christmas Messages and Programs on the Radio

* The Queen's Christmas Day speech will focus on the Natural Disasters
and Acts of Terrorism that have dominated 2005.
http://news.bbc.co.uk/2/hi/uk_news/4554342.stm
The Queen's Christmas message will be broadcast at 1500 GMT on 25
December.
http://en.wikipedia.org/wiki/Royal_Christmas_Message

* Pope Benedict XVI offered a Christmas prayer for peace in the Holy
Land on Sunday and made a special mention of children, including the
unborn, as he led his first midnight Mass in the splendor of St.
Peter's Basilica.
http://www.vaticanradio.com/
http://www.mia.com.mk/ang/glavnavest/lastvest.asp?vest=%5CRefresh1%5C101-2512.htm

* Bush Salutes U.S. Troops in Christmas Eve Message
In his broadcast, Bush urged Americans to look for ways to volunteer
their time and talents to those in need.
http://www.kansascity.com/mld/kansascity/news/13482353.htm
Bush Uses Weekly Radio Speech to Honor Fallen Troops, Recognize
Military's Burden on Christmas Eve
http://abcnews.go.com/Politics/wireStory?id=1439847

* NPR's 26th Annual New Year's Eve special will be hosted from New
Orleans' famous Tipitina's nightclub, marking the first live national
music broadcast from the city since Hurricane Katrina, and will feature
a number of local musical artists who have not performed in their
hometown since then.
http://eurweb.com/story.cfm?id=24029
The 12-hour special, offering jazz and blues from coast-to-coast, is
part of NPR's extensive holiday programming line-up, including such
specials as the long-running Hanukkah Lights, original stories about
the holiday; Christmas from the World Café, and A Car Talk Christmas
Carol, a somewhat different approach to the classic tale.

Wuz de nite befo Crimmus. And all ower da hood. ereybody wuz' sleepin dey wuz sleepin' good.

We hunged up our stockins An hoped like de' heck That old Santa Clause Be bingin our check

All o'de fambily Wuz layin in de bed`s While Ripple and Thunderbird Danced through dey heads.

I passed out inna flo Right nex to my maw When I heard sech a fuss I thunk:"it mus be de law !

I looked out thru de bars What covered my doe spectin de sheriff Wiff a warrant fo sho.

And what did I see I said "Lawd look at dat ! Ther wuz a huge watermellon Pulled by giant warf rats.

Now ober all de years Santa Clause he be white But looks liken us bros Gets a black Santa dis nite.

Faster dan a po'lees car My home boy he came. He whupped on dem warf rats an called dem by name.

On Leroy on Lonzo And on Willie Lee On Saphire,on Chenequa Dey wuz a site to see.

As he landed dat watermellon Out der in da skreet I knowed it wuz fo 'sho' Da damndest site I ebber did see

He didnt go down no chimbley He picked da lock on my doe An I sez to myself "Shit he done dis befoe".

He had his big bag Full of presents I xpect Wid air Jordans and fake gold To wear roun my neck.

But he left no good prezents Jus started stealin my shit Got my drugs , got my guns Even got my burglars kit.

Wit my stuff in de bag Out de window he flewed I woudda tried to catch him but he stole my knife too.

He jumped on dat watermellon An whipped out a switch He wuz gone in a seccon Dat son of a bitch

Nex year I be hopin Anutha Sanna we get Cuz dis here Sanna Clause Jus ain`t werf a shit.

3628. Great Circle Antenna Pointing Question

Newsgroup: rec.radio.shortwave
Date: 2005-12-25 15:59:56 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <BKKdnULuR91tXDPenZ2dnUVZ_tKdnZ2d@comcast.com>
Source record: 55738

Hello:

A bit confused over Great Circle directions.

I believe that if one is traveling from Boston to London via air along the great circle connecting these two cities, he would Constantly have to adjust his heading; e.g., one compass
heading the whole way won't do it.

Is this correct ?

So, now to my real question"

Let's say that there is an omni broadcast station in London, and that its broadcast goes out in all directions.

I believe radio waves follow great circles when considering a spherical globe.
True ?

Then, how would the chap in Boston, assuming he has an extremely directional antenna, point his antenna ?

Would it just be the final angle along the great circle when it crosses Boston ?

Looked, but surprisingly couldn't find any good links to any great circle direction programs on the web.
Lots that calculate distances, but couldn't locate any that show distances, etc., relative to my questions above.

Anyone happen to know of any ?

Much thanks,
Bob

Let me make this very clear to you. Your phrase *effin ass* is a
compound noun. A compound noun has many variations. Your particular
phrase has either the 'adjective-noun' form OR the 'verb-noun' form.

Either one may apply to your sickness, depending on whether or not you
are engaged in your perversion at the moment (verb) or just describing
what your backside is for (adjective)

http://www.edufind.com/english/grammar/NOUNS4.cfm

Many formerly sick people have returned to the heterosexual norm and
became employable, productive members of society. I implore you. Get help.

mike

>amen, Amen. and AMEN ! ~ RHF
>CHAPTER VIII - OF THE NEW TESTAMENT.
THUS much for the Bible; I now go on to the book called the New
Testament. The new Testament! that is, the 'new' Will, as if there
could be two wills of the Creator.

Had it been the object or the intention of Jesus Christ to establish a
new religion, he would undoubtedly have written the system himself, or
procured it to be written in his life time. But there is no
publication extant authenticated with his name. All the books called
the New Testament were written after his death. He was a Jew by birth
and by profession; and he was the son of God in like manner that every
other person is; for the Creator is the Father of All.

The first four books, called Matthew, Mark, Luke, and John, do not
give a history of the life of Jesus Christ, but only detached
anecdotes of him. It appears from these books, that the whole time of
his being a preacher was not more than eighteen months; and it was
only during this short time that those men became acquainted with him.
They make mention of him at the age of twelve years, sitting, they
say, among the Jewish doctors, asking and answering them questions. As
this was several years before their acquaintance with him began, it is
most probable they had this anecdote from his parents. From this time
there is no account of him for about sixteen years. Where he lived, or
how he employed himself during this interval, is not known. Most
probably he was working at his father's trade, which was that of a
carpenter. It does not appear that he had any school education, and
the probability is, that he could not write, for his parents were
extremely poor, as appears from their not being able to pay for a bed
when he was born. [NOTE: One of the few errors traceable to Paine's
not having a Bible at hand while writing Part I. There is no
indication that the family was poor, but the reverse may in fact be

inferred.--Editer.]

It is somewhat curious that the three persons whose names are the most universally recorded were of very obscure parentage. Moses was a foundling; Jesus Christ was born in a stable; and Mahomet was a mule driver. The first and the last of these men were founders of different systems of religion; but Jesus Christ founded no new system. He called men to the practice of moral virtues, and the belief of one God. The great trait in his character is philanthropy.

The manner in which he was apprehended shows that he was not much known, at that time; and it shows also that the meetings he then held with his followers were in secret; and that he had given over or suspended preaching publicly. Judas could no otherways betray him than by giving information where he was, and pointing him out to the officers that went to arrest him; and the reason for employing and paying Judas to do this could arise only from the causes already mentioned, that of his not being much known, and living concealed.

The idea of his concealment, not only agrees very ill with his reputed divinity, but associates with it something of pusillanimity; and his being betrayed, or in other words, his being apprehended, on the information of one of his followers, shows that he did not intend to be apprehended, and consequently that he did not intend to be crucified.

The Christian mythologists tell us that Christ died for the sins of the world, and that he came on Purpose to die. Would it not then have been the same if he had died of a fever or of the small pox, of old age, or of anything else?

The declaratory sentence which, they say, was passed upon Adam, in case he ate of the apple, was not, that thou shalt surely be crucified, but, thou shale surely die. The sentence was death, and not the manner of dying. Crucifixion, therefore, or any other particular manner of dying, made no part of the sentence that Adam was to suffer, and consequently, even upon their own tactic, it could make no part of the sentence that Christ was to suffer in the room of Adam. A fever would have done as well as a cross, if there was any occasion for either.

This sentence of death, which, they tell us, was thus passed upon Adam, must either have meant dying naturally, that is, ceasing to live, or have meant what these mythologists call damnation; and consequently, the act of dying on the part of Jesus Christ, must, according to their system, apply as a prevention to one or other of these two things happening to Adam and to us.

That it does not prevent our dying is evident, because we all die; and if their accounts of longevity be true, men die faster since the crucifixion than before: and with respect to the second explanation, (including with it the natural death of Jesus Christ as a substitute

for the eternal death or damnation of all mankind,) it is impertinently representing the Creator as coming off, or revoking the sentence, by a pun or a quibble upon the word death. That manufacturer of, quibbles, St. Paul, if he wrote the books that bear his name, has helped this quibble on by making another quibble upon the word Adam. He makes there to be two Adams; the one who sins in fact, and suffers by proxy; the other who sins by proxy, and suffers in fact. A religion thus interlarded with quibble, subterfuge, and pun, has a tendency to instruct its professors in the practice of these arts. They acquire the habit without being aware of the cause.

If Jesus Christ was the being which those mythologists tell us he was, and that he came into this world to suffer, which is a word they sometimes use instead of 'to die,' the only real suffering he could have endured would have been 'to live.' His existence here was a state of exilement or transportation from heaven, and the way back to his original country was to die.--In fine, everything in this strange system is the reverse of what it pretends to be. It is the reverse of truth, and I become so tired of examining into its inconsistencies and absurdities, that I hasten to the conclusion of it, in order to proceed to something better.

How much, or what parts of the books called the New Testament, were written by the persons whose names they bear, is what we can know nothing of, neither are we certain in what language they were originally written. The matters they now contain may be classed under two heads: anecdote, and epistolary correspondence.

The four books already mentioned, Matthew, Mark, Luke, and John, are altogether anecdotal. They relate events after they had taken place. They tell what Jesus Christ did and said, and what others did and said to him; and in several instances they relate the same event differently. Revelation is necessarily out of the question with respect to those books; not only because of the disagreement of the writers, but because revelation cannot be applied to the relating of facts by the persons who saw them done, nor to the relating or recording of any discourse or conversation by those who heard it. The book called the Acts of the Apostles (an anonymous work) belongs also to the anecdotal part.

All the other parts of the New Testament, except the book of enigmas, called the Revelations, are a collection of letters under the name of epistles; and the forgery of letters has been such a common practice in the world, that the probability is at least equal, whether they are genuine or forged. One thing, however, is much less equivocal, which is, that out of the matters contained in those books, together with the assistance of some old stories, the church has set up a system of religion very contradictory to the character of the person whose name it bears. It has set up a religion of pomp and of revenue in pretended imitation of a person whose life was humility and poverty.

The invention of a purgatory, and of the releasing of souls therefrom, by prayers, bought of the church with money; the selling of pardons, dispensations, and indulgences, are revenue laws, without bearing that name or carrying that appearance. But the case nevertheless is, that those things derive their origin from the proxysm of the crucifixion, and the theory deduced therefrom, which was, that one person could stand in the place of another, and could perform meritorious services for him. The probability, therefore, is, that the whole theory or doctrine of what is called the redemption (which is said to have been accomplished by the act of one person in the room of another) was originally fabricated on purpose to bring forward and build all those secondary and pecuniary redemptions upon; and that the passages in the books upon which the idea of theory of redemption is built, have been manufactured and fabricated for that purpose. Why are we to give this church credit, when she tells us that those books are genuine in every part, any more than we give her credit for everything else she has told us; or for the miracles she says she has performed? That she could fabricate writings is certain, because she could write; and the composition of the writings in question, is of that kind that anybody might do it; and that she did fabricate them is not more inconsistent with probability, than that she should tell us, as she has done, that she could and did work miracles.

Since, then, no external evidence can, at this long distance of time, be produced to prove whether the church fabricated the doctrine called redemption or not, (for such evidence, whether for or against, would be subject to the same suspicion of being fabricated,) the case can only be referred to the internal evidence which the thing carries of itself; and this affords a very strong presumption of its being a fabrication. For the internal evidence is, that the theory or doctrine of redemption has for its basis an idea of pecuniary justice, and not that of moral justice.

If I owe a person money, and cannot pay him, and he threatens to put me in prison, another person can take the debt upon himself, and pay it for me. But if I have committed a crime, every circumstance of the case is changed. Moral justice cannot take the innocent for the guilty even if the innocent would offer itself. To suppose justice to do this, is to destroy the principle of its existence, which is the thingitself. It is then no longer justice. It is indiscriminate revenge.

This single reflection will show that the doctrine of redemption is founded on a mere pecuniary idea corresponding to that of a debt which another person might pay; and as this pecuniary idea corresponds again with the system of second redemptions, obtained through the means of money given to the church for pardons, the probability is that the same persons fabricated both the one and the other of those theories; and that, in truth, there is no such thing as redemption; that it is fabulous; and that man stands in the same relative condition with his Maker he ever did stand, since man existed; and that it is his greatest consolation to think so.

Let him believe this, and he will live more consistently and morally, than by any other system. It is by his being taught to contemplate himself as an out-law, as an out-cast, as a beggar, as a mumper, as one thrown as it were on a dunghill, at an immense distance from his Creator, and who must make his approaches by creeping, and cringing to intermediate beings, that he conceives either a contemptuous disregard for everything under the name of religion, or becomes indifferent, or turns what he calls devout. In the latter case, he consumes his life in grief, or the affectation of it. His prayers are reproaches. His humility is ingratitude. He calls himself a worm, and the fertile earth a dunghill; and all the blessings of life by the thankless name of vanities. He despises the choicest gift of God to man, the GIFT OF REASON; and having endeavoured to force upon himself the belief of a system against which reason revolts, he ungratefully calls it human reason, as if man could give reason to himself.

Yet, with all this strange appearance of humility, and this contempt for human reason, he ventures into the boldest presumptions. He finds fault with everything. His selfishness is never satisfied; his ingratitude is never at an end. He takes on himself to direct the Almighty what to do, even in the govemment of the universe. He prays dictatorially. When it is sunshine, he prays for rain, and when it is rain, he prays for sunshine. He follows the same idea in everything that he prays for; for what is the amount of all his prayers, but an attempt to make the Almighty change his mind, and act otherwise than he does? It is as if he were to say--thou knowest not so well as I.

-Thomas Paine 1795

You should talk about help, 'tard boy! After all, you're a damn dumbass Canuck.

Now run along and tote like a good little boy.

LMFAO at the deranged mentally ill stem yet again!

You are just like the proverbial alcoholic uncle, in a state of perpetual denial...well..that and sounding like a bloody broken record, unable to stop yourself from repeating the same stupid lines over and over again.

I'm amazed that you don't seem to realize what a deep rut you've dug for yourself. It's worthy of a Twilight Zone script.

"The Parrot Whisperer' is a good working title, implying exactly what a limited vocabulary you are capable of imparting.

With that I leave this small thread. You may now continue your colonic criminality and infernal intestinal invasiveness.

That's pretty mean to post on Christmas day or ANY day. There are poor white trash like yourself too. Why not a poem about yourself too??

You can forget about going to heaven for sure. What a low life POS you must be.
I wish you the worst coming New Year. Next time something horrible happens to you or your loved ones, you can look back on this post and you'll know why.

Have a terrible lonely day and life.

3644. Eton Porsche Design P7131 Questions

Newsgroup: rec.radio.shortwave
Date: 2005-12-25 16:32:28 UTC
From: Bill Kraski <Bill.Kraski.NoSpam@verizon.invalid>
Message-ID: <wQzrf.18520$mz2.17060@trnddc08>
Source record: 55654

I got one for Christmas. And I've given most of the functions a pretty good workout -- except the shortwave. The AM/FM/XM reception is very good. But all the Eton reviews I've seen are for the E1. So, I'm not sure how the P7131 stacks up for shortwave reception. There's an external antenna jack on the back, but the manual doesn't say whether that's for AM, FM, shortwave or some combination of those. Does anyone have any experience with this unit for shortwave? And does anyone have more info on the external antenna jack?

Some basics:

http://www.ac6v.com/greatcircle.htm

A spread sheet program that should be easily adapted to other forms:

http://home.inu.net/davidstua/Lat_Long.htm

A java script calculator:

http://www.airways.com/java/coordcalc.html

A great circle distance calculator in Visual basic. I don't know if it does angles of direction, though.

http://snipurl.com/l20q

Many different calculators, including Great Circle stuff:

http://www.martindalecenter.com/Calculators1B_7_Nav.html

From the above site:

http://williams.best.vwh.net/gccalc.htm

I've often thought you yourself have been NeoConfused about what the term 'humanity' means.

How you can be so happy celebrating Christianity on one hand and the bombing by b-52s of what is considered the birthplace of humanity by the Euphrates on the other is beyond me.

Every single idea and concept placed before us by Jesus Christ has been twisted, broken or manipulated to fit the agenda of the murderers and thieves now occupying the White House.

You have to decide if you follow God or mammon. Right now you want to sit on the fence. It doesn't work.

A 'Christian of Convenience' is just a pile of hypocritical crap.

Exactly. That's why I'm trying to turn him from his deviate ways. Think of me as the shovel trying to clean up after he's 'laughed his effin(1) ass off' for the millionth time this year.It's hard for him to be continent without the required sphincter muscles.

well, at least it was only my nose. Ask dxAss about his involuntary, painful and rather jagged circumcision caused by a sub zero degree pane of window glass. You will have noticed how silent he's been on that topic since it happened last year.

> Or M II _ Are the recurring dreams of the Silence-of-the-Baby-Seals
> once again bashing away at the edge of your human conscience ?

The only thing bashing away at my conscience are the fools in Hollywood who buy the skins of these slaughtered animals. The empty headed bimbos wearing the furs make me ashamed to part of the human race.

3654. Lightning Arrester Brand: Which ?

Newsgroup: rec.radio.shortwave
Date: 2005-12-25 17:48:14 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <3YGdnQyt0enORjPeRVn-qw@comcast.com>

Hello:

Anyone have any strong opinions regarding PolyPhaser, ICE, and Alpha Delta Lightning Arresters ?

Would be for a receive only antenna.

Do I want the dc blocked variety, or doesn't it matter for receive only (0.5 to 30 MHz) ?

Thanks,
Bob

While not overly popular, the mini-disc recorder/player (Sony) is one
fanatastic gadget. It would be in my top 50 for sure.

I was sitting here thinking that it was actually pretty lame!

It might be the Voice of Syncom as there were references to Arecibo Alpha 1
calling Syncom at the beginning.

Source record: 55675

Get a globe and a piece of string, stretch string from point A to
point B, and there you are. Measure the azimuth on your end.

It's the system of latitude and longitude that's screwy, not the
route that radio waves take.

You want a stereographic projection map centered on your city.
Then all great circles through your city are straight lines,
and you just measure their azimuth at the big compass rose on
the outer edge of the map.

I don't know if they're made any longer. Hams used to buy them.

It's unable to represent a small circle on the opposite side of the
world from you. (Not surprising, it would have all bearings
simultaneously.)

Radio waves follow ``stationary'' paths, which means paths that have
the same distance as nearby paths, to first order. The shortest
and the longest path are such paths.

On other paths, nearby paths have differing phases and add up to
zero instead of providing a hefty maximum.

Universal contacted me and offered to exchange the unit for one of more reasonable vintage, an offer I graciously accepted.

Assuming all goes well, I'm very appreciative of Universal's offer. I did send a note to Yaesu Vertex asking about modifications to the radio subsequent to mine's January 2003 manufacture date and never received a response. It'll be nice to not have to worry about it one way or another.

They list the Apple Newton at #28 and indicate that it "paved the way for smaller, simpler devices like the PalmPilot", but in fact like many of the things that are hyped as being invented by Apple, the Newton was once again a rehash of someone else's product.

The Casio Databank PF8000 predated the Newton by nearly a decade, I got mine in about 1985, had handwriting recognition remarkably similar to the "graffiti" that showed up in the PalmPilot much much later and a whopping 4K of memory with the extra 2K expansion pack.

For those who never saw the PF8000, it is/was about 5" wide, 3" high and 1/4" thick with a 2" square or so touch pad area at the right which functioned both for handwritten text input without the need for a stylus, and also doubled as a calculator touch pad. The Databank watches came quite a bit later.

For those who think the somewhat ill fated Apple Newton was a technology leader way ahead of it's time, Casio beat Apple both by a decade and with better functionality, usability and ergonomics.

I would think it's the very longest path possible. Every path between it and the short path will vary in length between these two extremes.

The sum of the distances of the short path and long path will equal the circumference of the globe.

OK. Worth a try. I have picked up a few things with the built in telescoping antenna, but not a lot. It doesn't seem to cover the full sw spectrum like the E1 does or have all the E1 bells & whistles.

> Dunno whether it's single or double reduction...

I don't have a clue on that one, either.

> - Looks cool !

It is! I have a TV tuner & mp3/ogg player on my pc. The auxiliary input/output jacks allow me to hook the pc into it, then the p7131 into my stereo. The connection acts as a passthrough, if I have it turned off. But I'm finding that leaving it on at low volume helps fill the sound space. Very nice addition to my setup. And it's only about 5"x5.5" on the front & 7.5" deep. So, it doesn't take up too much real estate on my desk.

Found a link that shows the PF-8000

http://www.voidware.com/calcs/pf8000.htm
http://www.the-gadgeteer.com/article/read_about_featured_gadgeteer_evan_koblentz
http://pocketcalculatorshow.com/calculator/index5.html

One of those sites dates the PF-8000 to 1980 putting far far ahead of
the Newton.

I've had nothing but good experiences with Universal. This includes buying new and used equipment, as well as trading stuff in. In fact, I recently traveled to Universal to trade in an R8B and NRD-545 for a new Ten Tec RX-340, and was completely satisfied with the service. Apparently Universal does not process orders made via their website in a timely manner, as opposed to phone orders that seem to get processed quickly.

What annoys me is the crappy service I sometimes get when visiting Amateur Electronic Supply in Wickliffe, OH. The salesmen are always on the phone taking orders and walk-in customers are frequently ignored.

I'd have to take issue with the choice of Microsoft Intellimouse
Explorer (1999). The first optical mice were available at least 15
years (?) before, albeit with a metal pad and hefty price tag. I'm
still using a serial Mouse Systems mouse of that era. I also recall
paying about AU$40 for a Taiwanese serial optical mouse in 1990. I
can't understand why PC World believes that MS's product is "the first
mainstream optical mouse".

I'd also have given an award to the Casio and Sharp organisers of the
early 90's.

Polyphaser is the best in the industry, bar none. I've used them and
have nothing but high praise for them.

ICE has a pretty good reputation as well.

I don't know if A-D still makes it, but at one time they had a design
out there that would actually INCREASE the amount of damage a strike
or induced EMF from a nearby strike would cause -- it had a gas tube
tied from center-conductor to ground, but no connection (gas tube or
otherwise) from shield to ground. Basically a "please, kill my
equipment" device.

I know A-D sells other designs, but since they sold that one at all,
I'm wary of them.

The designs I like are all DC blocked gas tubes, but you don't have to
go that way. I know Polyphaser sells some gas tube/semiconductor
versions that will do well on broadband receive as well.

I've used one of those Alpha Delta Zapp Trappers that came with an Eavesdropper antenna and also have used the Alpha Delta Delta Four switch w/ "Arc plug" cartridge. Okay so far in using either of these.

If there's an advantage gained by going with the Polyphaser product as opposed to the Alpha Delta lightning protection mentioned above, could any knowledgeable person please let us know?

thanks,

junius

How about all the people who have been killed and crippled for life thanks to Bush's web of lies? How about the 225 thousand million so far blown on the invasion/occupation?

Bush belongs in prison for the rest of his days. That would be just.

==

"Never in human history have such genocide and cruelty been witnessed. Such a genocide was never seen in the time of the pharaohs nor of Hitler nor of Mussolini." - Mehmet Elkatmi, head of Turkish parliament's human rights on Bush's invasion of Iraq

==========

WAR PICTURES

WARNING - the pictures at the following sites are of things that most of the Iraqi people and the US soldier boys have seen thanks to the LIES of the Bush regime. They are NOT appropriate for children and people with heart problems.

The pictures alone are enough to make most people sick without the accompanying unbelievably grotesque stench of rotting human flesh - which is something the people in Iraq (and most of the soldiers there) are familiar with too, thanks to the lies of US government officials in Washington & the insane greed of those who they live to serve.

Robert Fisk:
http://snipurl.com/h6tm

Mind Prod:
http://snipurl.com/h6tp

WARNING - the pictures are NOT appropriate for children and people with heart problems. They document some of the crimes against humanity, that dubya demanded, and that the mainstream newsmedia kept off the tv screens in their efforts to sanitize the vulgar and barbaric invasion

and get everyone behind the so called "commander in chief", the acting president - who keeps his lips locked on the butts of US billionaires.

==========

Do the right thing:
http://VoteToImpeach.org

Articles of Impeachment &
Notes for the Consideration of Impeachment
prepared by by Ramsey Clark
former U.S. Attorney General

http://VoteToImpeach.org

To find the truth about what's going on in the world, one has to find non-mainstream sources outside the USA. Here are a
few news sources that are for the people - that are NOT controlled by the insanely greedy warprofiteering, bastards who control the top American politicians:

http://AlterNet.org
http://CommonDreams.org
http://DemocracyNow.org
http://www.independent.co.uk/
http://www.freepress.org
http://ThirdcoastActivist.org
http://www.informationclearinghouse.info

==========

please share this information with others -

The truth will set our asses free (from highly deceptive warmongering bastards and their wars)

More lies & deception from Bush and the "establishment" will keep wars going forever - causing tons of needless, extreme misery - all so a few bastards can have far more money and power than they deserve.

Definitely sounds like I need to think about an external antenna, then.
And, since I've picked up a few stations with the radio right above the pc,
I guess they've done a pretty good job with the sw section.

Thanks.

That was certainly a problem with the ICF-2001D/2010's synch detector,
but I don't think it was a problem with any of the follow on models.

3712. Harry E. Landsberg, Jr., CIA Maltese Falcon: Kennedy assassination, IRAN/CONTRA, UFO's

Newsgroup: rec.radio.shortwave
Date: 2005-12-26 03:35:11 UTC
From: Laura <lhann10243@earthlink.net>
Message-ID: <1135568111.226969.134430@f14g2000cwb.googlegroups.com>
Source record: 55772

Harry E. Landsberg, Jr., CIA Maltese Falcon: Kennedy assassination,
IRAN/CONTRA, UFO's

My late father, Harry E. Landsberg, Jr. is apparently one of the 35 CIA
Officers memorialized on the north wall of the Original Headquarters
Building lobby whose "names ... must remain secret, even in death."

Please see:

http://www.angelfire.com/journal2/landsbergphotos2/maltese_falcon_search_terms_maltese_falcon_cia_dot_gov.jpg

taking note of the search terms "maltese+falcon."

Then:

http://www.angelfire.com/journal2/landsbergphotos2/maltese_falcon_cia_dot_gov_memorial_wall.jpg

and

http://www.angelfire.com/journal2/landsbergphotos2/maltese_falcon_cia_dot_gov_memorial_wall_2.jpg

---

I was discredited as being mentally ill in 1981 and again in 1985. As
a result I was motivated to research family matters.

In 2004 I learned that my husband, Richard Hanning, Jr., was a
Marine/covert operator assigned to me. We met in 1985 and I knew I was
a target when I met him. I just didn't know I was his target.

We are divorced. My life has been in danger and I have been revealing
information about my family and their associates as a result.

Please see:

"Harry E. Landsberg, Jr. -- resemblance to man in photo with Specter"
http://home.earthlink.net/~lhann10243/index.html

and

"IRAN/CONTRA: Fleming O. Landsberg, Fleming Landsberg, U.S. Ordinance
[sic] Inc."
http://home.earthlink.net/~lhann10243/id85.html

and

"Landsbergs and Maddens -- Mirror" (UFO's)
http://www.angelfire.com/journal2/landsbergphotos/Landsbergs_and_Maddens_mirror.html

---

I am a survivor of satanic ritual abuse and mind control.

Please see:

"The Love Game"
http://home.earthlink.net/~sammark4/id2.html

and

"Scars and other signs of mind control"
http://home.earthlink.net/~sammark4/id5.html

My legal mother, Donna Jean Volkmer Landsberg, worked as secretary to
the Undersecretary of the Navy in the 1940's, likely James Forrestal.

He died under mysterious circumstances. Please see:

"The Death of James Forrestal" by Richard M. Dolan
http://keyholepublishing.com/Death%20of%20James%20Forrestal.htm

---

I had a vision of Donna as a three-headed bird (black heads.)

I was searching for photos of Vanessa Redgrave and found this photo
which was similar to the bird in my vision:

http://www.angelfire.com/journal2/landsbergphotos2/donnas_bird_head_more_like_this.jpg

Then searching on "Maltese Falcon" I came across "The Virtual Tour of
the CIA:"

http://images.google.com/imgres?imgurl=http://www.cia.gov/cia/information/
tour/83stars_lg.jpg&imgrefurl=http://www.cia.gov/cia/information/tour/
stars.html&h=465&w=600&sz=184&tbnid=fQ8WESE-YHkpWM:&tbnh=103&tbnw
=133&hl=en&start=130&prev=/images%3Fq%3D%2522maltese%2Bfalcon
%2522%26start%3D120%26svnum%3D10%26hl%3Den%26lr%3D%26sa%3DN

or

http://www.cia.gov/cia/information/tour/stars.html

There is no mention of the words "Maltese Falcon" on the page.

There was a Divine Intervention in late 2003 and I have been protected
as I have been enduring harassment in the astral plane.

I had one of those optical mice with the metal pad, it worked well at the time but the modern optical mice are infinitely better. They provide the advantages of optical along with those of mechanical mice for the best of both worlds. I was never fond of the Intellimouse Explorer ergonomic design, in fact I didn't like it at all, but the standard Intellimouse optical that was offered for a short time, as well as the Logitech models are quite good.

I have used NIMH rechargeables in the SW7600G for years with no
problem. The early AA's were rated at 1800 mah but the newer ones are
rated at 2300 mah and last much longer. The Energizer NIMH 2300 is
well worth seekig out.

> I'd heard that due to slightly lower voltage, AA rechargeable may not
> be suited for Sony's favorite portable. True?

I always use NIMH's on it even though I have a couple Sony AC adapters, just so I can always pick up the radio and carry it with me to another room.

It's wise to always have another set of 4 AA's charged and ready to go, however. So you need 8 not 4.

The synch detector howls on weak signals whether you use the AC adapter or not ; on the other hand it's a cheap radio.

You do get better reception with the ground that the AC adapter gives, but that's not the batteries' fault ; if some weak SW situation is what you're dealing with. But then you could use a more expensive radio too.

3732. Re: Great Circle Antenna Pointing Question

Newsgroup: rec.radio.shortwave
Date: 2005-12-26 09:12:29 UTC
From: nm5k@wt.net
Message-ID: <1135588349.547158.305000@f14g2000cwb.googlegroups.com>
Source record: 55792

Hello:

A bit confused over Great Circle directions.

I believe that if one is traveling from Boston to London via air along
the
great circle connecting these two cities, he would Constantly have to
adjust
his heading; e.g., one compass
heading the whole way won't do it.

>Is this correct ?

Yep.. If you left Boston with the autopilot on a direct
heading to London, it would constantly adjust the heading
as you fly. The heading would slowly increase as you
fly east. You might leave Boston heading appx 070,
but be about 110 or so by the time you got to London.
You'll go from heading northeast, to heading southeast
after you get to the highest lattitude near the pole.

So, now to my real question"

Let's say that there is an omni broadcast station in London, and that
its
broadcast goes out in all directions.

I believe radio waves follow great circles when considering a spherical
globe.
>True ?

yep.

Then, how would the chap in Boston, assuming he has an extremely
directional
>antenna, point his antenna ?

About 69-70 degrees or so.

Would it just be the final angle along the great circle when it crosses
>Boston ?

I suppose. Would be the same as laying a string across a globe
from London to Boston. The string would pass near Greenland, etc.

Looked, but surprisingly couldn't find any good links to any great
circle
direction programs on the web.

Lots that calculate distances, but couldn't locate any that show
distances,
etc., relative to my questions above.

Anyone happen to know of any ?

Someone showed a few links. If you want a map, the ARRL map
is laid out so you can get beam headings. Also should be beam
heading calculator programs out there somewhere. . I can use my
flight simulator and do that using the GPS... :/ Sitting at Logan
in Boston in my trusty Lear 31a, the heading to London Heathrow
is 69 degrees according to the GPS. 2827 nautical miles...

I was going to say much the same thing. It is the height of naivete to believe that within a religion of more than 1.5 billion followers, that there are not more than enough fringe militants to handle what's going on in Iraq and Afghanistan, and still have plenty left over to mount another attack on the US. I offer as proof of this that there HAVE been attacks on Bali, London, Lebanon, etc., all the while the wars in Iraq and Aghanistan have been underway. It does NOT follow that, as the administration advances, that just because we are fighting (some of) the jihadists 'over there' that we will not also have to fight them at home.

Let's do some hypothetical math. There are ~1.5 billion Muslims. If only .1% of those are militant jihadists, that means that there would be 1.5 million militant jihadists. That would be a very formidable and widespread enemy. And, they are committed, unafraid of death, and very, very patient. They will wait till the occasion presents itself and strike at their leisure, as in the example of the World Trade Centers. I can't say if .1% is a conservative or liberal estimate.. but even a decimal point one way or the other leaves a lot of people to deal with.

The first in dash CD player should be on the list.

Also the first radar detector.

I'd nominate the hp 95LX as the first pocket computer, even before the Newton.

I'd also put the Timex Ironman on the list. This little simple multifunction watch is the best selling "computer" ever produced. I own three including the one I'm wearing now which is 20 years old and predates "Indiglo."

50 years is a long time. How about the Bullova Accutron "tuning fork" watch.

No GPS? Surely I'd put the Garmin eTrex series on the list, or the Gecko.

Bicycle computers.

Leatherman multi-tools.

That list is too far weighted towards audio and not broad enough in scope.

BAD,

A 'potential' Army of 1.5 Million Militant Jihadists without Uniforms
ready to Initiate Large Scale Mass Murder upon Un-Armed American
Civilians and Destroy entire US Cities. The Islam-O-Fascist know
that they are "At War" with the USA, Western Civilization and any
thing they consider an Infidel within or without the Islamic Faith.

The US Congress is Out-to-Lunch and still is Asleep-at-the-Wheel
since by their Actions (In-Action) : Congress Does Not Know -
That We Are "At War" with the Un-Lawful-Combatants of the
Islam-O-Fascist.

This is an A Symmetrical Terrorist War and the War-on-Terror
can not be fought with Gentlemen's Rules - 'if' we hope to win.

HOW MANY MORE :

* Terrorist Attacks Will Happen In America ?

* Innocent American Civilians Must Die ?

* US Cities Will Be Destroyed ?

BEFORE - The US Congress puts the USA on a War Footing ?

The US Congress has Failed the American People by Their
Lack of Decisive Action to Make the War-on-Terror a Prime
Concern of the American People.

so say i - my opinions stated as facts ~ RHF

How Stands the Empire?
by Patrick J. Buchanan, December 26, 2005

How long ago was it that you last heard some pundit blather on about America being "the greatest empire since Rome"?

Quite a while, I imagine. For if the Iraqi insurgency has done nothing else, it has induced a sense of humility, and of the limits of American power.

Surely, all Americans hope the Iraqi elections will usher in a coalition that will let us depart. But it is time we stood back and took a hard look at what this war tells us, not only about our ability, but about the
wisdom of trying to remake the world in our own image.

Is this generation of Americans really up to the task? Is it really willing to pay indefinitely in blood and treasure to realize the ambitious agenda George W. Bush has set out? Consider:

Though our 2,150 war dead are not 4 percent of the men we lost in Vietnam, our home front has buckled. Half the nation wants out. Is this how a mighty empire reacts to a little adversity?

Today, we field armed forces one-tenth the size of U.S. forces in 1945, and not half as large as the forces commanded by Ike and JFK. Yet, the very suggestion of a return to the draft, which we all readily accepted in the 1950s, causes a firestorm of indignation and protest.

Apparently, few of our future leaders wish to risk their lives in the "global democratic revolution."

Nor have the rest of us been called on to sacrifice. Today, we spend 4 percent of our GDP on the military. In Ike's day, it was 9 percent; in Reagan's, 6 percent. But any proposal to raise taxes to expand U.S. armed
forces to enforce the Bush Doctrine against Iran or North Korea would have Republican supply-siders digging the cobblestones out of the streets
of Georgetown.

When it comes to empire, we are ï¿½ in a phrase Bush used to hear often growing up in West Texas ï¿½ "all hat and no cattle."

And whether we invaded to liberate Iraq from a brutal tyrant, or to strip
a dangerous regime of WMD, or to establish democracy, does the world

appreciate it? Does the world really want America to democratize mankind?

A new Zogby poll of 3,900 people in six once-friendly Arab nations finds that, when asked to name the leader they detest most, 45 percent named Ariel Sharon, but Bush has moved into second at 30 percent. Tony Blair was a distant third at 3 percent. No one else was close.

Only 6 percent agreed with al-Qaeda's goal of a caliphate ruling the Islamic world, and only 7 percent approved of its terrorism ï¿½ but fully 36 percent admired how al-Qaeda "confronts the U.S."

How admired is President Bush? When he urged the Iranians to go to the polls and repudiate the mullahs, they responded by choosing as president Mahmoud Ahmadinejad, who makes Hashemi Rafsanjani look like Ramsey Clark.
When Condi Rice stiffed the leader of the Muslim Brotherhood on a visit to Cairo, the Brotherhood soared in Egyptian eyes and swept to victory in
60 percent of the parliamentary races it contested.

Everywhere today, nationalists burnish their credentials by dissing us. In Canada, Prime Minister Paul Martin seeks to save a scandal-ridden regime by pandering to Canadians' dislike of the United States. Hugo Chavez made himself the toast of South America by flipping off Bush at the Argentine summit. Evo Morales just swept to victory in Bolivia by promising to defy the Americans.

When Bush went to Seoul, he was informed that South Korea is pulling out of Iraq. The U.S. ambassador, who denounced the North as a criminal regime, was told to shut up. East Asia just held its first summit ï¿½ to which the United States was not invited. The Uzbeks have just told us: Close your airbase, and get out.

Because of charges that we used secret prisons in Europe to interrogate jihadists and EU airports to transfer them there, the United States has never been less admired in NATO Europe, nor its president more despised.

Is it not thus apparent the world does not really want an American empire, or American hegemony, or Bush's "democratic revolution"? Is it not equally apparent that we Americans, unwilling to conscript our young or further tax ourselves, cannot sustain a global policy that commits us to defending nations all over this world, most of which do not even like us?

However Iraq ends, the era that began with the fall of the Berlin Wall has reached its close. That place in the sun the Greatest Generation won for us, and the Cold War generation kept for us, the baby boomer generation appears to have lost. And perhaps forever.

America needs a new vision. America needs a new foreign policy.

America needs a new president.

COPYRIGHT CREATORS SYNDICATE, INC.

"Most of the time I find myself in opposition to what ol' Pat has to say when he's drawing his conclusions. Especially when he's pundit-ing on some TV "news" show. But what I do like, especially in his writing, is that he does not suger coat the facts. That he's in opposition to a lot of what he neo-cons have had to say these last few years may be due to his being largely ignored by them, so I can appreciate when his ire is directed at their folly. It's funny how I, as a Progressive-Libertarian, ex-republican, used to think that Pat was as extreme right as one could get without putting on a Nazi uniform. Bush and his cronies sure proved me wrong.
I agree that America needs new vision and a new foreign policy. I can see
a mix of both true "conservative" and true "liberal" ideas. The "all or nothing" approach of the extremes on world issues has gotten us into the mess we're in now. We need to change or we're going to go the way of the third world in time. The Roman Empire ended up being overrun and defeated by uneducated barbarians at whom the Romans had looked down their noses with contempt. I can see the same happening to the US".

I disagree. Almost twenty years before (1974) that they had the HP-65.
It even had a magnetic card writer/reader for saving data or programs.

==========
HP introduces the first minicomputer to be based on 4K dynamic random
access memory chips (DRAM) instead of magnetic cores.

The world's first programmable pocket calculator, the HP-65, is
introduced at $795. Its programmability will later lead some to call it
the world's first handheld computer.

http://www.hp.com/hpinfo/abouthp/histnfacts/timeline/hist_70s.html
==========

I don't like the direction the company has taken. My experiences with
some of their printers have soured me on the 'new' HP. I loved their
products and philosophy until the end of the HP 41 era. They've turned
into just another mass marketer, with all the cheap plastic trappings
that accompany that mindset. .

Wait just a minute Canada...

What the B.C. Liberal Party is doing under the leadership of Gordon Campell, makes any reasonable person wonder why you are dissin good old G. Dubya for?

Canadians should spend a bit more time asking why, people with disabilities are dying in such record numbers, in British Columbia today?

Sure people are dying all over this crazy world, but no one can call themselves respectable, civilized or even humane, when they put their disabled and mentally ill citizens out in the cold streets to die in the middle of a Canadian winter!

Get off your high-horse Canada, before you fall and become your own worse nightmare....a homeless disabled canadian, a second class citizen in the great 'white' north.

Regards to all on Boxing Day!

It's too late, "Goober Nation" has already taken over. The Evangelical ignorant, uneducated, Hickory goobers are in charge. Don't appeal to reason because it requires brain; don't appeal to conscience, they never had it (I don't have to remind you of their history). This country had a chance to redeem itself on Nov. 2, 2004 and it did not; no, we're now witnessing the rise of the Beast among us (just as you said, the Roman Empire was overrun by the barbarians).

Happy Holidays

3768. Using Twin Lead or Ladder Line for your Antenna's Feed-in-Line ? - Then 'consider' a Pair of Vintage Style TV Antenna Clips . . .

Newsgroup: rec.radio.shortwave
Date: 2005-12-26 16:57:09 UTC

For One and All,

Using Twin Lead or Ladder Line for your Antenna's Feed-in-Line ?
- Then 'consider' a Pair of Vintage Style TV Antenna Clips . . .
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/7149

For those of you who are using Twin Lead or Ladder Line as
the Feed-in-Line for your Antenna and connecting it to the
500 Ohm HI-Z Terminals of your Shortwave Radio / Receiver.

And Find Yourself "Daily" Connecting and Un-Connecting
these very same Wires or Lugs to-and-from the Terminals.

The consider a Pair of Vintage Style TV Antenna Clips.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=5844126194
http://www.technicontact.com/productimages/wImageLarge/VA-02_big.jpg
RadioShack Catalog # _____ ?

Connect the Twin Lead or Ladder Line Wires to the "Clips".

Set the Back-of-the-Radio Terminals to just fit and hold the Clips.

Connect and un-connect the Clips with ease.

TIP - When the Radio is not in-use clip the "Clips"
on to your Shack's Ground Buss.
[Better there then on the Radio.]

hope this helps - iane ~ RHF

Well said. Another other point is you really can't call this a war
since there is no clearly defined target (nation state). Post 911, most
of the capture or killing of Al Qaeda came from police style raids with
the aid of Pakistan. Now it's not clear to me if Pakistan is just
blowing off low level Al Qaeda members to stay in our good graces and a
US budget line item, but are protecting the high level members. I can't
think of how many so-called number 3 Al Qaeda leaders we killed or
captured.

Attacking the Taliban was probably the thing to do, though it really
hasn't effected Al Qaeda since they just scurry like cockroaches. But
attacked the Taliban certainly made it less likely for a nation to
harbor "out of the closet" Al Qaeda members.

Hi,
I have a Yeasu VR5000, I want to add a wellbrook magnetic loop aerial to my
installed double discone therfore giving me 100khz-1300mhz coverage

trouble is the loop and the discone are both 50ohms and my radio only has the
one 50ohms input, can I use some sort of switcher idealy auto so I dont have to keep
switching aerials

and before anyone says use the yeasu's 300hms input with a random wire aerial,
I cant as I have allready bought the wellbrook ALA1530 loop

If you only count attacks on the WTC, like a typical liberal would, and
ignore the attacks on embassies, ships and a USMC barracks. Perhaps you
didn't notice because all Brother Clinton did was feel yore pain.

--
If John McCain gets the 2008 Republican Presidential nomination,
my vote for President will be a write-in for Jiang Zemin.

we can tell your a jerk

If as you say, it is a cheap radio, what exactly would you suggest people
buy for use as a small portable, easy to use, sensitive radio that has sync
lock. We can all have drakes and the likes, but i find those rather
cumbersome to use as a pocket portable.

Hello Oliver.

I believe MFJ sells antenna splitters. Also AES can be of great help to you should you wish to go this route. Remember however that ALL splitters cause some signal loss (up to 6 dB in some cases) which may or may not be important to you.

An easier option, one that I use, is to go to Radio Shack and buy PL-259 -> BNC adapters for your antennas and a BNC -> SO-239 adapter for your radio. Then, it's just a quick twist on and off. This is not as "elegant" as a switcher, perhaps, but you'll get maximum signal transfer with this arrangement and it's even less expensive to boot!

Best,

Joe

Hi,
I have a Yeasu VR5000, I want to add a wellbrook magnetic loop aerial to
my
installed double discone therfore giving me 100khz-1300mhz coverage

trouble is the loop and the discone are both 50ohms and my radio only has
the
one 50ohms input, can I use some sort of switcher idealy auto so I dont have
to keep
switching aerials

and before anyone says use the yeasu's 300hms input with a random wire aerial,
I cant as I have allready bought the wellbrook ALA1530 loop

The NeoFascists only count terrorism attacks on US soil, hence I only
counted the WTC.

You should recall that Clinton did all the investigation work for the
Cole, handed it to Shrub, but Shrub decided not to do a fucking thing.
Iraq was considered more important.

USMC barracks? What, Ronald Reagan's Beirut fiasco? I was having a good
day, and you just had to remind me of Reagan, may he burn in hell.

Are there situations where say the frequency is around 5Mhz, the long
path is mostly over darkness, and the short path is over daylight. Then
maybe the long path is better. It's an artificial example, but
something to think about. That is, the frequency in use may not be the
best for conditions.

Well, your razor-sharp intellect missed the *main* point yet again...

You're right--nothing wrong with a totem pole--but the point he was
trying to make wasn't about totem poles at all, but rather he was saying
your family tree is a *straight line*. (sort of a, ahem, slam, if you're
still not completely tuned in).

Now, just go a wee little bit easier on the fire water and you may pick
up on these things the first time around...

3836. Deutsche Welle DRM on 3995 kHz

Newsgroup: rec.radio.shortwave
Date: 2005-12-27 03:23:34 UTC
From: Byung Myung Sying <pying@fong.com>
Message-ID: <foc1r1plu4l46sb79a1brimscs79vj0qdr@4ax.com>
Source record: 55896

For DRM experimenters, the DW transmission using DRM on 3995 kHz is coming in fabulously here in Detroit at 0300 UTC on 27-Dec-2005 with no dropouts and excellent fidelity.

It's too bad that their DRM transmissions wreak such havoc with the hams trying to operate in the 80 meter ham band!

I heard the Spanish music too... briefly.

MW is coming in very well here tonight in SE MN. Lots of stations booming in
from parts far south of here.

Totem Pole? That gives me an idea.When I trim down that big tall pecan tree in my front yard,I think I will leave enough (about twenty feet or so) standing and make a Totem Pole of what's left of the tree.I need to find me some good Totem Pole photos on the internet to look at.Or maybe something like an old antique wooden Cigar Store Indian statue.

No, that's a rightist slogan. You want something more like "The workers must control the means of production!" or "There'll be pie in the sky by and by!" or "Poverty is a consequence of the enslavement of the proletariat under the yoke of the bourgeoisie!" or "Power to the people! Right on!"

Ah, not so, camel breath. "effin" is an adjective modifying the noun
"ass". Further, compound nouns are not simply juxtaposed, but joined
by a conjunction; no conjunction in evidence in "effin ass".

3876. OT Attention Ladies! Question the PATRIOT Act Now. Before It's Too Late

Newsgroup: rec.radio.shortwave
Date: 2005-12-27 13:53:27 UTC
From: David <rickets@knac.com>
Message-ID: <9ph2r19gpevhjlifb0v561dcb2iangn4t2@4ax.com>
Source record: 55836

December 27, 2005
Question the PATRIOT Act Now ï¿½ Before It's Too Late

by Rep. Ron Paul
Recent revelations that the National Security Agency has conducted broad surveillance of American citizens' e-mails and phone calls raise serious questions about the proper role of government in a free society. This is an important and healthy debate, one that too often goes ignored by Congress.

Public concerns about the misnamed PATRIOT Act are having an impact, as the Senate last week refused to reauthorize the bill for several years. Instead, Congress will be back in Washington next month to consider many of the Act's most harmful provisions.

Of course most governments, including our own, cannot resist the temptation to spy on their citizens when it suits government purposes. But America is supposed to be different. We have a mechanism called the Constitution that is supposed to place limits on the power of the federal government. Why does the Constitution have an enumerated powers clause, if the government can do things wildly beyond those powers ï¿½ such as establish a domestic spying program? Why have a 4th Amendment, if it does not prohibit government from eavesdropping on phone calls without telling anyone?

We're told that Sept. 11 changed everything, that new government powers like the PATRIOT Act are necessary to thwart terrorism. But these are not the most dangerous times in American history, despite the self-flattery of our politicians and media. This is a nation that expelled the British, saw the White House burned to the ground in 1814, fought two world wars, and faced down the Soviet Union. Sept. 11 does not justify ignoring the Constitution by creating broad new federal police powers. The rule of law is worthless if we ignore it whenever crises occur.

The administration assures us that domestic surveillance is done to protect us. But the crucial point is this: Government assurances are not good enough in a free society. The overwhelming burden must always be placed on government to justify any new encroachment on our liberty. Now that the emotions of Sept. 11 have cooled, the American people are less willing to blindly accept terrorism as an excuse for expanding federal surveillance powers. Conservatives who support the Bush administration should remember that powers we give government today will not go away when future administrations take office.

Some senators last week complained that the PATRIOT Act is misunderstood. But it's not the American public's fault nobody knows exactly what the PATRIOT Act does. The Act contains over 500 pages of detailed legalese, the full text of which was neither read nor made available to Congress in a reasonable time before it was voted on ï¿½ which by itself should have convinced members to vote against it. Many of the surveillance powers authorized in the Act are not clearly defined and have not yet been tested. When they are tested, court challenges are sure to follow. It is precisely because we cannot predict how the PATRIOT Act will be interpreted and used in future decades that we should question it today.

There have been no overt attacks since the anthrax mailings because
Bush is doing enough damage all by himself. He is doing what Bin
Laden could only dream of; destroyin America from within.

3881. E1 Vanishes From The Source

Newsgroup: rec.radio.shortwave
Date: 2005-12-27 14:37:21 UTC
From: plls <firestarter5@hotmail.com>
Message-ID: <43b15397$0$3380$2c56edd9@news.cablerocket.com>
Source record: 55841

The Source (Radio Shack in Canada) now has no listing for the E1. While it was listed before as a "net only" purchase, it has now vanished altogether! Even trying a link RHF posted last month turns up "The page you are looking for is not found". Yet they still show the Sat 800 available (which it is in severely limited quantities).

Sold out or no longer interested in trying to sell a $600-$700 radio?

See my earlier post on the subject.

The worst sort of protection is the kind that actually makes things worse, such as a discharge-tube ("arc plug") that only protects one of the two antenna conductors.

A far more common approach is to take the discharge tube, connect it to the center conductor of the coax and then bond the ground side to the shield of the coax. This is what the suppressor sold by MFJ, among others, does. If your A-D switch does this, at least it won't assist in frying your gear.

PolyPhaser and ICE add a blocking capacitor and fast-acting gas tubes. The speed at which they fire matters.

For receive-only application, PolyPhaser also provides semiconductor protectors, but they aren't as durable as their gas tube protectors.

I personally use IS-B50LU-C0 (or IS-50LU-C0) Polyphasers for my HF equipment and they have gotten me through a number of hairy situations, including one direct strike.

Whatever you use, make sure it is used as part of a mitigation system. Putting a supressor in-line all by itself won't do you any good at all.

3905. How High will my Shortwave Listener (SWL) Quarter Wave Length (1/4 WL) Vertical Antenna Need To Be ?

Newsgroup: rec.radio.shortwave
Date: 2005-12-27 17:25:47 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1135704347.205632.274530@g47g2000cwa.googlegroups.com>
Source record: 55965

For One and All,

A common Question Asked by many Shortwave Listeners
(SWLs) concerning Vertical Antennas is :

How High will my Shortwave Listener (SWL) Quarter Wave Length
(1/4 WL) Vertical Antenna Need To Be ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/7157

Shortwave Meter Band and Quarter Wave Length
1/4 WL Vertical Antenna Height :
120 Meter = 97.5 Feet
90 Meters = 70.9 Feet
75 Meters = 59.2 Feet
60 Meters = 47.7 Feet
49 Meters = 38.5 Feet
41 Meters = 31.8 Feet
31 Meters = 24.5 Feet
25 Meters = 19.7 Feet
22 Meters = 17.1 Feet
19 Meters = 15.1 Feet
16 Meters = 13.2 Feet
13 Meters = 10.8 Feet
11 Meters = 9.1 Feet

For the 120M to 60M Shortwave Bands the Coax Cable
Feed-in-Line can be Equal to the Height of the Antenna.

For the 49M to 11M Shortwave Bands the Coax Cable
Feed-in-Line can be Twice the Height of the Antenna.

TIPS - For the Shortwave Listener (SWL) :

The Longer (Higher) the Verical Antenna the Better.
With 50, 60, 75 and 100 Feet being OK - Provided that the
Feed-in-Line is of Equal Length. This gets the Vertical
Antenna away from the House and helps to reduce the
Man-Made Noise pick-up from the structure itself.

Remote Ground Rod.
With Vertical Antennas Grounding is very important.
Placing a Ground Rod (and several 1/16 WL Radials
if needed) at the Base of the Vertical-Up-Leg of
the Antenna is a good construction technique.

Bury the Coax Cable.
Common Mode Noise can be a real problem with Vertical Antennas and Burying the Coax Cable can be the First Step in Reducing this Noise Source. Or use a Snap-On Ferrite Core at each end of the Coax Cable.

Matching Transformer.
For a Multi-Band (All-Band) Vertical Antenna a 9:1 Matching Transformer (UnUn) can provide broadband matching for 500 kHz to 30 MHz.

Trees as Vertical Antenna Support Structures.
For that Long Tall Vertical Antenna Trees are good Vertical Antenna Rigging Structures for the Top-End Mounting Point. Normally Tree Limbs are used as the actual Mounting Point and the Tree Trunk itself is not use. Try to use a Tree Limb that is at least 2"-3" Thick. Locate the Mounting Point about 3 to 5 Feet Away from the Truck of the Tree. Making the Mounting Point Mechanically Strong with little physical movement of the Wire Antenna Element.

hope this helps - iane ~ RHF

I took this oath once, and as far as I recall I've never been asked to rescind
that oath:

"I, (name), do solemnly swear (or affirm)
that I will support and defend the
Constitution of the United States
against all enemies, foreign and domestic;
that I will bear true faith and allegiance to
the same; and that I will obey the orders of
the President of the United States and the
orders of the officers appointed over me,
according to regulations and the Uniform
Code of Military Justice. So help me God."

You are the enemy, 'tard boy. Watch your 6.

3911. The Long and Thin Vertical Loop Antenna. [The Non-Resonance Vertical with a Difference]

Newsgroup: rec.radio.shortwave
Date: 2005-12-27 18:03:55 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1135706635.462693.86060@g47g2000cwa.googlegroups.com>
Source record: 55971

For One and All,

The Long and Thin Vertical Loop Antenna.
[The Non-Resonance Vertical with a Difference]
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/7158

Another form of "Receive Only" Vertical Antenna for
the Shortwave Listener (SWL) is the Long and Thin
Loop Antenna. Actually this Antenna is usually
Rigged to a low Tree Limb and is often only about
16 to 32 Feet High. But since the Wire Antenna
Element is Folded (Bent) the amount of Wire in the
Air is twice as much 32 to 64 Feet. This generally
Results in an 1/ WL Vertical Antenna that is usable
in the 41M to 19M Bands and is effectively a Half
Wave Loop Antenna for those same Shortwave Bands.

Why the Shortwave Listener (SWL) may choose this Antenna :
Think of this Antenna as a Random Wire {Available Space}
Antenna that just happens to be a Long and Thin Vertical Loop
Antenna that meets your requirements for a small ground foot
print (little land area) and you happen to have a Tree to
Hang-It-From :o) The Long and Thin Vertical Loop Antenna
also happens to be a fairly Stealthy Antenna when Rigged
within a few Feet of the Tree Trunk :o)

HOW TO BUILD THE LONG AND THIN
VERICAL LOOP ANTENNA :

Take two pieces of PVC Pipe about One Foot Long
with End-Caps on both ends.

Next take your Antenna Wire and Fold it in Two.

At the Fold (Bend) attach the Antenna Wire to one
of the pieces of PVC Pipe with the Wire separated
Wrap the Wire and Secured the Wire at each end of
the Pipe.

Attach a Long Rigging Rope (Nylon / Poly Rope)
to the piece of Pipe.

[//=========\\]
| |

Note - This is your "Top-Bar" of the
Long and Thin Vertical Loop Antenna.

Slowly Pre-Position {Rig} the Top-Bar part of the
way 'up' the Tree keeping the Antenna Wires Straight
and Kink-Free.

Now take the two ends of the Antenna Wire and
attach the Antenna Wire to the other piece of PVC
Pipe with the two Wires separated.

Wrap one Wire and Secured the Wire at one end
of the Pipe leaving about two feet as a free (lose)
as a tag-end.

Wrap the other Wire and Secured that Wire at the
other end of the Pipe leaving about two feet as a
free (lose) as a tag-end.

Attach a very Short Rigging Rope (Nylon / Poly Rope)
to the piece of Pipe.

```
| |
[//=========\\]
| |
x x
```

Note - This is your "Bottom-Bar" of the
Long and Thin Vertical Loop Antenna.

The Feed-in-Line Connection.
Connect the Two Wire Ends to the Coax Cable :
One to the Center Conductor and the other to the
Outer Shield.

Matching Transformer.
For the Shortwave Listener (SWL) the better Bottom-Bar
Connection is to use a Matching Transformer (Balun)
with a 4:1 Ratio between the Wire Antenna Element
and the Coax Cable Feed-in-Line.

Grounding.
"If" directly connected to the Coax Cable : Then the
use a Snap-On Ferrite Core at each end of the Coax
Cable. A Ground Rod at the base of the Vertical Loop
Antenna is not recommended and the Shack's Ground
is the System Ground.
However, "If" a Matching Transformer is used then a
Ground Rod at the base of the Vertical Loop Antenna
is recommended; with the Outer Shield of the Coax
Cable attached directly to the Ground Rod.

Summary.
Looking for a very small area limited space antenna ?
The consider the Long and Thin Vertical Loop Antenna !

Using the information regarding propagation that's available to you on-line or elsewhere, what's the process by which the most successful of you decide to monitor the SW bands on a given day/night?
I'm in So. Minnesota and use a 7600GR with an AN-LP1

What are the specific web sites you use for data gathering? Do any of you use what I'll term as "propagation software" to help you make use of the data gathered?

> of the data gathered?

For my purposes I just check this web page every 3 hours
http://dx.qsl.net/propagation/propagation.html
I look for...
SFI approaching/exceeding 100 (the higher the better... come on 300)
A Index 10 and less, lower is better
K Index 3 or less, I want a 0

Regardless of propagation I listen every day, but I'm not sure if my
location (Southeast US) is better for reception than yours.

The real experts here will give you much more detailed and valuable information.

AL [K4GLU],

DX Engineering Active Receive Antenna Systems ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/7159

All I know is what is printed on their website. From all outward
appearances
these items seem to be very well built - no evidence of a lot of
plastic.

MAYBE - "W8JI" has some more infomationand comments about both his
Design
and Testing of these Active Receiving Antennas at this time to share
with us all ?

DX Engineering claims that their Active Receive Antenna
Systems offer excellent receiving performance from 100 kHz
to 30 MHz while using only a 102" Whip as the Antenna Element.
Info => http://tinyurl.com/7swdj

Does anyone have any hands on experience yet with the
ARAH-1P & ARAH-1V made by DX Engineering?

These can be seen at
http://www.DXEngineering.com

If there are any users on this group that have one or both
I'd be interested in hearing your performance comments.

They also offer a 4 Square setup using 4 ARAH-1V's that
looks interesting if you have the room.

I tried to get some info from W8JI who designed this setup
along with the Active Antennas at the Dayton Hamvention
in May but couldn't pry much out of him beyond the fact
that for optimum performance on Medium Wave you needed at
least 200 foot spacing between antennas.

DX Engineering also offers a broadband preamp, the RPA-1,
that has gotten excellent reviews from everyone who has
used one. Note that I have no hands on experience myself
with either the antennas or the preamp.

No More Universal for me. I ordered items on line and had to follow up with a phone call (why even bother with on line if you have to call on the phone anyway). I got the old "we're running behind christmas is coming" B.S. I cancelled my order with Universal and ordered From HRO. Automatic confirmation and tracking number via e-mail. Shipment arrived 2 days later. The funny thing is that the Universal web site is much better for researching any prospective radio purchase. So I browse the Universal web site and buy from HRO.

3938. Single Wire Antenna {Longwire / Random Wire Antenna} - What To Use : Antenna Tuner? and/or Pre-Selector?

Newsgroup: rec.radio.shortwave
Date: 2005-12-27 21:03:44 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1135717424.789742.94930@g43g2000cwa.googlegroups.com>
Source record: 55997

Phil,

Single Wire Antenna {Longwire / Random Wire Antenna}
What To Use : Antenna Tuner? and/or Pre-Selector?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/7161

ANTENNA TUNERS :
For a Radio/Receiver operating over a wide frequency spectrum using a single length of Wire as the Antenna Element. The Antenna Tuner will allow you to Match (Tune) the Impedance of the Antenna and to Match (Tune) the Impedance of the Radio/Receiver Antenna Input. The Antenna Tuner is often and Interactive Device in which the Movement of One Control will require the Movement (large or small) of another Control (s); followed by a minor adjustment of both. Antenna Tuners are most often used when you are changing from one Shortwave Frequency Band to another. With a Shortwave Band change you will usually find that you will have to adjust the Antenna Tuner to get the Best Match (Highest S-Meter Reading) between the Antenna and Radio. Within a given Shortwave Frequency Band - once set the Antenna Tuner may need no other adjustment. However, when using an Antenna Tuner in the Medium Wave (AM-BCB) you may find that you have to retune for each new Radio Station Frequency throughout the Band. If a 9:1 Matching Transformer is used between the Antenna and a Coax Cable Feed-in-Line : Then often with Modern AM/FM Shortwave Radios an Antenna Tuner is not needed. Note - Antenna Tuner Circuits and Designs come in many Flavors.

PRE-SELECTORS :
The Pre-Selector can be thought of as a Variable "Narrow" Band Pass Filter. The Radio Operator uses the Pre-Selector to 'selectively' "Pre-Choose" a very Limited Range [Band] of Frequencies to "Feed" Pass-InTo the Radio/Receiver. All other Out-of-Band-Width Frequencies are Attenuated to some degree by the Pre-Selector. If a 9:1 Matching Transformer is used between the Antenna and a Coax Cable Feed-in-Line : Then a Pre-Selector will usually work very well and provide some benefit with most Modern AM/FM Shortwave Radios.

IMHO - For the Shortwave Listener (SWL) using a Receive Only Random Wire (Single Wire) Antenna the Pre-Selector is the better of the two devices to use. Especially when used in conjunction with a 9:1 Matching Transformer along with a

Coax Cable Feed-in-Line.

hope this helps - iane ~ RHF

Any suggestions for homebrew or commercial antennas?
I want to keep it simple.

2) I'm confused on antenna tuner and preselector theory.
I always though tuners adjusted the electrical length
of the antenna hence selecting the frequency desired.
Once that was accomplished, the preselector would further
define the exact frequency.

I guess I was wrong. The tuner corrects the impedance
and the PS defines the frequency?

I need an example in order to understand there respective applications.

Let's say you have a long wire.

How would you install both a tuner and PS and how does
each affect the performance of the antenna.

Thanks
Phil

My dear supporters of the status quote, and admirers of G.W. Bush,
Hearing about how some of your tax dollars have been used to kill and
cripple innocent people and hearing that your highly respected leaders
are filthier than any public restroom must take you out of your comfort
zone, dear. You poor thing. Hopefully you'll lose some sleep at night
knowing what you support by calling for those who speak the cold hard
truth, to shut up.

The truth will set us free from genocidal, warmongering, fools and
their wars. To do that it must be spread aroundnot hidden.

W

The folllowing is from the URL: http://www.fuckchristmas.org/

This is a F-N MASTERPIECE. ENJOY you mother-fucking assholes. (grin)

Oh man, fuck Christmas.

Seriously – are you kidding me with this “There’s a war on Christmas” bullshit? FOX News wasn’t raking in enough cash already from all the Christmas commercials for Kill ‘em All Barbie and Girls Gone Wild Brand Toddler Gear? They had to start publishing books about some bogus attack on Christianity? And who did they pick to lead this particular charge?

John fucking Gibson. This guy has wiener written all over him.

Bill O’Reilly gets all the credit as the biggest nutcase in FOXville, but Gibson really deserves his own special wing in the happy house. This motherfucker’s embedded assignment reads “Up Karl Rove’s ass.”

What makes him such a dick? I mean, besides making a fortune by screaming hysterically about how oppressed Christians are by the other twenty percent? How about advocating bombing countries that don’t vote the way we want in their own elections? Way to encourage democracy, fuckhead. And maybe he was kidding when he wished, on air, that the French had gotten the 2012 Olympics instead of the Brits so the terrorists would “blow up Paris,” but it might have been just a touch over the top to call for it again on the day of the London train bombings. Classy move, asshole.

And really? That’s just scratching the fucking surface. Anyone remember who was responsible for the bombing of the Federal building in Oklahoma City? John does: Iraq. And speaking of Iraq, Gibson thinks Rove deserves a fucking medal for outing that CIA agent. And, like any good reporter, he wanted to burn the Florida ballots after his buddy Bush got “elected” rather than, I don’t know, count them? “Is this a case where knowing the facts actually would be worse than not knowing?” That right there is why sometimes it’s useful for journalists to go to, what do you call that fucking place? Oh yeah, journalism school.

And now he's all worked up about Christmas being stolen. What is this, the fucking Fairytale Network? It's a national fucking holiday and we're spending gobs of our hard-earned tax dollars on wreaths and lights for your special Santa day. But these bastards are all "But they call them Holiday trees!" Here's a clue: no, they fucking don't. Ok, maybe in a couple places, like on FOXNews.com and at the White House, but if Christmas is under attack, I'm Kris fucking Kringle.

And guess who's stealing Christmas, according to Gibson. Go on — guess. "A cabal of secularists, so-called humanists trial lawyers, cultural relativists, and liberal, guilt-wracked Christians — not just Jewish people." (Emphasis mine. Pure, unadulterated anti-semitism, his.) A cabal? Are you fucking kidding me? Could we try to be a little more fucking original with our Jew-hating?

Speaking of Jew-hating, Pat Buchanan has joined the hype-a-thon of the supposed Attack on Christmas, too. Or, as he put it, "What we're witnessing here are hate crimes against Christianity." Sorry? We're not so hot on paying for an inflatable camel for your goddamn nativity scene and suddenly we're Slobodan fucking Milosevic? Fuck you. Get some goddamn perspective, you little prick. When they start hunting Christians in the streets, it'll be time to start yelling "Hate crime." And no, it won't count when they start chasing you with the torches. That'll be called "The Most Wonderful Time of the Year."

And Bill O'Reilly, Gibson's cellmate in the silly shack, is doing his part to save Christmas, too. He's been going after New York's Mayor Bloomberg (that Commie) because he says the Christmas Tree at Rockefeller Center has been renamed a "Holiday Tree," and "No Christian Christmas symbols are allowed in the public schools." The only problem? Neither of those things is even remotely fucking true.

It takes some super-sized balls for O'Reilly to get all lathered up about sinners and their fictional anti-Christian crusade. Every fucking person on the planet has hard and fast evidence that Bill is a world-class pervert, but still he feels totally justified lecturing the rest of us on our moral inferiority.

How fucked up is Bill O'Reilly? Pretty fucked up. Everyone got so crazyfaced about him confusing a sponge and a Middle Eastern snackcake (pretty fucking funny, mind you), that they missed the scary bit: what he meant to say. Old Bill wanted to get all funky on his intern like this: (you'll excuse my foul language, I'm quoting an award-winning newscaster here) "I'd take the other hand with the [loofah] thing and

put it on your pussy."

loofah (lū'fə) noun. A natural exfoliating sponge.

exfoliate (ĕks-fō'lē-āt') verb. To remove
(a layer of bark or skin, for example) in flakes
or scales; peel.

That's right. Bill O'Reilly, fount of morals, is super
familiar with the female anatomy. So much so, that
he knows how good it feels to have one's pussy
exfoliated. We're talking h – o – t, Hot.
That's exactly who I'm going to for my life lessons.

Sorry, where were we? Oh yeah, fuck Christmas.

Can we back up just a couple steps here? At what
point did a basic understanding of the separation
of church and state become a fucking war on religion?
And how did we get to the point where you can call
an organization set up to defend our civil liberties
"Terrorists" on national television and no one fires
your ass? Enough. Fuck all of you lying little shitheads
who wish the world was out to get you so you could
play the poor oppressed victims. Wake up assholes
— you're the cowboys, not the fucking Indians.

"But we want to display our Christmas tree on city property!"
You can, go right ahead. "They're stopping us from
praying in school!" They're not, so fuck off. "We're
not allowed to say 'Merry Christmas' anymore!" Are you
fucking kidding me? Knock yourself out. Say it at work,
scream it in your high school lunch room, hell, tattoo it
on your fucking g-ddammed slooped forehead for all we care.
Guess who's gonna be there defending your right to do
every one of those things? The fucking ACLU. One of
these days you bastards are going to drive those fuckers
out of business, and then you'll see some actual attacks
on your religious liberties. I thought conservatives
were supposed to be all proud and independent?
When did they turn into a bunch of fucking crybabies?

Let's back up even fucking further, shall we?
Can anyone tell me how old Christmas is? Anyone?
Two thousand years, give or take, right? Gee, who's
been reading their No Child Left Behind History Textbooks?
Try fucking four thousand years. Huh. Twice as fucking
long as your little baby king has been around. How
could that possibly be, unless. . . waitaminute. . .

Christmas isn't fucking Christian. Ok, now we're talking.

That’s right, that Yuletide cheer you’re spreading? What exactly
do you think Yule is? It's the fucking Pagan celebration of solstice.
And those “Christmas” traditions? They’re not just *like* Pagan
rituals, they fucking *are* Pagan rituals. Way before your Jesus
got all magical with the bread and fishes, the Romans were
celebrating the birth of Mithra on . . . guess? Go on – guess.
December fucking twenty fifth. What a weird coincidence, eh shithead..?
Practically the whole thing is ripped off from the fucking
Druids and the Romans. Twelve days? Check. Exchanging gifts?
Check. Mistletoe? Check. And you’d better fucking believe that
those decorated trees that Gibson and Co. are so bent out of
shape over are as Pagan as the Rune and Crystal Shack
at Pentagramfest 2005. You might as well be building miniature
fucking Stonehenges in your den or rec room alongside the bar.

And don’t you read your own goddamn Bibles? Jesus was
born when? In the middle of winter? Lot of Shepherds out
watching their flocks around that time of year in Bethlehem?
No, because they’d be freezing their fucking asses off.
Tell you what – y’all go figure out which one of the different
Bible stories about the birth of Baby Jesus® you want to
believe, and then we’ll argue about whether it fucking
happened like that or not.

Christians just stole a bunch of traditions from other
cultures, slapped them together, stuck a fucking tinfoil
star on top and called it the Most Important Holiday
of the Year. Modern American Christmas makes
Michael Jackson look positively organic.

But you boys at FOX still freak out every year about
how everyone's out to get your special trees. This is really
the most important thing you have to talk about? Whether
Target says Happy Holidays or Merry Christmas?
Here’s a brainstorm: there’s a fucking war on. Our soldiers
are out there dying in an Islamic shithole Country while you
guys do your 14th live feed of the day from WalMart to
show us what good little consumers we are. What Would Jesus Do?
He’d jump over that newsdesk and kick your ass
for that shit. Are you sure you want to hang your journalism
credentials on a story about what some guy calls a tree?
They should break one of the branches off and shove it up his
arse raw and with the splinters still intact.

Well we’ve fucking had it. You want to play bullshit games
and scream about how God’s fucking judgment is gonna
come raining down on us if we don't start watching our
vocabulary? Go right the fuck ahead. But let me clue
you in on something: fire and brimstone ain’t no
deterrent for us. We’re not going to hell, assholes,
we’re fucking in hell. We live with you.

And fuck Easter too, you fertility-rite-celebrating,
whiny, self-righteous, don't-know-the- history-
of-your-own-religion assholes.

Fuck off.

:)

3941. Re: Two aerials one radio tech help

Newsgroup: rec.radio.shortwave
Date: 2005-12-27 21:14:51 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1135718091.543941.145110@z14g2000cwz.googlegroups.com>
Source record: 55999

Dear Oliver,

Whenever you "combine" two antennas into one feed line there will be signal loss. If you listen primarily to powerful (and perhaps not-so-powerful) international stations this may not be a problem for you. If, however, you wish to DX, then you need every mcv of signal possible.

As you may know, I use the Wellbrook ALA 330S Active Loop Antenna with my AOR AR7030 Plus Receiver. When I decided that I really "had" to use that antenna with my Grundig Satellit 800 (which is in a different room) as well, I could have taken the "easy" way out and installed a splitter. But I personally will not use an antenna splitter due to the inherent signal-loss therefrom, so, instead, I ordered a SECOND Wellbrook ALA 330S antenna. (That's the kind of "nut" I am!)

Best,

Joe

> Thanks for the ideas, I wonder if it is possable to combine the two [antennas]
> somehow as if it was some sort of duel aerial without the need to manualy
> switch, without heavy loss of course.

Yes, just what I'm apparently looking for. Thanks to both of you.
Obviously I'm just cutting my teeth as to things propagation related.
I enjoy this hobby but due to time constraints, I like getting
something in exchange for the time invested. I suppose that makes me
more of a content SWLer than a DXer.

My last time out (a couple years ago) I got frustrated and set my
equipment aside, or sold it, and I've decided to this time delve a bit
more into the technical end of the things that really control the
activity. I have noted less than good results particularly over the
past weekend when I had some time to throw at my little rig.
Understanding the "numbers" a bit better, I guess I see why.

As for my take on this group, I seem to get good advise when I need it
and while I appreciate it, it seems one does have to wade through a
lot of OT (read: political) ranting and raving. That being said, I
suppose its not much worse than other Usenet groups that I read and
post to.

3949. ---Why All the Juvenile Posts on this NG?---

Newsgroup: rec.radio.shortwave
Date: 2005-12-27 21:31:58 UTC
From: Lenny <freilich@comcast.net>
Message-ID: <a_GdnZUo7vxNLyzeRVn-uA@comcast.com>
Source record: 56008

I left this newsgroup a little over a year ago because of all the juvenile goings on.
So, I came back recently to see how things were going and because my SW interest
was picking up again.
What do I see?

"So and so is an as*#ho#e"
"Check out nig**mania"
"Mentoring and s#x: Boys & ....."
"Stevie sh*t"
"Bush on the Constitution: 'It's just a go**^^%%$#ed piece of paper"

I mean, come on people, what is this?
A newsgroup where like minded people can come to learn about and discuss this wonderful hobby?
Or a 4th grade class of juvenille delinquents?

In fairness, 99.9% of you are great and make great posts.
But don't reply to the other .1% idiot's posts and fuel their fire.
They live for this and you all know it.
Isn't there some way to ban those morons?

I generally like this NG and learn an awful lot of great stuff that enhances my
SW listening experience.
But it seems like nothing has changed in the last year.
Please help me understand?

Lenny

3950. Re: ---Why All the Juvenile Posts on this NG?---

Source record: 56010

Frankly, I think the E1 is a little more "high end" than most of the stuff they sell...probably figure it is too expensive for their regular customers. They never carried the Satellit 800 to my knowlege, so it kind of makes sense they wouldn't carry this one, either.

I wouldn't accuse the Clintons of this either. George Bush is a
flat-out bonkers who thinks he can bring Jesus back to life. He is
capable of any kind of twisted behavior. Look at him. Look at the
twisted gang of deviants he hangs out with. Look at his family
history (Hitler's bankers, etc.).

Has anyone received replies from either DX Test from WISN-1130/ WOKY-920 in Milwaukee, WI or from KEVA-1240 in Evanston, WY?
I sent .mp3 CD's to both stations but, as of yet, have heard nothing from either of them. Thanks!

I seem to recall getting an email back from them. I wasn't to concerned with the test as I'm just across the Lake from them, but I let them know that the test was being heard.

3970. CIAO - 530 kHz

Newsgroup: rec.radio.shortwave
Date: 2005-12-27 23:27:21 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <43B1CDD9.C824122A@milestones.com>
Source record: 56030

Been hanging around 530 kHz for various reasons and tonight wasn't hearing Radio Vision Cristiana. A bit ago I started hearing some Indian type music on the frequency, and announcer is not in English or French. Could pick out some phone numbers given out with the area code (416). Turns out the station is CIAO in Brampton, ON. They do ethnic programming.

Thought it odd when I turned on the Superadio II and found that the station was coming from either the east or the west of me.

They run 1000 watts daytime and supposedly 250 at night. It sounds like they haven't yet dropped power though it's past sunset.

Yeah, that does bother me if the idiots chased off folks from other
countries whose input into this group would make it a more worthwhile hub
for sharing info.

I guess I was just looking at usenet as a whole and not just RRS.

www.devilfinder.com Simple Homebrew Morse Code Transmitter Radio

What is the very simplest homebrew Morse Code Transmitter Radio and homebrew Morse Code Key and the very simplest Morse Code Receiver (all three items using the bare minimum of parts) to get the job done,transmitting and receiving via Morse Code around the World? Something along the lines of "Foxhole Radio" and also "matchbox size" radio.What if the "Big One" goes up and fries our radios?
Not only that,but I like to read about effective homebrew things that work and work very well.

DaviD Requests - " Quit fucking posting your insane messages to me. "

DaviD - First as to My Message / Writing / Posting Style :
Insane and Insanity = Yes It Is A Fine Madness !

David - 'if' I have ever acted unkindly - when you have posted On-Topic
Message and acted as member in good standing of this NewsGroup :
Then... I Do Humbly Apologize To You ~ RHF

David - A Point-of-Clarification - Please Note That :
I Post Directly To The NewsGroup - Not To You Personally.
TO : Rec Radio.Shortwave {NewsGroup via Google Groups}
and Not To : David <rick...@knac.com>

However - DaviD - "IF" you Post something that is Clearly Off-Topic
and what appears to me as an IN-YOUR-FACE attempt to use this
NewsGroup as a Bully Pulpit for a Liberal Agenda Hit-Piece or
another Bash America Tirade or Anti-Christian Rhetoric :
1 - Then My Replies Will Be Directed Right Back At You !
2 - I Will Not Be Bullied Into Silence By The Likes Of You [.]

REMEMBER - Freedom of Speech {Screech} is a two Way Street.
[Have Soap Box - Will Travel to babel, and Babel. and BABEL !]

RESPECTFULLY - Holding One's Tongue Real Only Works :
When the Other Party Does the Same Out-of-Equal-Respect [.]

DaviD - After all - All I have to do is keep it light-hearted
and For Me - It's : Oh What Fun ! :o) ~ RHF

david - now go enjoy your radios ~ RHF

Your best bet is to simply ignore all of the useless political
threads....mostly just a bunch of simple-minded buffoons who seem to be
hell-bent on proving to one another just how moronic they are.
On the whole, though, this remains one of the better venues for
informed opinions on shortwave-related topics. Provided you avoid
becoming mired the off-putting rubbish, I'm sure you'll find
participation in this group to be worthwhile.

junius

> picking up XM anyway...
>

Corporate agreements often preclude the promotion of a competing
product as a condition of carriage. While E1 is not XM capable from the
factory, it IS an XM compatible product. And it is promoted as an XM
product. As such, it may present promotional conflicts with the terms of
a vendor's Sirius agreement.

Sony has similar exclusions in it's contracts with some retailers.
They may not promote, in any form, any product defined by Sony as
forbidden. Violation risks the retailer's access to the entire Sony line.

It's possible Sirius precluded XM capable or compatible radios as a
condition of carriage.

It's the same reasoning from the other direction that brought Sirius
rather than XM to Ford.

The 9-1 matching transformer works great if the antenna impedance is
450 ohms and it is being matched to a 50 ohm antenna input, a 9 to 1
transformation. But what if the impedance of the antenna is 2000 ohms,
or 10 ohms or 800 ohms? It's a crapshoot with a long wire, because you
don't know what the impedance really is.

An antenna tuner, on the other hand, can be varied to match a wide
range of antenna impedances to a 50 ohm input.

True, but for a modern receiver insignificant.

The main thing is that you're not exceeding the impedance of the
transmission line.

The Source now has nothing to do with Radio Shack in Canada. It used to
but corporate mergers and aquisitions made it a completely separate
company. Radio Shack Canada is planning to establish stores in the main
cities in Canada, but I have not noticed any action since the Radio
Shack name disappeared this summer. What is confusing is that both
Radio Shack USA and the Source carry the same products with different
labels from the same Chinese sweatshops. For now, Radio Shack Canada is
just a concept with no stores..

My kids school no longer has x-mas plays. They are not allowed to pray in school. In her religion class, they do not study any form of Christianity. Bill O'Reilly was cleared of the sex allegations,and if you would have kept up with that bit of the news, you would know that Bill O'Reilly's lowers WANTED them to release the alleged tapes because there were none. I could go on, but it would be a waste of bandwidth and your going to believe what you want no matter what I say.

DJ:
Don't forget to listen early in the evenings (or even late in the afternoon)
during these winter months. The 41, 31, 25, 22, 19 and 16 meter bands may
be more active at that time. As far as propagation goes, you can get as far
into it as you like but any MUF/LUF plotting program will show you when
reception is not possible (and when it is). SWLog and some other programs
have a handy propagation module built into the program.

Saint Elizabeth, Saint Veronica, and Many Saints say, "Many of Us are present here now, but We have come to awaken your mentalities to look at human life in a deserving way, and that it has a purpose for you to live in your daily manner of doing things, always remembering that All of Heaven is aware of every move you make, every word you speak."

REVELATION DELIVERED THROUGH FRANCES M. KLUG
ON JANUARY 18,2005 AT 12:31 P.M.

SAINT ELIZABETH
SAINT VERONICA
MANY SAINTS

"I am Saint Elizabeth. 'I am Saint Veronica.'"

They are smiling.

"If We were to mention All of Our Names and Our Titles, it would be some time before We would have the time with you to write What We want you to hear from Us.

In the human creation of men, women and children, a Specific Gift of Divine Love is instilled to give to this creation of human life abilities, understanding, motivations and many things that many walk through life enjoying, not caring what the title of what they are involved in describes.

A Gift of Divine Love to the human way of living is a Gift of Divine Love not fully understood. It is taken for granted, because it is a practice in the living form, way and reasonability.

I know the Words are different than you are used to receiving, but sometimes We Saints Here in the Heavens enjoy pointing out to you, yet in the living state, how close We are in communication and in caring.

Children should be instructed in a manner and way that they can perceive in their degree of mentality that human life is a Gift Greater, because it is in close association to The Divine Creator of All Things.

Today many individuals are celebrating special days, special times; also, find that this day will be a day to remember by them, what occurred and what gave them happiness for a period of time that they will remember a long time.

Though the Words are different than you are used to hearing Us speak, We find happiness in sharing times such as these.

You live in a time wherein there is much dissension mentally, morally, physically, because in the human state so much is taken for granted, or out of concept regarding its reality.

Many of Us are present here now, but We have come to awaken your mentalities to look at human life in a deserving way, and that it has a purpose for you to live in your daily manner of doing things, always remembering that All of Heaven is aware of every move you make, every word you speak.

Human life was created to be able to enjoy many things. As you enjoy whatever it is that pleases you, do not forget, The Heavenly Father designed you and gave you the Gifts that would make your life a happy life, one to remember."

Hello - Calling R2000SW and Telamon Where Are You ? ?

The Topic has move to the "Impedance of the Transmission Line"

IIRC - If the Matching Transformer is used and the Secondary Side
of the Matching Transformer exhibits a nominal Impedance of 50 Ohm;
and is connected to a 50 Ohm type Coax Cable; that is connected to
a Receiver's 50 Ohm Antenna Input.

The Coax Cable for all practical purposes is not a significant part
of the Impedance Relationship (Ratio) between the Antenna and
the Receiver's Antenna Input.

The Primary of the Matching Transformer 'helps' to smooth-out
the variations in Impedance of the Antenna due to changes in
Frequency with respect to the Receiver's Antenna Input Circuit.

The Impedance Matching improvement is far from perfect :
But the Dynamic Range of the Front-Ends of most Modern
Shortwave Receivers can easily compensate for any signal
lost due to Impedance Miss-Matches between the Antenna
and the Receiver's Antenna Input Circuit.

ate in the 80 meter ham band!
Your idiotic third grade "sloganeering" isn't going to make DRM go away. Responding to every DRM post with "DRM = QRM" just makes you appear annoying and foolish, it doesn't add anything to the discussion. Grow up.

Shortwave DX'ers have always had to struggle agains QRN from the USSR's "woodpecker", the RTTY news services etc. DRM is no better and no worse than any of these noises.

The technology is very interesting and it does provide superb fidelity over shortwave in a very technologically cool way. Whether it will ever become viable is open to question due to the unpredictablility of shortwave propagation and the enormous real estate needed for shortwave transmitters.

> They sell other Etons.

If you look at their sat radio stuff, there is no XM equipment. At least any ads I've seen since I became interested, Radio Shack seems locked into Sirius, to the exclusion of anything that could be directly linked to receiving XM broadcasts. Too bad, because they miss out on the E1, plus the Porsche Design Etons (p7131 & p7132). Any other Etons don't compete with the tie to Sirius.

Invader3k made a good point, too. The E1 really doesn't fit in with the price scheme of the other electronics Radio Shack sells. It's not exactly the prime source for getting the best in home theater or shortwave equipment. Their market is closer to entry level.

Only point I was making is the impedance of the antenna could be
anywhere from a few ohms to thousands of ohms. A 9-to-1 balun between
the antenna and a 50 ohm transmission line only helps if the antenna
is in the neighborhood of 450 ohms.

I would suggest that you go to the Amateur radio section on ebay and study the low-end offerings. It is not likely that you would be able to assemble anything from parts although you could go to Goodwill and see if any of the "wimmins" has a working osculator.

DRM noise may be no worse than other sources of interference were, but there is no longer any justification for such interference. There's plenty of open spectrum now. The DRMers ought to arrange their tests outside the ham and SW broadcast bands.

Satellite radio is an even better solution from the reliability and real estate point of view.

DRM is an attempt to compete with satellite radio. Imagine if the motorcycle makers tried such a patch up in order to match the car manufacturers. Sure, you could make a motorcycle with a few extra seats and a roof. A really first rate engineering effort might result in a technologically cool four seat motorcycle which keeps the people kinda dry 99% of the time. But it would be a lousy motorcycle and a lousy car. Shortwave radio, like motorcycling, appeals to hobbyists and enthusiasts. We enjoy the variability and unpredictability.

http://www.circuitcellar.com/
is similar, though probably a bit more agressive than N&V.

In the days, N&V was a freebie, then they hit it big. ;-)

A few years ago, they were doing high voltage experimenting in N&V. I managed to find a few power supplies that fit the bill, though I never built more than the Jacobs ladder. They had plans for a Tesla coil project that I managed to find many of the pieces, but never got around to building. Those extremely high voltage caps aren't all that common, though you can find them in CCFT drivers (WIMA).

I regularly pick up an unusual data signal
at 15937.5 kHz (USB). It is 7 fsk signals stacked
in frequency. They are 170 Hz shift and there
is 170 Hz between them. The Baud rate is 75.
All seven channels send the same bit stream
but offset in time by as much as 6.66 seconds.
The bits show a flat autocorrelation.
Anybody know what this is/ who is sending
it?

4024. WHY No Eton E1 AM/FM Shortwave Receiver with XM Satellite Tuner/Antenna Radio Module in Canada ? {For Now ?}

Newsgroup: rec.radio.shortwave
Date: 2005-12-28 08:06:37 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1135757197.647893.312940@g14g2000cwa.googlegroups.com>
Source record: 56184

For One and All,

It is my understanding that the Eton E1 AM/FM Shortwave Receiver
would be OK to sell in Canada by itself.

However - The New XM Satellite Tuner/Antenna Radio Module that
interfaces with the E1 is not "Type Accepted" product in Canada.

So there is the "Canadian Problem" and so the Eton E1 AM/FM
Shortwave Receiver with XM Satellite Tuner/Antenna Radio Module
is NOT Authorized 'For Sale' in Canada at this time.

Soon May Be - Just Not Right Now !

please - correct me if i am wrong - e1'ing you all ~ RHF

. . .
.
. .
.
. . . Out !

Go Here : To Find News and Information concerning the
Eton E1 (E1 XM) AM / FM and Shortwave World Band
Receiver with 'Optional' XM Satellite Radio.

0.015ufd 15kv non-polarized
Not impossible to find, though I only got one hit on the net googling
that value. They are about 3 inches long, 3/4inch round. The same shop
that had the neon light power supplies had the caps. It just wasn't the
first place I looked.

Much like the capacitors that go into speaker networks, I think they
make a large run of these things and sit on the inventory. So they are
cheap, generally, but near the end of the run, they are hard to find.
Nobody wants these big ass caps in modern electronics due to the size.

http://www.pupman.com/listarchives/1999/November/msg00275.html for the
google hit.

I did a circuit that needed an ultra low leakage capacitor. The cap was
nearly the same size as this 15kv beast. The thing looked laughable
next to the 8 pin dip. That particular cap was polystyrene. They are
popular in high end audio.

There's a lot of odd stuff around, although it's not always easy to find:

http://fairradio.com/dchvca.htm

1600V caps are pretty common, although I suppose the ESR might get too high
in a series string.

4029. World Service UK Reception

Newsgroup: rec.radio.shortwave
Date: 2005-12-28 10:47:07 UTC
From: Henry <dotdotuk@nospamhotmail.com>
Message-ID: <43b26d35$0$27183$ed2619ec@ptn-nntp-reader02.plus.net>
Source record: 56189

I live in the North East of England and I have dabbled a bit with a poor 20GBP receiver (it was a gift!).

When on Holiday in Portugal I got good reception of the BBC WS on various SW frequencies.

I have now bought a Roberts R9969. Actually this is the second as the first had a fault (the sound switched on and off whenever I touched the case!) I took it back to the shop and replaced it but I am not impressed with the SW reception on the second set.

I have programmed the following frequencies into it for the WS but I do not get any signal at all despite trying it at various times of the day and evening;

6195
9410
12095
15485
13855

I thought I would try the American Forces Network and again got no reception at all on these frequencies;

7590
4319
5765
6350
7812
10320
12579

Is my area a black hole for SW or is it likely that this is another duff radio?

It's only the 80m ham band in the "Americas". In Deutchland it's a
shortwave broadcast band.

Technicly hams that try to operate on that frequency are at fault, not
DW. DW is operating legaly, and therefore they are obligated to keep off
the frequency.

No, bad operating practice is QRM, If DW broadcasts DRM on a frequency that
is legal for them to broadcast on, then hams trying to operate over it
are at fault. The 80m ham band ends at 3850kHz in most of the world.

Which one? With propigation the way it is, there won't be a decent single band until almost 2011.

U.S. hams are going to have to get over your "we own the world" ideas and pretty quickly at that. With the FCCs prediliction to BPL, there won't be a useable HF ham band in a few years.

What? First of all, they are operating outside of the ham bands. It's not
DW's fault that hams are allowed to operate over it's allocated frequencies
and don't bother to move.

As for being outside of the SW broadcast bands, where should they go?
3995kHz is exactly where they should be.

BS. 3995 would certainly be OK if it didn't propagate over here!

At any rate, DRM is busy chewing up other bands as well.

DRM = QRM

So take your DRM and stick it where the sun don't shine.

BPL will give you cancer!
BPL will kill you!

BPL will burst the small capallaries in your body, and you will bleed from your eyes!!

At least, this is what a caller to Joyce & Dave's Power Hour is saying. He claims to be VERY well informed about what the Globalists are up to. BPL, as he puts it, is an electric fence for people. The upcoming "bird flu epidemic" will actually have been the murder of thousands of people by BPL.

And it's not like the caller can't back up his claim. As proof, he says the Globalists have the fix in for the Super Bowl. This year it's Pittsburgh.

So place your bets.

Frank replied:
>DRM noise may be no worse than other sources of interference were, but there
>is no longer any justification for such interference. There's plenty of
>open spectrum now. <->

I reply to Frank:
No the case is absolutely the opposite. Spectrum space is much more
costly and less available than it was. The DRM'ers are using
absolutely legal, internationally allocated frequencies for their
transmissions. There is no legal or technical reason for them to
change their frequencies.

Frank wrote:

>Satellite radio is an even better solution from the reliability and real
>estate point of view.
>
>DRM is an attempt to compete with satellite radio. ->snip<-

I reply:

Granted that satellite radio is a much better form of shortwave
broadcast transmission -- that's what I said in my last post! Read it
again: "It is questionable as to whether DRM will ever become viable
due to shortwave's unpredictablility and the high cost of real estate
necessary for broadcast of shortwave signals". I will also add that
the environmental impact from a 200 kW shortwave broadcast transmitter
is much greater than that of a satellite uplinker.

As to your argument that SWL'ers enjoy the unpredictability of
shortwave, I've been at it for many years and have logged and verified
thousands of commercial, utility, and ham contacts. DRM DX'ing is
another interesting challenge to the hobbyist.

I'll quote myself:

"The DRMers ought to arrange their tests outside the ham
and SW broadcast bands."

3995 kHz is in a SW broadcast band outside the Americas. And, to continue
with the obvious, there's no reason for DRM interference to be in either SW
broadcast bands or ham bands.

>
> As for being outside of the SW broadcast bands, where should they go?

Several AM stations manage OK with out of band operation. They found open
frequencies. It sure sounds like there's plenty more to go around.

>So you don't put high Z signal into a lower-Z cable. Major faux pas.
>500 Ohms is assumed to be about the max for a wire antenna, no?

It can be much higher. Looking at the book "Wire Antennas" by William Cowan, W6SAI, and his chapter on end fed wires:

"In the case of a random length, end-fed antenna, the radiation resistance at the feed point can vary over a large range, depending on the operating frequency and the actual length of the antenna. The measured radiation resistance can be as high as 5000 ohms or as low as 2 or 3 ohms..."

That's why I wonder about the popularity of these 9-to-1 baluns.

One of my antennas is a 20 meter end fed wire, and I tune it with an old Heathkit AC-1 antenna tuner, which is made especially for random length, end fed wires. A modern equivalent would be something like the MFJ-16010 random wire tuner, which at $49.95 doesn't cost much more than some of the 9-1 baluns I see advertised :-)

It would require bringing the random wire into your residence, and then running a short length of coax from the tuner to the receiver. I understand some wouldn't like that because of in-house noise, but there are always trade-offs to anything.

Message-ID: <slrndr59gd.j8i.gsm@cable.mendelson.com>
Source record: 56057

dxAce wrote:
> BS. 3995 would certainly be OK if it didn't propagate over here!

Based upon your logic, you should stop your digital ham transmissions
in the class B (general) allocation on 40m (7050-7100).

How about those SSTV transmissions that kill 14.220-14.230 and beyond?
They may have "enhanced the radio art" in the mid '60s but now they
are just anoying and take up a lot of bandwidth that could be used by
other people if one or two hams wouldn't transmit on it 24/7 without
listening to see if someone else is there.

> So take your DRM and stick it where the sun don't shine.

You should come over here and try to operate on 80 and 40m. It would
give you some appreciation for how bad things are due to people who
don't care about others on the air.

BTW, do you actually have a name and a ham license?

Geoff.

Absolutely the opposite? Please tell me which of these points are wrong:

1) The great transmitting stations with huge antenna farms which moved
thousands of messages across continents and oceans are now almost entirely
gone.

2) The news services are largely off shortwave.

3)Most military and diplomatic traffic is now carried off shortwave.

4) Shortwave broadcasters are reducing the number of hours they broadcast.

5) Several international broadcasters have dropped shortwave entirely.

I hear much less activity on shortwave than I did back in the 70s,
especially outside the SW broadcast and amateur bands. I'll admit I don't
keep detailed records of such things, but I really do think I'm correct.

Please detail just how SW spectrum has become less available and more costly
than it was.

>The DRM'ers are using
> absolutely legal, internationally allocated frequencies for their
> transmissions. There is no legal or technical reason for them to
> change their frequencies.

I never suggested the DRMers were lawbreakers. Not that that would much of a point, because SW law isn't often enforced on an international level.

There is a good technical reason why DRM broadcasts should be segregated. DRM does cause more interference, despite using the same channel width as what's allocated to a standard broadcaster. DRM sounds like it has an even distribution of energy across it's bandwidth, which means it has much more energy 1 kHz or so off the carrier than a standard AM signal.

Great. Let the DRM broadcasters play with of the frequencies RCA and AT&T aren't using anymore.

Is there a detailed description, with possible diagrams, explaining how to strip, connect coax and a random wire... i.e. no balun, direct random wire to coax connection (coax leading into tuner after that)

Henry,
I also am in NE England, it certainly isn't a black hole for RF!
Suggest you consider an external antenna for better reception but any
reasonable portable should pick up any of the major SW broadcasters
depending on propagation of course!

I am about 40 miles from the Soo and can hear CIRS 530, the Bridge
low-power transmitter giving tourist information. Also the Mackinac
Bridge traffic radio comes in well, usually both at once. You may hear
them at times. there are a lot of interesting low-power college and
community stations on 530 bu it is rare to hear them.

But not here and their signal propagates VERY well here. I'd almost say that they
are in violation of the rules in that regard.

At any rate, a stupid method of transmission that renders 10 kHz unusable is not
a very good idea!

How many times do people have to say this? This is a simple UNMODERATED newsgroup. Nothing you do will change what's posted here and posting your dissatisfaction is pointless. Only time affects who comes and goes. Might as well join in with the rest of them and use killfiles if necessary... or check back in another year to see if things have changed. There's always great info available here if you don't mind weeding through a few off topic posts, but for some reason many folks don't like moving their mouse around a little to read them.

Source record: 56077

http://edition.cnn.com/2005/WORLD/americas/12/27/canada.crime.ap/index.html
"It's a sign that the lack of gun laws in the U.S. is allowing guns to flood across the border that are literally being used to kill people in the streets of Toronto," Miller said."

Lack of gun laws in the US? You mean the 20,000 we already have isnt enough? Toronto Mayor Miller is clueless.

The PM is equally clueless

"The escalating violence prompted the prime minister to announce earlier this month that if re-elected on January 23, his government would ban handguns. With severe restrictions already in place against handgun ownership, many criticized the announcement as politics."
This has worked well in D.C.

This guy gets it.

John Thompson, a security analyst with the Toronto-based Mackenzie Institute, says the number of guns smuggled from the United States is a problem, but that Canada has a gang problem -- not a gun problem -- and that Canada should stop pointing the finger at the United States.

"It's a cop out. It's an easy way of looking at one symptom rather than addressing a whole disease," Thompson said.

''EEB owner sentenced for fraud: The Fairfax Journal reports that the
owner of the now-defunct Electronic Equipment Bank in Vienna,
Virginia, Richard F. Robinson, K4EIH, has been sentenced to four
months in jail and four months home detention for fraud. The Journal
report by Ellen Sorokin says that Robinson, 68, pleaded guilty last
December for conspiring to submit false invoices to the Drug
Enforcement Administration in 1995. Robinson also was ordered by US
District Court Judge Leonie M. Brinkema to pay $52,100 in fines and
restitution. Robinson pleaded guilty in December to one count of
conspiracy to submit false invoices to the DEA in August 1995. The
sentencing was February 19. Federal authorities say in documents filed
in US District Court that Robinson conspired with Robert Burchell, a
telecommunications specialist at the DEA's Northern Virginia
headquarters. Court documents say Robinson was indicted on charges he
submitted two bogus invoices to the federal agency totaling $50,000
for batteries used in DEA radios, but the batteries never were
delivered. Robinson received payment for the nonexistent batteries and
kept an estimated $12,000 for his efforts, authorities said in the
court documents, but Burchell instructed him to pay the rest of the
money to third parties. Authorities said the third-party payments
actually were for Burchell's personal benefit. Burchell was sentenced
to four years in prison last October. ''

3995 is even a broadcasting-band in some part of region II. Greenland
has assigned 3950 - 4000 to broadcasting on a primary basis. And a
number of countries in America Latina do not allow ham applications
above 3750 neither.
Canada had an assignement for broadcasting (on a primary basis) between
3950 and 4000 but that one seams to have disappeared.

What is the status of ham in 3800-4000 in the US? Primary or secundairy?
3750 to 4000 is a shared band with fixed and mobile (except auronautical
mobile) anyway; so it's no PEX usage!

It just renders it very usefull. It means that that 10 Khz is used to
transport a radio-signal from the broadcaster to the receiver. That's
what broadcasting is for isn't it?

What else is radio-spectrum for? Just to leave it empty and unused?

4084. Informacion Pirata de 6925 kHz Christmas Eve, dig?

Newsgroup: rec.radio.shortwave
Date: 2005-12-28 21:08:59 UTC
From: Darkington 'Starsky' Starr <dark_star_radio73@yahooEY.com>
Message-ID: <mkv5r1ltdnfti6vm2h3bmj9kmjacuufmgs@4ax.com>
Source record: 56094

Hello everyone,

Gads, it's been ages since I've been here on USENET. I guess radio has taken priority over the 'net... to totally paraphrase/alter some movie line, (Blazing Saddles?) "We don't need no stinkin' Internet!" Radio is so much more fun. But, you already know that. This computer-thingy is just a tool. Radio Rules.

Anyway, I am a pirate radio fan, and have been for over 20 years now. Somewhere packed away in my radio memorabilia from yesteryear are QSL cards from pirate stations that were on the air back in the '80's. I seem to recall that the main pirate HF frequency back then was what is now WBCQ's 41 meter frequency: 7415 kHz. Or is my old brain too far fried to remember that far back? But I do remember it was far out.

To the subject of this post: on Christmas Eve I heard some station identifying itself as "Station Sierra Papa" making brief announcements following some really excellent pirate broadcasts. And I mean excellent. Cool tunage. Cool announcers. Man, it was just like the "good old days". Anyhoooo, Station SP was promoting 2-way communication between pirate station operators and anyone interested in outlaw radio in general, it seemed. Being the Radio Outlaw aficionado that I am, I couldn't resist writing down the frequencies he suggested: 13.555 MHz USB, 6.670 MHz LSB, and 3.475 MHz LSB. Just in case, ya know.

Well, last night... actually earlier today UTC, my wife and I were finishing up supper and I had the 6 MHz frequency on the '706 MKII and had the MFJ tuner all set up with my 40 meter dipole just in case someone would happen to call CQ or something. Lo and behold, I heard someone! "Did you just hear a station calling someone?", I asked my wife. "Yeah, I think so.", she replied. So I mozy'ed over to the rig and grabbed the mic. "QRZ? Is there a station on this frequency?" Nothing. So, I tried again. "QRZ? This is Dark Star Radio73, is there someone on this frequency?" Much to my delight, XM562, Duke, in Ontario, Canada came back to me. Signals were iffy at first, but the band began to favor us (I'm in southern-central U.S.A.) and shortly the signals were peaking well over S9, with each of us running 100 watts. Fun stuff! Duke said he was going to post information about the QSO on the FRN. What's that?

So here's the deal: y'all pirates wanna do a little 2-way radio fun? I've heard that there are some 2-way conversations taking place on a couple of the more well-known pirate broadcast frequencies, which is cool. You know; no rules, etc. But wouldn't it be better to keep the pirate broadcast frequencies open for broadcasts and have the 2-way

pirates and radio outlaws use other frequencies to chit chat? Just a thought.

Suggestions? Thoughts? Spacey contemplations?

73 de Starsky -- Dark Star Radio73

Listening U.S.A. daytime: 13.555 MHz USB
Listening U.S.A. evenings: 6.670 MHz LSB
Listening U.S.A. nights: 3.475 MHz LSB
All above monitoring subject to propagation variations.
(And when I'm not elsewhere in the HF spectrum doing other things. .... ..)

Gegroet,

Frank Dresser schreef:
> Satellite radio is an even better solution from the reliability and real
> estate point of view.

But it's not a good solution from "independance" point of view. It's not very hard to image what would happen if IRIB (the Iranian state-broadcaster) would ask worldspace for a place on their system? (to take just a random example). Would XM or Sirius be allowed to sell a channel to (say) CRI?

Shortwave allows a country to broadcast to almost the whole world, directly from its own soil, without the "agreement" of the satellite-operator and the gouvernement or the country that provides their licence.

...using guns from Virginia. This is why the "gun a month" law was
passed.

You really can't have gun control until there is a nationwide standard.
I do laugh at how thus far the only administration ever to yank guns
from ordinary citizens was Shrub's. The feds took guns from private
citizens in New Orleans, but allowed the contractors (as in hired guns)
to be packing. I guess the ordinary citizens didn't make enough
campaign contributions.

Anyone remember those asshole that said Clinton was a gun grabber? They
sure look stupid now. Bush steals your guns and taps your phones.

Message-ID: <305e7$43b30c05$8b371619$5920@ALLTEL.NET>
Source record: 56097

Would a vertical antenna such as the Hustler 6BTV operate (Transmit and Recieve) well on a ground mount in the middle of a concrete parking lot if the concrete contained a lot of the concrete reinforcing wire? The parking lot is next to a large lake as well and the ground stays pretty wet most of the time.

JR

Gun controls have nothing to do with stopping crime. They only affect
law-abiding citizens. The Clinton gun ban did nothing to stop crime either.
And that "one gun a month" law in Virginia has done nothing to stop the gun
crimes in DC. It's the criminals stupid.

I do agree that the gun grab in NO was wrong.

4089. Re: New Palstar receiver in 2006

Something must be in the works. R30 will have a sibling soon,
one with a keypad and an even higher 3rd order intercept. When it
arrives is unknown at this time, but it seems Palstar is capable to
challenge 7030 Plus. Let us hope it will be under 1K.

Au contraire. The most notable traitor these days is the New York Times,
printing classified information which aids the enemies of the USA.
Like it or not, even the leftist Congresscritters who were in on the
thing from the beginning have to admit that the President has the
authority to do what he's doing.

I didn't mean to imply that you didn't have the skills to build a
basic transmitter and receiver, it's just that it's almost impossible
to get the parts. There are a few companies that offer kits. Maybe that
is the place to start. Refurbishing an old ebay special would teach you
a lot without the major hassle of finding parts and designing a rig
around them.

My guess is that the antenna would work better than one with no radials but poorer than one with proper radials. The only answer is to try it and quickly before a car runs over it. I wonder at the effect of no radial being at the correct length and the possibility of harmonic generation caused by the reinforcing wires. Note that broadcasting stations tend to use 180 quarter wave radials spaced at 2 degrees to get maximum efficiency. If you could somehow lay 8 quarter wave radials on the ground it would give you a basis for comparison.

Concrete reinforcement wire looks sort of like square section fence wire.Of course,the wire helps to hold the concrete together and helps keep the concrete from cracking.

If war gives the president sweeping powers then a bad president would
probably see to it that we're always at war.

You cannot trust these people. That is a basic tenet of the American
form of government.

4108. Sony ICF-SW100s geeks: This thread is for you!

Newsgroup: rec.radio.shortwave
Date: 2005-12-29 02:03:00 UTC
From: Flashman <Flashman.20s7iu@news.radiobanter.com>
Message-ID: <Flashman.20s7iu@news.radiobanter.com>
Source record: 56227

Hello Everyone,

I understand that the icf-sw100s has a problem with the clamshell lid/ribbon cable. Sony apparently corrected the problem in October of '97.

My questions:

1) Is it possible to identify a pre-revision unit by serial number alone? Corollary: is there a "birthdate" sticker on Sony products that details exactly when a particular unit left the factory? If it's any help, the unit I was looking at had a serial number of 27180.

2) Is there still a vendor for the repair kits that Sony offered?

Part no. = X-3372-340-1
Desc. = kit mcb, flexible

I poked around the Sony site a bit: nothing. I'm assuming the kits are long out of stock, but please do tell me if there's a vendor that still stocks these.

Finally, is there a vendor left with *new* stocks of these radios? I know I'm really reaching here, but might there be a warehouse in Nebraska with a few of these laying around, collecting dust? I know it's not likely, but still... ?_?

If anyone has one of these for sale (post '97 revison _only_ please) do let me know. I can't promise anything, but tell me what you have, condition, price, and we'll go from there.

Well, I think that's everything. Any infomation or insights would be greatly appreciated.

Cheers,

Flash

What is the difference between the Degen 1103 which sells for about $55.00

and the Kaito 1103 which sells for around $109.00?

The radios look identical. They have the same very high rating on eham.net

The only difference I can see is that one costs twice as much as the other.

Is there something else I'm missing?

Just one of those things that make you go hummmm.

Basically its where the target audience is located. Both are the same inside and made by the same chinese factory. The Degen is made to sell primarily in asia to the home audience so to speak, the Kaito is marketed to the richer worldwide audience including the US and Canada.

Originally Degen didn't carry the same length warranty but that changed in the last year. Originally the Degen didn't have the US Charger but it too is available now.

Or so I've been told.

They are the same radio with different badges. The Kaito 1103 is distributed by US dealers and usually comes with a decent warranty... if it breaks, you don't have to ship it back to China. It also comes with an AC adapter for US mains. The Degen (China) version comes with one for Chinese mains, so you'd need to purchase a separate adapter that steps up to 220 volts from 110.

It's a quite ecent performing radio for the money.

A concrete pad is very close to being an excellent ground system. If
it has all the rebar welded together and a strap brought up for you to
connect to, it IS an excellent ground system, called a Ufer ground.

Concrete is a poor conductor, but there are a lot of paths for that
poor conductor to reach surrounding soil, which may even be a poorer
conductor. A Ufer ground takes advantage of that. IIRC, it was
invented in WWII for keeping quonset huts filled with ammo from
blowing up from static discharge. Turns out it makes a good RF and a
good lightning system ground.

If I ever have a house built, I'll make sure it has a Ufer ground, so
I don't have to deal with ground rods and radials.

etc., etc.

Okay, guys, Tin Foil Hat Mode Off...

Not to appear as Sir Doyle the Dense or anything, (too late!) but I actually learned of BPL and its effects on Shortwave just this morning. According to PtWBR, BPL *does* interfere with ("jam" if you like) shortwave signals. And according to PtWBR the Feds, supposedly, are keen on the idea of BPL ("supposedly").

In a macabre way, it's fascinating that a medium that is relatively hard to jam/comtrol (shortwave) can be hampered by a medium that's (comparatively) easier to control. Granted, according to "Passport." the interference can be countered with good antenna placement. Still, it makes one wonder...

Just call me "Jiffy Pop!"

You could buy an antenna switch from Universal.
<http://www.universal-radio.com/catalog/switch.html>

You could combine the two antenna outputs to one output into the radio.
The problem with this is you create a vector sum of the two antennas and
depending on how that works out some signals will get a big boost, take
a big hit or end up somewhere in between the two extremes.

Just for laughs Clifto, join me in a little thought experiment. A "Liberal" media would naturally give Democrats the benefit of the doubt, cut them slack at every oppurtunity, and hammer the Republicans relentlessly. Goes without saying right? Let's look at two examples.
1. Whitewater. Lifelong Republican, Robert Fisk spends nearly a year and ablout 5 mil. of your tax dollars investigating. Finds nothing worthy of prosecution. Knowing good PR, the Repubs continue the investigation with Ken Starr at the helm for another, what, another 4 yrs. and 40 mil? For 5 yrs. your "far-left extremist media" reported every rumour, lie and unsourced allegation the Repubs can come up with to slander Clinton on a near daily basis. When the report on the investigation was finally released the word "cigar" appeared more often than Whitewater! Nothing there. If it weren't for Monica it wouldn't have been worth reading.
2. Jeff Gannon. Who? You know, the male prostitute who for a year and a half, posed as a fake reporter from a fake news agency to ask fake questions at White House press conferences. Who, according to Secret Service logs often visited the White House when no press conferences were scheduled, and on about 15 occasions signed in but didn't sign out, possibly spending the night (!) Who never had to undrgo a background check even though legit reporters had to before they were allowed through the White House gates. THAT Jeff Gannon. How long did the Liberal Media hammer our boy George on this? Maybe 2 days. Gently. Google him up if you missed it. If this had happened while Clinton was in office we'd have never heard the end of it. Pigboy Limbaugh would be selling Jeff Gannon t-shirts, (complete with tasteful nude photos from Jeff's own websites,) in sizes from newborn on up to 4x-tra fat.
So next time when you reflexively start to describe the media as "liberal," perhaps you'll pause for a moments honest reflection. Nah, too much effort I'll bet.

I wish it was true that you could counter BPL interference with antenna
placement. Well maybe if you move the antenna to the next county.

Interesting. What program did you use to produced that spectrogram?
I use Digipan for live monitoring and Matlab for analysis.
I use gram sometimes too. It has some nice features but
also some peculiarities.

Does it let you adjust the FFT size.
A shorter FFT gives better time resolution at the
expense of frequency resolution.
A longer FFT gives better frequency resolution at
the expense of time resolution.
But you probably knew that already.

I don't think there'd be any problem if XM or Sirius wanted to make a broadcast deal with the Chinese. Radio Moscow tried to get some US stations to broadcast their programming back about 25 years ago and at least one station accecpted the deal.

Radio Havana might be different. The US State Department probably wouldn't care, except the anti-Castro exiles have both a knee-jerk reaction to anything Castro wants and a good deal of political power.

>

That's a very good point. However, such propaganda radio will be broadcast in AM until nearly everyone in the target country has a DRM radio. Also, it's entirely possible that direct satellite broadcast will become much easier and more common in the future. Direct satellite propaganda broadcasts would become a good choice if nearly everyone in a target country has a satellite receiver. Or they might even be able to put up a satellite which could directly broadcast on the existing FM or TV bands.

Well, it's true enough that Kennedy and Johnson tried, but Nixon stopped them. But the "sweeping" powers in question are not granted only by the existence of a war. Several liberal Congresscritters agree that the President has them regardless.

A good place to buy any Degen Radio is from lipyn - here's a direct link to the offering of the Degen 1103 - http://cgi.ebay.com/NIB-DE1103-SSB-SHORTWAVE-FM-LW-MW-RADIO-DEGEN_W0QQitemZ5847872216QQcategoryZ15051QQcmdZViewItem

It looks like the total with shipping and the 110v adapter would be about $72.80. The only difference between the Degen and the Kaito is the hassle you would have to go through to get any warranty work done. They are both made at the same facility, and otherwise are the same product.

I've ordered a Degen 1105 and a Degen DE-31 Active Loop Antenna from Liypn, and have been very happy with the transaction, plus both items arrives 3-4 days ahead of schedule. I also have a Kaito 1102 that I bought from a dealer north of St. Paul, MN, but I paid twice for that what you would for an 1103 from liypn. The 1102 is a wonderful radio, but has drawbacks if you like to use SSB a lot (only works on page 9, but that's not a problem with the 1103).

In addition, you wouldn't necessarily need to order the 220/110 adapter initially. I use 2500mah NiMH rechargeable on all my portables and they work great, plus I don't have to deal with excess Radio Frequency Interference (RFI) that is produced by some wall plug in's. The only problem that you'll run into with using NiMH batteries is if you have a batter hog, like my Sangean Super 909. I made an external battery pack for that one, but that won't be the case with a Degen 1103.

Hope some of this information has helped! I wouldn't hesitate to go with a Degen.

I'm no longer hearing the IBOC sidebands as I tune past WBBM and WSCR. Have other CBS/Infinity stations also turned off the IBOC noise?

WIND has dropped IBOC. Aside from the Clear Channel stations, it doesn't seem like there's much commitment to IBOC-AM, at least in Chicago.

The best way to block BPL from you home is to place .01uf caps between
your mains and ground after the meter on YOUR wiring. Unfortunately, this
will have the side effect of muting BPL in the whole neighborhood.

I can live with that

That doesn't work. Most electronic plug-in gadgets have exactly that sort
of bypassing. Yet that bypassing hardly stops BPL in the homes where BPL is
currently working, and it certainly isn't making the BPL neighborhoods
quiet.

That's right. It's not like the BPL noise will be coming from a single
point source which could be nulled out. The noise will be radiated from the
power lines and will be coming from every direction.

However, we can hope that the alternatives to BPL continue to get better and
cheaper. Or maybe I need to dip my radio in Miracle-2. I'm sure Joyce and
Dave will clue me in.

I hadn't realized it, but soundforge rev 6 has a spectrogram feature.
I'm pretty sure that rev 6 is old, but the good news is Sony bought the
company the software is considerably cheaper.

I don't believe there is anyway to change the size of the FFT.
However, I changed the scale and color scheme to do a decent job on the
data.

http://www.sonymediasoftware.com/products/soundforgefamily.asp

According to the list, you need to get the full version for spectral
analysis. At this point in time, it's probably not worth it unless you
can find an old rev. There is plenty of open source audio software.

Nope, this is because the bypass only effects certain frequencies that
happen to be the proper ones for the capacitors and the wiring from the pole
pig to the place you put the capacitors.

In addition, the pole pig would block your trap from affecting anyone else
on the line.

Yeah, that's been my expirence, so I didn't think much when I didn't hear
the noise. IBOC started intermittently on the two CBS stations here, but
had run continously during the daytime for maybe a couple of months. I
don't think I've heard the sidbands on either station for about 3 weeks.

Clear Channel's AM stations in Chicago continue to use IBOC.

Some, not many but some, people should be using the service. There were a
few rather expensive IBOC receivers introduced this year. IBOC was supposed
to be building momentum now.

It seems curious that a couple of big time clears have turned off the IBOC
sidebands during the Christmas season.

For One and All,

On FM KDFC in the SF Bay Area was running IBOC
http://www.kdfc.com/new/home_flash.cfm
http://www.ibiquity.com/press/pr/061903.htm
- Owned by Bonneville International Corp.

KDFC is proud to be the first station in the world broadcasting in (HD)
digital radio, with twice the fidelity of satellite radio.
- by Paul Black, KDFC Engineering Department
http://www.kdfc.com/new/hd.cfm
The HD Radio signal is called an "In Band, On Channel" (IBOC) signal.

To me IBOC makes Sound Sense and Good Business Cents
for FM Stereo Radio - But for AM Talk Radio ? ? ? ? ? ? ? ?

Long, winding road ahead for digital radio
More stations are broadcasting it,
but few listeners own receivers that can get better signal
- by Benny Evangelista

IBOC is digital (sort of) compatible radio. It stands for In Band On Channel. The system uses a digitally modulated carrier attached to the main carrier of an AM or FM station. In theory, it allows the two signals to co-exist on the same frequency. In practice, it fails miserably. One of the biggest engineering problems with IBOC on the AM band is adjacent channel interference from the digital signal. During the daytime, they just ignore it (the attitude of the stations using it is that they don't care if their digital sidebands interfere with the reception of a non-local station). It's currently not allowed to run IBOC on AM at night due to severe interference issues. FM IBOC is a headache as far as trying to receive rimshot stations on first and second adjacent channels.

That's easy. Cut off about 3 or 4 inches of the outer black jacket.
Then use small scissors to split the exposed braid, and cut it off.
Then use a razor blade, box cutter, exacto knife or some other sharp
instrument to peel the plastic insulation off the wire center
conductor. Then take that exposed wire and twist it to your random
wire antenna. Make sure the connection is strong mechanically and
won't work loose.

An antenna tuner will still work better than the balun at impedance
transformation because the tuner is variable and can be peaked
precisely for each listening frequency. The balun is good for one
impedance, and one impedance only, so it's effectiveness is a crap
shoot, since the average listener has no earthly idea what the
antenna's impedance really is.

9-1 baluns mainly benefit the people who charge $29.95 an $39.95 and
up for them...

$17.50?

I've used both (tuners and passive matching). Tuners are more trouble
than they're worth, IMHO.

jon wrote:
> Pardon me for my ignorance but what is IBOC? I will never know without

IBOC = "In Band On Channel". A system for transmitting digital radio "on the same frequency" as the station's analog signal. Also known as "HD Radio".

In quotes, because actually adjacent frequencies are used. For FM IBOC the digital signal uses about half of each adjacent frequency. (for example, if a station on 93.1MHz uses IBOC their digital signal stretches down to about 92.95 and up to about 93.25, using half of the 92.9 and 93.3 channels.)

For AM IBOC it uses all of the first adjacent and half of the second. WLAC-1510's IBOC stretches down to 1495 and up to 1525.

As you might imagine, severe interference results. On FM, the theory is that this interference happens in areas beyond the "primary coverage" of the station -- that *officially*, you can't get the station in places where someone else's IBOC is interfering with it. The FCC's definition of a station's coverage area is far too pessimistic for good radios (like car radios). [0]

AM stations are currently allowed to operate IBOC only between 6am and 6pm, due to the severe interference that would be caused by running it at night. IBOC proponents are suggesting that the FCC stop protecting the nighttime skywave coverage areas of clear-channel AM stations. That would allow stations to run their IBOC all night. It would also mean that millions of Americans in less-heavily-populated areas would lose all nighttime AM service. (if IBOC-AM were fully deployed, I would receive *ONE* AM station at night - WSM. 100 miles west of here, the count would be *ZERO*. West Tennessee may not be Manhattan, but it's not an unpopulated empty desert either...)

IBOC is unique to the United States. The rest of the world - including Canada - has adopted a system called "Eureka", which operates on its own VHF/UHF frequencies and doesn't interfere with existing service.

Eureka offers every station in a city identical coverage. I'm pretty sure IBOC was invented mostly to prevent the adoption of Eureka in the U.S., and the resulting ability of low-power, AM, and daytime-only stations to develop a full-fidelity, full-time signal able to compete with the high-powered FMs.

I think you will like it a lot. Both portables are good ones.

I think you will like the keypad layout and the traditional volume control. After 1+ yrs of the 1103 (which I have come to appreciate more), I still find the awkward volume control set up to take away from the fun of using it.

I thought the lack of tuning knob might be hard to get used to on the 7600g(r) but it wasn't for me. There are two pairs of up/down keys depending how much "territory" you want to move.

Both are quite good on sideband. There are times when the synch detect of the 7600g(r) will make a difference on AM.

You've got yourself two good travel sized portables.

1. I have not seen any information on how to tell if the radio is a
revised version base on serial number. Others may know more.....

You can tell if a radio has a new clamshell just from it's appearance.
See my post on this newsgroup dated Sept 12, 2005. This does not tell
you if were supplied from the factory, or changed by the owner.

2. You can still get the kit from Sony. Go to
http://servicesales.sel.sony.com/web/index.jsp
and search by part number.

You can also get the part from www.partstore.com

3. The ICF-SW100S was the version sold with the active antenna. In
Europe it was sold as the ICF-SW100E, but without the active antenna.
This version is still available from eg
www.askelectronics.co.uk
but note that it is not cheap.

4. Other information: There is a yahoo group for this radio at:
http://groups.yahoo.com/group/SonyICF-sw100

My pet IBOC theory is that the push for it comes from the desire to
broadcast independent channels from the sidebands. Two or three programs
from the same license.

My old 80s era Sony Walkman is actually a decent AM dxer. I normally will
pick up the all usual nighttime clear channel frequencies off the internal
ferrite antenna.

The current adaptation allows one analog and two digital signals, one of
which has the same content of the analog signal.

AM IBOC only allows one digital signal, in parallel withthe analog signal.

Only on AM. On FM the analog system suffers no degradation.

I'd be curious if RM would be up to having
someone show up to pick up the radio he's
selling. That way the purchaser can check
out the radio right then and there.

I'm sure that you will find it to be a fine performing radio that will allow you to hear much the same stations you found on the DE1103. I was fortunate enough to own the original model from that long running series, the ICF2002 and that radio gave me many years of enjoyment. Indeed the up/down tuning buttons finally died from overuse.

Most radios have at least one wart and the only shortcoming of the 7600 that comes to mind is tuning with up/down buttons. They are not as effective as a simple tuning knob for the start/stop/back/forward tuning many of us do. As with the single row frequency entry keys of the DE1103 one can learn to use tuning buttons on the 7600.

Bob [K5QWG] - I would say it a little differently :

1. Cut off about 3 or 4 inches of the outer black jacket.

2. Use a small Ale to pick open a Hole in the Weave of the Wire
Braided Shield.

3. Carefully use the Ale to Manipulate the Inner Insualtion and
Conductor through the Hole.

4. Smooth-Out the Wire Braided Shield and Twist it in to a Pig Tail.

5. Then use a razor blade, box cutter, exacto knife or some other
sharp instrument to peel about One to Two Inches of the plastic
insulation off the wire center conductor.

6. Then take that exposed wire and twist it to your Wire Antenna
Element. Make sure the connection is strong mechanically and won't
work loose. Tip - Soldering makes for a good Electrical and Mechanical
Connection. Tape-Over-Seal the Connection.

7. Install a Ground Rod with Ground Radial Wires.

(8). Connect the Coax Cables Wire Braided Shield {Pig Tail} to the
Ground Rod. Tape-Over-Seal the Connection.
Remember - You Are Always Behind The Eight Ball With Out A Ground
Connection.

That method of connecting is lame. You'll likely get no advantage
over running the wire straight to your receiver.

Now that is indeed an ambitious headline: Radio Mart takes over Ebay.

Given the current Ebay market capitalization that's quite a chunk of
cash for one person to come up with don't you think? Possible I
suppose, but the WSJ hasn't said a thing about it, and I'm sure the SEC
will be interested too.

Or maybe you were trying to say that Radio Mart took over the
management of Ebay. That of course will come as a complete
post-holiday surprise to Meg Whitman and the Ebay board.

What are you saying anyway.

One major function of the Legislative branch is oversight of the
Executive branch.

What we have these days is a rubber stamp. No checks and balances.

The People cannot elect representatives correctly unless the People
get solid information from the mass media. The mass media, being
ratrings driven, is reluctant to tell the people that the people are
stupid.

It ain't working. It is broken.

You can't beat knobs for ON/OFF/Volume and Tuning in stations.Buttons do make electrical contact and they (some of them) will eventually stop working.Auto parts stores sell electrical contact repair kits that are intended for repairing the electric contacts for defroster wires in the windows.The repair kits will also work for repairing the contacts in keyboards,hand held remotes and push buttons on radios.

You can buy rigid plastic water pipes at home improvement stores (ten foot long lenghts,about two dollars and forty cents) and plumbing supply stores.Get some pipes that fit inside of each other and some glue on adapters of the right sizes and screw the pipes together and make antenna mast.

Gun control does not work. Washington, DC has the highest crime rate in
the nation and you are not even allowed to own a hand gun, go figure!

And as far a Canada is concerned they are a bunch of pussies who
counld not accept responsiblity for anything, and their PM is a flaming
queer.

Good review of the E1. I was surprised to learn that it didn't use a
ferrite rod antenna for MW. Does the whip give any directionality?

Now this news flash from our "Believe It or Don't!" department...

An article in column 4 , front page (A1) of the December 29, 2005 Wall Street Journal:

Our gummint is soliciting funds/donations from private citizens to rebuild Iraq...

...as if the *SIX BILLION (!) DOLLARS A MONTH* out of our pockets wasn't enough. And, say, whatever happened to that promise that "the money from the oil will rebuild Iraq" ???

For those of you who were wise enough to vote for the president, be wise enough to heed your gummint's plea for contributions. Please, be generous, dig deep in your pocket and send in your donation.

if you go to www.radiointel.com and hit the review tabs....there is an 1103 review (which i need to update). also a comparison review (called the Great Debate) between the 909, 7600g and 400PE. In 2006, I intend to update that one as well to include the 1103 and 1102 which were not out then. Lots of other radios to read about.

All the stuff at radiointel should satisfy your shortwave/radio appetite for hours - maybe days!

Have a lucky new year-

73, the wavetrapper

>2 or 3 ohms..."

yep..

>That's why I wonder about the popularity of these 9-to-1 baluns.

generally a waste of money I think... Some bands they might
help, some might hurt... The reason I think it's a waste of time
is rarely are they actually needed to improve the s/n ratio.

>One of my antennas is a 20 meter end fed wire, and I tune it with an
>old Heathkit AC-1 antenna tuner, which is made especially for random
>length, end fed wires. A modern equivalent would be something like the
>MFJ-16010 random wire tuner, which at $49.95 doesn't cost much more
>than some of the 9-1 baluns I see advertised :-)

I've had one of those 16010's since about 1978. Still works, and I
usually use for a mobile impedance matcher. You can reverse the
leads if you want to match a low z load vs the normal high Z used
with most random wire tuners.

>It would require bringing the random wire into your residence, and
>then running a short length of coax from the tuner to the receiver. I
>understand some wouldn't like that because of in-house noise, but
>there are always trade-offs to anything.

Myself, giving that there is usually no increase in s/n ratio
when using a tuner to match a random wire, or other wire
antenna, I'd generally prefer a preselector over a tuner.
The tuner will help reduce out of band signals, but the
preselector will usually do a better job at that.
You can make a simple random wire tuner with a wound
coil that you can tap with a gator clip, and a variable cap.
The 16010 uses a wound tapped toroid inductor instead of the
coil, but otherwise is the same.
When listening on 160m with my IC 706mk2g, I sometimes
get AM-BC interference that puts images across the band.
We have a lot of strong MW stations in this town.
Using my MFJ-989c T match tuner will clean that stuff
right up. So even a tuner will act as a preselector of sorts.
MK

KCBS IBOC alive and well today.

Incidentally, IBOC leads to lower conventional AM quality on the IBOC station itself since they have to narrow the bandwidth of the analog signal.

I got a nice e-mail from Bernd apologizing for the necessity of a new system,
and having to re-apply for a password..

That was a welcome gesture and though I'll still have to get a new password
the next time data is released I felt his apology was sincere.

I use the ILG data every day in RLDB and GNPDB, so I'll put up with having
to fill out a form every so often and wait a few minutes for the password to arrive.

Of course I also use eibi.de.vu and primetimeshortwave.com data which is updated
more often.

Bernd's password hassles aren't a big deal to me, but I know they are frustrating
to many who post here.

Forget about biased reviews such as RadioIgnoritel.

You can review your Sony long after your Degen has bit the dust because Sony parts and service manuals are everywhere.

Just join the hundreds on the "7600GR" & "7600" at the Yahoo Groups.

If I bought that one I'd have to also buy InvisibleDollarsComingIn.com since I probably wouldn't be making to much money trying to sell Invisible Ham Antennas.

Just a thought.

Pentagon propaganda program orders soldiers to promote Iraq war while
home on leave

http://www.capitolhillblue.com/artman/publish/article_7918.shtml

Good soldiers follow orders and hundreds of American military men and
women returned to the United States on holiday leave this month with
orders to sell the Iraq war to a skeptical public.

The program, coordinated through a Pentagon operation dubbed
"Operation Homefront," ordered military personnel to give
interviews to their hometown newspapers, television stations and other
media outlets and praise the American war effort in Iraq.

Got one for the wife for christmas and had a hard time receiving signal at home so tried it in the office today with no luck either. It does work at home if you place the antenna 10' outside the house.

Anyone else having these issues? Have not tried it in the car yet but have to believe as many of these things I see on other car's it must work pretty good.

Dear "Lucky,"

You're going to HATE it. I bought a Sony ICF-SW7600G in 1998. It was so bad, I couldn't believe it, so in 2000, I bought another one, just to make sure. Then when they came out with the ICF-SW7600GR in 2001, I bought one. IT was so bad that, in 2002, I bought two more (just to make sure, you understand). Then, recently, Amazon offered them for $129.15 INCLUDING shipping so I ordered two MORE (naturally, to make sure these new ones were just as bad as all my others).

These radios are so terrible that I use them every day and take one of them with me on trips (just to make sure that they're as bad as I believe!).

;-)

Seriously, may I suggest that, if and when finances allow, you consider buying a Sony AN-LP1 antenna which will bring out the WORST in this radio!

Best,

Joe (My wife says I'm crazy; do you think she's right?)

Source record: 56294

Hello All.

The new WRTH 2006 edition arrived today. As usual, it is superb. I'm glad it arrived today as my 2005 edition is about worn out!

I recommend this book to EVERY serious (or even semi-serious) DXer. Sure I use the online services such as PrimeTimeShortwave, Eibi, HFCC, ILG (as well as WRTH's own site), but, in my opinion, they are only SUPPLEMENTS to the WRTH book.

In my opinion, the WRTH is indispensible.

I got it from Amazon for $19.77 (with free shipping as I ordered something else along with it).

Best,

Joe

The Degen 1103 and Kaito 1103 are identical radios, except one runs on 220 volts and the other on 120 volts.

On ebay, besides the reliable Lypin, another dealer sells both the Degen 1103 and the USA version.

http://stores.ebay.com/RADIO-AND-COMPONENT_W0QQssPageNameZviQ3asibQ3astoreviewQQtZkm

There is no difference in quality between the USA and foreign version.

Don't expect to much from it, Its certainly nowhere near as good as they say
it is, I doubt to be honest if you will notice much difference at all over
your degan 1103, except of course the Sony has sync detection (to a point)
its not very good. I sold my 7600gr on as i found the degan just as good to
use as a portable, and its smaller.

I think it is. I've been looking to buying a receiver and have seen a number of Icom R75's, JRC NRD-525's, and Drake R8's come and go in the last few weeks. Although there isn't an R8B listed, if you do a search for Drake R8 you'll find 2 R8's for sale right now. The price on one looks low, but remember most of the bidding seems to take place in the last hour of the auction. If you have an ebay logon you can search completed listings. An R8B sold there for $1,399 on 12/26. I don't know that much about the R8 series, and I'm wondering how they got twice the price of an R8, but they did.

In general, I've sold quite a bit of stuff on ebay (mostly motorcycle parts and knives) and have never had a problem with a buyer. I would advise having a paypal account, though, because most people who do business there use paypal. Good luck with your sale.

May I chime in from the broadcasters perspective? Most of what's been written is very accurate. The IBOC technology as implemented in the USA was developed by Ibiquity, Inc and is licensed under the name 'HD Radio'. Hence, if you're interested in purchasing a receiver to decode this technology, do a search for 'HD Radio'. To date, there are very few receivers available, largely due to standards resolution, and the long lead-time required by Detroit to implement new technologies into US made automobiles.

My sense is that radio Broadcasters, feeling the heat of competition from XM / Sirius / Ipods / Internet streams + WiFi, as well as the Eureka 147 digital radio roll-out in Europe (whereby all radio services emanate from a single point-source, and all have the same technical capabilities) felt the need to "do something digital". It had to be on the traditional AM/FM band because Broadcasters have paid a ton of money for each of their properties; to simply abandon the AM/FM scheme in order to implement 'digital' would have been financially devastating to station owners.

As has been discussed, HD Radio is not currently authorized on AM stations at night, ("night is *not* defined as 6 AM to 6 PM, but rather varies with a station's geographic location and the time of year) though a serious lobbying effort is on to change this. Hence, at this point it does not seriously impact DX opportunities, since most long-range reception is a nighttime phenomenon (when the IBOC signals are off).

Here in Los Angeles, we've implemented HD Radio on AM 1110, Radio Disney - a children's formatted music station. I would describe the aural result as "startling" - 14 kHz stereo, very low noise, no obviously noticable artifacts, no multi-path in an automotive environment - in short, it's *very* hard to believe you're hearing an AM station.

Compare this to a *typical* AM receiver (not necessarily a Drake R8B or Eton E1/XM) with a mono 3.5 kHz response and loud buzzes evey time you drive under a power line, and you can see the attractivness to the Broadcasting community. "Here, finally is a way to compete with new technologies" [programming issues aside!].

On the FM side, the aural improvement is much less noticeable. Since no pre-emphasis is required in the IBOC signal path, the high-end sounds more 'natural' and 'airy', but these are very subjective terms. What is new is the ability to "split" the IBOC bandwidth, such that station W*** - FM can now have 2 or 3 full fidelity "sister" or "associated" stations. This will provide FM broadcasters with the

opportunity to explore new (and hopefully more creative) programming opportunities.

Here in LA, about a half-dozen FM broadcasters have already implemented this "multiple channel" broadcasting, and most of these new channels are (for the time being) commercial free.

Too, there is a lot of talk about implementing 'surround' sound on IBOC FM, which also might prove to be a 'startling' addition to our radio experiences.

Again, my sense is that broadcasters are thinking that the analog technology that served us well in the 20th Century has run its course, and that to remain a viable medium a transition to digital *must* take place. The trouble is that there are (probably) a half-billion analog receivers in the USA alone capable of receiving analog AM / FM, and these can't be abandoned overnight. The Station's around the country are now in the first phase of implementing digital radio, in the form of IBOC / HD Radio. And my bet is that it's *not* going to go away.

Wow

I'm actually shocked to hear this in a way. Not shocked because the 1003 is excellent little portable. Kinda hard to get SSB audible if the signal is weak on it, but other then that it's a fantastic little gem.

But I am shocked you sold your Sony.
I always heard such high acclaims about the 7600GR. So, I just received my Amazon/Chase credit card and Amazon had it for $135.99 and free shipping last night. Plus I get that $30 off first Amazon purchase so the radio cost me a grand total of $105.99

I figured for that money, it had to be worth it when I heard people say it was worth $165 that people once paid for it. Heck people are still paying over $150 for it excluding shipping. I paid $65 for the Degen 1103 shipped so for $40 bucks more, I thought I got a heck of a deal.

Thanks John,

I'm glad you liked it.

Yes, the whip does give it some degree of directionality depending on the
signal.
Yes, many flipped out when they read it had no ferrite rod built in. Many
didn't buy one due to that. But here in Florida I don't notice the loss. But
just set it horizontally all the way and it does it's job. I like the radio
plus the potential for getting XM sat radio one day.

Hi there Joe

Do you know you played a major, major role in me buying the radio? I know how highly you spoke of it and you've used some of the best rigs out there. I thought of you when I hit the "Buy" button.

Lucky

4260. Yeah,I am pickn em up,

I am just starting to get my Technician license. I'm wondering about using the internet and print instead of voice to communicate via Short Wave. I've been reading some about ECHO but don't have a good understanding of that principle. Would one be able to communicate via the internet with just a Technician's license or would I need a general license?? Some people in the club that I'm part of mentioned something about ECHO as a means of communicating but I think that might require morse code which I don't know yet.

Thanks.

Approximately 50% of those affected by ALS may exhibit uncontrollable
laughter or crying. This is referred to as psuedobulbar affect.
Depression can also be a symptom. Some PALS experience Sialorrhea,
drooling. All of these symptoms (depression, uncontrollable
laughing/crying, and drooling) can be treated with medications and
should be brought to the attention of the physician.

I'd suggest putting "drake r8-b r8b r8" in the title, just to make sure it the search engine picks it up. You can explain in the text that it is the R8b just so their is no confusion.

Avoid using a red velvet backdrop as your ad might get confused with RadioMart-RM. If you are a non-smoker, mention that as well.

Yes, but we at rec.radio.shortwave celebrate conspiracy theories and Hidden Knowledge. So, would it be impossible to develop a new generation of IBOC-AM which would have independent programming on the digital sidebands? Of course, the "new and improved" IBOC would require consumers to pay for yet another Ibiquity patented radio.

Also, when the presumed analog phase-out is completed, will the channels be restored to the old standard, or will the broadcasters have to find something to do with all that redundant bandwidth?

[snip]

Yes, but as you suggest, higher priced analog -- or older, as in
boatanchor -- radio technology outperforms the newer analog radios. But
people seem more interested in a radio's price rather than quality. Sharper
skirted filters, low distortion detectors and real noise limiters could now
be mainstreamed into current radios, if people were willing to pay a little
extra.

And things might have changed, but most people don't seem to have even half
an audiophiles interest in good sound. FM took a generation to catch up
with AM. AM stereo faded away. People are moving from CD quality to MP3
quality.

Good enough is plenty good as long as it's cheaper and more convienient.

Seems like an awful lot of trouble to pick up radio. I have no difficulty with 3 feet of wire hangin' out of the back of my 'ol Hallicrafters. And it's free.
It doesn't seem like we've come as far as they tell us we have.

So the warranty and a 220v converter is worth about $50.00, no way go
with the cheaper one, even the .50c radios for the kids stocking from
the dollar store will probably be working in 10 years.....

Try it out on Sackville Canada relays, which is more or less the
poster child for synch detection being necessary.

6120 from 5-7am EST, or 6145 from 7-8pm EST (Radio Japan) being
one set to try.

You get huge distortion without synch detection, most of the time,
as the carrier and sidebands have wildly independent strengths.

Assuming you can hear them ; I guess they cover the eastern US,
where they're quite strong.

So it's a fine example of strong-signal selective fading.

My already owned primo battery charger and NIMH batteries have kept
me from ever needing the 220v step-up transformer.

My 1103 is the best portable I've ever owned, reception wise, and that
includes a Sony 7600GR.

I've had it for a year and a half. I'll post back in 8 and a half years and let
you know if it's still working.

I think you will find Ebay to be a very good place to sell your used Drake. You will certainly get a wider audience than would be possible in any other venue.

Search the closed auctions for an idea of what the radio might bring. Unless you just want to move the radio, consider using a reserve to cover your minimum price, set the opening bid low and let the bidding begin.

Oh yeah, be as complete and open in the auction description as possible.

I think *echolink* is prolly what you miss overheard. Check this out:

http://www.echolink.org/

You don't need to know CW for this. If you get your no-code Tech license,
you will be able to communicate over the internet using echolink. Please
don't stop at this though, Amateur Radio has so much more to offer than
communicating over the internet. Just a suggestion.

Thats cool! I was tuning around the AM broadcast band and up into the 160 meter Ham band and it was crowded as all hell. I'm new to BC Band DX'ing, and new to the AM broadcasters in Central Texas plus I didn't have time to ID anything, but it looks like fun. I'll try to look into it again tonight.

WDIA has been around for a long time and has a rich history with Memphis music if you're into that kinda thing.

I'm at a loss as to why one would go through the hassle of getting a
tech license just to acquire software to allow one to use voip or other
communications over the net. One can chat just as well over ther net
with no license!

In addition to the sound advice already offered, I suggest that you take a lot of very clear, high resolution photos of the R8B and post them in your ad. Such photos will make people feel more comfortable about bidding, and about later increasing their bids.

The R8B was the best in its class, in my opinion. You'll have no trouble selling it. The only question is: What's going to take the place of the R8B in your shack?

There's always been a middleman it seems. Once upon a time long long ago I remember selling and buying radios on Fidonet BBS Shortwave, Compuserve Hamnet and using the consignment shelves and bulletin board at EEB.

Thanks Lucky. The DE1103 does a pretty decent job of nulling
interfering stations and catching nighttime MW dx stations. Would the
E1 provide that level of MW performance?

From FCC Public Notice DA-03-831:
(http://www.fcc.gov/fcc-bin/audio/DA-03-831A1.pdf)

"Until further notice, AM stations must restrict IBOC operation to daytime hours. An AM station with authority to operate between 6 a.m. and local sunrise (pre-sunrise hours) and between local sunset and 6 p.m. (post-sunset hours) may operate its hybrid IBOC system during those periods. "

As I read that, AM stations that are authorized to operate in analog between the hours of 6am and 6pm are also authorized to operate IBOC during those hours. Admittedly those two sentences could have been worded a lot better!

That is indeed a different definition of "night" than the one the FCC uses for determining whether a station should be on nighttime power and/or antenna pattern. Mike's KDIS is required to reduce power from 50kw to 20kw at night, and that change is required to take place at 4:45pm. (for the next two days; it slips to 5pm on the 1st of January) But as I read it, they can leave the IBOC on - on the lower power and night directional pattern - until 6:00.

> these can't be abandoned overnight. The Station's around the country
> are now in the first phase of implementing digital radio, in the form
> of IBOC / HD Radio. And my bet is that it's *not* going to go away.

We are finding in TV just how slowly old receivers are being dropped. In TV we have the advantage of cable and satellite operators doing the downconversion for us in 85% of households - and the fact that a given household has a relatively small number of TV receivers. Also, by using an "in-band separate channel" conversion scheme, the new digital TV signals result in little or no interference to existing analog service.

Even so it appears the transition will take more than ten years.

Radio doesn't have most of those advantages. Nobody will be downconverting HD to analog for old receivers. Most households have handfuls of radios - far more than they have TVs. For the millions of us in outer suburbs (and the millions in lightly-populated and rural areas), the interference will not be negligible. Especially on AM.

FM IBOC is certainly an upgrade for those who listen to mainstream stations *and* live (and commute) in the core of the market. It is likely to be a major unpleasant surprise for those who live in outer suburbs and outlying towns.

> IBOC-AM which would have independent programming on the digital sidebands?

AFAIK, the standards say that -when the signal-quality of the digital
signal drops to low- the radio should switch back to analog.
There seams to have done quite some effort to keep the analog and
digitale signals syncronous.

This means that the analog and digital audio-channels must be the same.
(this of course does not apply to any additional digital channel).

From what I understand, IBOC was developed because the US broadcasters
did not like DAB/eureka for a number of reasons; one of them being "it
did not fit the current business model"; so that why they opted for a
system that allowed for as less as possibe new content and where the
digital channel is contenwise the same as the analog channel, only with
better audio-quality; and -therefor- influence the current situation in
the radio-market as less as possible.

The funny thing is that -with nationwide satellite-radio and podcasting-
the radio-market is changing anyway.

> Also, when the presumed analog phase-out is completed, will the channels be
> restored to the old standard, or will the broadcasters have to find
> something to do with all that redundant bandwidth?
Depends on the legislation. If it has proven to have worked OK for I
don't know how many years (during the switch-over) why go back to the
old bandplan?

A fully-digital frequeny-slot in band II (400 Khz) does allow for -say-
3 to 4 radio-channels at as-good audioquality as current FM; why go back
to just one channel.
Radio-stations will probably be interested in these new channels to
compete with XM, sirius, podcasting, (perhaps) DVB-H, etc. etc.

>>on first and second adjacent channels.

> It's just like DRM... It's QRM!

And the same argument applies as for DRM. What is radio-bandwidth for?
For people to listen to a radio-station or for DX-ers to receive some
far-away station?

Far more people are interested in better audio-quality or additional
stations then DXing.

As far as there is no conflict between these two groups of people, no
problem; but if -as is now the case- the gouvernement has to chose
between one or the other; the choise is pretty easy.

And you can post "DRM = QRM" or "'tart boy" as much as you like; this
will not change the situation.

Tim Abbott is a Vietnam veteran who lives in the Southwestern
Virginia town of Hillsville, a conservative, blue-collar community that
tends to vote Republican and bleed red, white and blue.

But, like an increasing number of veterans, Abbott is fed up with
President George W. Bush.

"Bush talks a lot about freedom, courage, transparent government and
the rule of law. He talks," Abbott says. "His speeches are carefully
choreographed before audiences of his faithful -- often Christian
fundamentalists or, to paraphrase Bush,"Christian-fascists"-- and they
must sign loyalty oaths to Bush. He speaks before audience after
audience of soldiers and sailors who cannot speak except as directed
by the White House."

Normally, such comments would be risky in a mountain town where
Patriotism rules supreme but Abbott expressed his views this week in
an op ed article for The Roanoke Times and found many people
agreeing with him.

"When I think of Bush, I do not think of liberty and courage,
compassion and justice. No, I think of arrogance, greed and lies,"
Abbott wrote. "He is a thug, a buffoon and a coward. Not only is he
incompetent, he is corrupt."

In normal times, these would be fighting words and Abbott would do
well to avoid lunch at the Hillsville Diner, the Main Street eatery where
the locals gather to discuss politics. But George

W. Bush's times are
not normal times and Abbott is greeted warmly on
the streets of
Hillsville.

"In his Mission Accomplished foray, (Bush) wore a
military uniform,
something no president has done since Washington,
and Washington
only wore the uniform to quell a rebellion,"
Abbott says. "Around the
world he has replaced the Soviet Gulag with the
Bush Gulag, where
men may be tortured."

Abbott's comments come when this web site
revealed that the
Pentagon has ordered soldiers home from Iraq for
holiday leave to
give pro-war interviews to their hometown
newspapers and television
station. This does not surprise a veteran who
learned about military
duplicity in Vietnam.

"Others before whom he speaks may ask no
questions. He runs from
journalists, as we have seen in China, even on
those rare occasions
that he speaks before them," Abbott says of Bush.
"Even worse, he
has paid journalists to say good things about him
and his policies. He
also produces propaganda from government offices
that he offers as
news reports. And any protests against his
policies are diverted well
away from his sight and hearing."

In recent weeks, I've spoken with dozens of vets
of Vietnam, Desert
Storm and the present invasion of Iraq and most
speak with anger
towards Bush and his policies.

Soldiers serve under a code of honor, something
they say Bush lacks.

"Bush is of a kind with the dictators; a
strutting, sanctimonious buffoon
who talks democracy but acts like Saddam
Hussein," Abbott says.

"Bush might differ in degree from Hussein, not
having been in power as
long, but in behavior, with torture and the
corruption of government,
they are of a kind.

"While al-Qaida is an enemy of the values and
principles of the United
States and Western civilization and must be
confronted, it can do no
more than kill people and destroy property.

"Bush can subvert our principles and
institutions. He is the greater
enemy."

Source record: 56380

Dear Cuhulin,

I agree that the styling of the ICF-SW7600GR is not as attractive as it ought to be. The "curved" tuning/scanning buttons at the bottom right spoil even more what is essentially a "drab" design. Frankly, I feel the same way about most of the shortwave radios available today. I am not "keen" on the styling of my AOR AR7030 Plus either (actually it's sort of ugly and very unimpressive-looking) and the plastic cabinet (with the silk-screened printing on the top) of my Grundig Satellit 800 spoils its looks. (The Grundig would look great if it had a metal or a wood cabinet - imagine a wooden one with a deep-gloss piano finish. The mouth drools!)

The best-looking radios I've seen over the years are the Hammarlund HQ-180 series, the Hallicrafters SX-100, and the National HRO series (especially the 500), and, at a far lesser cost, my Lafayette HE-10 (which my wife - and just about everyone else - hates, but I love! Its styling was patterned after the Hallicrafters S-38). These looked like "real radios." (There are a number of other great-looking SW radios from the past as well. Probably the best-LOOKING SW radio being made today is the Japan Radio NRD-545.)

That said, the performance and cost of the modern radios makes them stand head-and-shoulders above those older ones. True, the Hammarlund and the National (a transistorized unit) will still perform fairly well today, but look at their relative cost: the Hammarlund was $430 in 1962 , the Hallicrafters was $325, and the National HRO-500 was $1300 IN 1965!!! (My Lafayette was $79.95 and its HE-11 speaker was $7.95 and a pair of Clevite Brush BA-200 headphones - the best SW headphones I have ever used - was $14.70, all in 1962.) THINK what that would be today! It would be AT LEAST 10 times those prices, if not more. (And THINK of the cost of re-tubing and other repairs. The mind boggles.) And NO WAY are those older radios going to even MATCH the overall performance of my AOR AR7030 Plus.

As an example, who, back in 1965, could have even IMAGINED the Sony ICF-SW7600GR with its fantastic performance relative to its price? Do you realize that if you adjusted its price to 1965 terms its cost would be about $12.00? Amazing!

So I just ignore the styling and savor the performance, reliability, and affordability of today's radios.

But, like you, I really wish they could style them better!

Best,

Joe

P.S. By the way, I personally have been buying from Amazon for many years and have ALWAYS found them to be reliable. They DO care about the customer. I have recently had an experience with them (not concerning radios) that demonstrated just how good they are. I would HIGHLY recommend Amazon to everyone.

Dear John,

You're right. I guess I could have asked my question more diplomatically. I certainly didn't mean to be argumentative. I just hope that David is not abandoning the shortwave hobby. While I never owned a Drake R8, I know it is one of the very best receivers out there and, even if I were buying something else, I would want to keep it. (Can you have too many SW radios?) There is no question that someday it will be considered a "classic" and should command a much higher price (both in absolute AND relative terms) than it does today.

I know that, frankly, it is none of my business. I am just curious. I do hope that, if he does in fact sell the radio, he gets a good price and the radio goes to a good home.

Best,

Joe

KB,

The same applies to the limited number of former High Powered
"Clear Channel" 50KW Radio Stations.

Many more Local 1KW, 5KW and 10KW Radios Stations serve more
People (Radio Listeners) and produce more Local Jobs and Revenue
plus Local Taxes that aggregate into a larger National Economy then
a Few Clear Channel Big Stations.

After all it is "The Broadcasting Business" and a Corporation with
a Hundred Local Radio Stations can make more Money; then a
Corporation with a Few High Powered Clear Channel Radio Stations.

Yes, I agree the Drake ranks up there as a high performing shortwave radio with lots of features for manipulating a signal. If it isn't a classic it soon will be along with other hobby favorites from Kenwood, Japan Radio, Icom and Yaesu.

On a somewhat related note, do you know whether Yaesu and Icom have dropped their receiver lines? There were many messages about their pending demise on this forum and at some point Universal Radio gave some indication that was the case.

Best wishes for a fine new years....

Pardon my jumping in here, but I just finished a long overdue read of
The Chip by T.R. Reid. While it tracks the development of the IC, the
history of the transistor figures big in the story. The first consumer
product using transistors was a portable radio was made by Regency in
1955 and it sold for $49.95 featuring AM only reception and a
speaker!! And did it sell....

I agree on those old HRO receivers being a nice looking receiver. I
was fortunate enough to have owned an HRO-500 for maybe a year. It was
fun to learn the operation of that turquiose colored
transistor-mechanical hybrid and that big knob was a joy to use.
Fortunately it worked and didn't need repairs!!

The IC-R75 is still around. Apparently Icom took some grief from dropping it, and they brought it back with the UT-106 installed at the factory.

The Yaesu FRG-100b is still kicking around, mainly because it's such a slow seller that stocks haven't been depleted yet.

Dear John,

Do you realize just how much $49.95 was in 1955?

It's amazing what has been accomplished in electronics in the last fifty years, both in regard to product and price, not even to mention reliability.

Best,

Joe

4341. United Radio Broadcasters of New Orleans QSL cards now available

Newsgroup: rec.radio.shortwave
Date: 2005-12-30 19:15:46 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <43B58761.1A8627EC@milestones.com>
Source record: 56450

United Radio Broadcasters of New Orleans/WWL hurricane QSL cards now available.

The International Radio Club of America (IRCA) has been granted permission to act as the QSL Bureau for stations that participated in United Radio Broadcasters of New Orleans (URBONO) effort. URBONO - headed by WWL Radio 870 - came on the air following hurricanes Katrina and Rita which struck the United States Gulf Coast area in late 2005. Listeners from around the world are invited to submit their reception reports to receive one of the special QSL cards that have been printed to commemorate this unique response by broadcasters to these natural disasters.

Stations that participated in the URBONO network were:

WWL-AM, New Orleans, LA, 870 kHz

WSMB-AM, New Orleans, LA, 1350 kHz

WLMG-FM, New Orleans, LA, 101.9 mHz

WNOE-FM, New Orleans, LA, 101.1 mHz

WTKL-FM, New Orleans, LA, 105.3 mHz

WODT-AM, New Orleans, LA, 1280 kHz

WRNO-FM, New Orleans, LA, 99.5 mHz

WYLD-AM, New Orleans, LA, 940 kHz

WYLD-FM, New Orleans, LA, 98.5 mHz

WQUE-FM, New Orleans, LA, 93.3 mHz

KHEV-FM, New Orleans, LA, 104.1 mHz

WYNK-AM, Baton Rouge, LA, 1380 kHz

WJBO-AM, Baton Rouge, LA, 1150 kHz

WFMF-FM, Baton Rouge, LA, 102.5 mHz

KRVE-FM, Baton Rouge, LA, 96.1 mHz

WSKR-AM, Baton Rouge, LA, 1210 kHz

KLCL-AM, Lake Charles, LA, 1470 kHz

KJEF-AM, Jennings, LA, 1290 kHz

WHRI-SW, Cypress Creek, SC

Listeners who wish to receive a QSL card should send a standard reception report including the station they heard, date, time, frequency, and as much program detail as possible (preferably up to 15 minutes). An individual QSL card will be issued for each station heard and verified.

Be sure to include return postage in the form of mint U.S. stamps for either domestic or international rates (remember, postage rates go up after the first of the year), U.S. currency (US$1 should be sufficient for most international replies) or International Reply Coupon(s). Please adjust the amount of funds or postage send if reports for several stations are sent.

Please mail reports to:

URBONO QSL
P.O. Box 3777
Memphis, TN
38173-0777 USA

The K7RA Solar Update

SEATTLE, WA, Dec 30, 2005 -- Average daily sunspot numbers
rose over 22 points this week to 71.4, and average daily solar flux
was up by nearly 5 to 91.2. Not too bad with the predicted solar
minimum a year away. Over the past week geomagnetic indicators
were stable, but a solar wind caused the K and A index to rise on
December 27 and 28.

Sunspot and solar flux levels should remain approximately the
same, perhaps slightly lower January 1-4. Geomagnetic indicators
should be slightly unsettled for today, December 30, then quiet
December 31 to January 4, and quiet to unsettled January 5.

Next week we should have a look at the average sunspot numbers
for the year, comparing them with past years. So far, with only a
few days to go, it looks like the 2005 average daily sunspot number
will be nearly 30% less than in 2004.

Conditions should be good (little geomagnetic activity) for Straight
Key Night, the annual operating activity from 0000-2400z January
1.

So here on the West Coast it will run from 4:00 PM Saturday until
the same time on Sunday. This is a fun activity in which
participants use regular old-fashioned telegraph keys and often
vintage gear to communicate manually via Morse code.

Jaap Verheul, PA3DTR wrote in about Marcel Decanck, ON5AU
and his propagation web site. Jaap likes to use the beacon logging
page (click on "Beacons On-Line" on the left side of the page)
which shows which beacons from different locations are currently being received
at ON5AU in
Belgium. You can get some idea how your part of the world is being received in
Europe on the
20 meter band and above by looking for signals from the beacon station closest
to you.

Red Haines, WO0W sent in some interesting links recently, including the
Propagation Page for
the Radio Society of Great Britain. Many nice links and resources on this page.

For more information concerning radio propagation and an explanation of the
numbers used in
this bulletin see the ARRL Technical Information Service propagation page. An
archive of past
bulletins is found here.

Sunspot numbers for December 22 through 28 were 77, 47, 70, 77, 90,

78 and 61 with a mean of 71.4. 10.7 cm flux was 87.6, 93.1, 91.9, 91.8, 92.5, 92.3, and 89.1,
with a mean of 91.2. Estimated planetary A indices were 4, 1, 3, 6, 6, 18 and 14 with a mean of
7.4.

Estimated mid-latitude A indices were 4, 1, 2, 3, 3, 10 and 13, with a mean of 5.1.

Old radios like that and old timey vehicles (I also own a 1914 Ford T Model one seat roadster car that I bought for $1,800 from a guy in Sioux Falls,South Dakota in November 1971,he and his wife were moving to Minneapois and they couldn't take the car with them.I read his ad in Hemmings Motor News (www.hmn.com I have owned quite a few old,old cars before,I wont part with my 1914 Ford car though) and I phoned him about the car,I caught a flight from Jackson to Sioux Falls,of course his pretty blonde wife took my money.I rented a U-Haul truck and I drove non stop back to Jackson with my car in that truck.I was about to run out of gas in Kinsley,Kansas at about 9:00 PM that night,I pulled up in front of a Vickers gas station and nearly froze to deah waiting on that gas station to open up the next morning so I could buy some gas for the truck) make me Drool Drool Drool.

While we all agree that DxArse's mantra is annoying, I gave a listen to
the DRM demo on the net posted on this NG, and the audio sounded
"digital". The problem with these compression schemes is when the
feces hits the fan, the powers that be seem to vote for more
compression versus better sound quality.

DX Ace,

At the Price Mark-Ups - I am surprised at a Chinese
Manufacture like Tecsun or Degen has not gotten into
building and offering a reverse-engineered-product
like the Systems Magnetic Longwire Balun (MLB) ? ? ?
http://www.universal-radio.com/catalog/sw_ant/1484.html

Also the RF Systems MLBA-MK1 or MLBA-MK2 Antennas
http://www.universal-radio.com/catalog/sw_ant/1465.html

Figure with the Chinese Manufacturing Cost being 1/10th
of the European's. And the Chinese made Items selling
on eBay for 1/3 to 1/2 the Current RF Systems USA Price.

GOt 2 of them ... one in vehicle and one inside the house... both work great. The one in the
house has the antenna on top of the entertainment cabinet..(7 feet up) occasionally I get a
fade in signal strength but ont very often. I strung the antenna wire over to a west facing window
and got some better reception.. but not enuff to leave the wire strung out.

I know...$49.95 was a lot, but according to Reid, it was still less than comparable tube based portables. I remember listening to the 1959 Dodgers using a Sony transistor and an earplug. And to think we can buy Radio Shack Color Radios for $5.00 And yes, reliability of electronic products combined with low cost is such that repair shops are fast disappearing.

I remember when the first TI LED display handheld calculators were distributed in my office in 1971. At a price of $200.00 they were inventoried and depreciated!

Vets get in races to fight GOP

War experience touted for Dems.

Veterans for a Secure America fields candidates for Congress nationwide, including two in Colorado.

By Jim Hughes
Denver Post Staff Writer

More than 30 Iraq and Persian Gulf War veterans have entered congressional races across the country as Democrats, hoping to capitalize on their military experience to topple the incumbent Republican majority.

In Colorado, two former military men, Jay Fawcett and Bill Winter, are vying for the House seats of two strong, entrenched Republicans:

Rep. Joel Hefley of the 5th Congressional District and Rep. Tom Tancredo of the 6th Congressional District, respectively.

"Do we understand military and foreign affairs? You bet," Fawcett said.

"Most of us have been to the point where you get a direct dose of military and foreign affairs, mostly in the category of small-caliber weapons. But we understand that that is just one aspect of national policy."

On Dec. 20, Fawcett and Winter joined 35 Democratic veterans running for Congress at a strategy session in Washington, D.C.

The veterans voted on a name for their emerging caucuslike campaign coalition: Veterans for a Secure America.

They also agreed that their military backgrounds should be promoted as credentials for leadership across the full spectrum of public policy, said Fawcett, an Air Force veteran of the 1991 Gulf War who has taught at the Air Force Academy and now works as a consultant to Northern Command in Colorado Springs.

The group will reconvene in Washington in February to respond to President Bush's State of the Union address in a news conference on the steps of the Capitol, Winter said.

An attorney and the former president of the grassroots liberal organizing group Be The Change, Winter spent 10 peacetime years in the

Marine Corps and the Navy.

Fawcett said the group is not anti-war but is concerned about what appears to be a lack of a solid plan for the war in Iraq.

He said the group's military experience could be crucial in providing better leadership.

The war in Iraq, which polls show is now unpopular with most Americans, is a growing political weakness for Bush and for Republican lawmakers, Democratic strategists say.

As proof, they point to the experience last summer of Paul Hackett, an Iraq war veteran who narrowly lost a congressional bid in a solidly Republican district in Ohio.

Hackett now is running for Senate.

"Iraq is in the eye of the beholder in many ways, but increasingly, the public is viewing it negatively," said Rick Ridder, a Democratic consultant in Denver.

"I certainly think there is a greater momentum now among (Democratic) veterans, after Hackett did so well in a predominantly Republican district."

"[On Tuesday, Rush Limbaugh attacked Iraq war veteran Paul Hackett, accusing the Marine of] trying to hide behind a military uniform ... pad the resumï¿½."

It is transmitting right now.

I regularly pick up an unusual data signal
at 15937.5 kHz (USB). It is 7 fsk signals stacked
in frequency. They are 170 Hz shift and there
is 170 Hz between them. The Baud rate is 75.
All seven channels send the same bit stream
but offset in time by as much as 6.66 seconds.
The bits show a flat autocorrelation.
Anybody know what this is/ who is sending
it?

Hi John and guys

I remember when VCR's and DVD players first came out. They were like $1000. Now you not only can buy one for $40, they are on there way out. Technology is like a commodity actually. When it comes out, it's new technology "technically" speaking. But once it's marketed to the masses, it becomes a commodity "technically" speaking.

It will be the same with plasma T.V.s Once like $20k, prices have come down a lot. In a few years you'll be able to buy one much, much cheaper. I want one!

Lucky

Hackett ran a very interesting campaign. If you watched
his television ads (and there were way too many ads
for the 2nd District here locally), you'd have thought he
was pro war. If you came to see him in person, you'd have
realized that his television spots were deceptive at best,
since he was definitely anti war. He also tried to portray
himself as a man of the people, but in reality he was
the richer candidate, living in one of the most exclusive
neighborhoods in the Cincinnati area.

Hackett also had the luck to run against someone
after a bitter Republican primary to succeed Rob
Portman; most of the negative ad work was already
done for Hackett by the nastiness of the primary
campaigners. Some of the implications that some
of the primary ads ran against Jean Schmidt were
the type that you'd not expect to see anymore,
like the equivalent of "she's unfit for the office
because she's a woman" or that "she disagreed with
her leadership" on certain issues. (There was way
too much mudslinging all around, really. One guy
was mad enough at losing in the primary that he started
telling people to not vote for Schmidt, even though
most of his ads were aimed at yet another candidate.)

Hackett's run for the US Senate is complicating things
for the Ohio Democratic Party, since they wanted to
give the nomination to another guy who's actually
held office before, and they view Hackett's run as
distracting to the overall campaign. The Democratic
Party was hoping that the conservatives in Ohio would
be not so thrilled with Mike Dewine and could win the
election because the conservatives would stay home,
but Hackett has become pretty much a lightning rod
and if he wins the primary, the conservatives
will have plenty of reason to show up at the polls.

For One and All,

World Wide {Global} Climate Change Cycles
Would be a better description of what many Scientist
are observing and trying to draw inferences from . . .

The Idea {Hyperbole} of "Global Warming" and the reality of the current
World Wide {Global} Climate Change is Politically Motivated "SCIENTISM"
and not a proven 'Scientific Fact' [.]
http://groups.google.com/group/rec.radio.shortwave/msg/cbd2dc536f938264

"The `Hockey Stick': A New Low in Climate Science"
- by John L. Daly
HOCKEY STICK => http://www.vision.net.au/~daly/hockey/hockey.htm

Some Scientists with a Political Agenda Call It
[The Evil] "Global Warming" and endeavor to Blame this
Cyclical 'Warming Trend' on Mankind, Industrialization,
Modern Western Civilization and Naturally the USA.

Other Scientist look to the History Records as recorded by Nature
in the Earth, Snow, Ice and Plants and say what we see is a Natural
Cyclical Trend that has very little (if nothing) to do with Mankind,
etc, etc, etc.

The Sun's Cycle and the Earths own Cycles are what we are seeing
and Mankind can only go with the flow (adapt or die).

Note - Recent evidence suggests that Mega-Volcano-Eruptions
from both Continental and Under-Water Volcanoes can bring-on
an Ice Age in as little as Twenty Years (Yes 20 Years).

The Truth is that we have World Wide {Global} Climate Change Cycles
-vice- The Liberal Political People Scaring HeadLine of "Global
Warming"

DaviD - I only have two words to say to 'you'

I didn't say it was ''incorrect''. I just pointed out what is ''more
correct''.

''-cycle is also an indication of frequency of periodicity, usually
associated with an additional modifier indicating the time unit.
```

Typically used in units such as xxx kilocycles (thousand cycles) per second, xxx megacycles (million cycles) per second, etc., where xxx is some number. The cycles per second is often implicit such as in "this station broadcasts at 680 kilocycles" - this is taken to mean "680 kilocycles per second" or 680,000 cycles per second.

The "cycles per second" is now usually expressed with the unit "hertz", named in honor of the pioneering physicist Heinrich Rudolf Hertz and defined as "cycles per second". Thus 88 megacycles, or correctly, 88 megacycles per second, is now expressed as 88 megahertz.''

I have found that using the black plastic 35MM fil canisters filled with silicon seal works very well. The Kodak ones last much longer then the other I have checked. Don't use the clear, or translucent ones as they will fail in a single season.

I us the plastic ones for mini DXpeditions.

If you are lucky enough to hae an aluminum 33MM cnaister they work great! My dad was an advanced photographer so I have a few of the aluminium and even fewer of the even older painted steel units.

I have an aluminium unit that has been up for ~10 years with no sign of failure.

I am waiting for a greenie to explain to me how increase CO2 emmisions here on
earth could have any effect on the surface temp of MArs.

Since NASA have pretty good data showing such an increase I accept it is real.

I also accept that global warming is very likely "real".

But I am not convinced that man has all that much to do with it.

I don't have time to dig out the NASA links, but a simple net search will turn them up.

I am wondering just what this has to do with shortwave radio

>From the green viewpoint maybe the best thing for the planet would be for the
bird flu to become a real killer pandemic and wipe out ~90% of the humans
on the earth.

For anyone in the Lexington KY area I thought they might like to know that a local
mil surplus store is going out of business. I stopped by today on my monthly inspection
and was shocked top find they are shutting down Dec 31. Short notice I know. But
everything is 50% off. I bought 4 rolls of 1000' of Alpha #1551 22AWG 7/30 silver plated
wire with a fairly tough PVC jacket for $4 each. It makes great temporary antennas that
have stayed up for several years. I snagged the better colors for "hidden" antennas, but
many rolls remain.

He also has 8' RG58 with BNC ends for $0.5 each.
Right angle BNC for $0.25 eac.
UG643 barrels for $05 each.

He has 8' fibre glass tent supports, with flat tripod feet for $4 that might make a good
wire antenna supports. I bought 3 and hope to try them early Saturday and if they
work I intened to go back and get some more.

Lots of rope etc.

I have never convinced myself that silver plated wire works any better then plain hard
drawn copper, but I like to think every little improvement will help dig out that weak one.
At these prices it is cheap enough to toss after a mini DXpeidition if it gets tangled.

The place is "Stuff" on Winchester road about 4 miles inside clark county on US60.
I guess since it is in Clark county it is really on Lexington road but I never think of it
that way.

I have nothing to do with Stuff other then a very happy customer.

Russia Continues to Slide Into Dictatorship

by Lev Navrozov
...
A veteran human rights activist has said that a Defense Ministry plan to establish a new combat force responsible for radio jamming devices could mean a return to the Soviet-era practice of jamming foreign radio and television broadcasts. "It appears that our country is sliding back to the times when jamming was introduced in the Soviet Union," Lev Ponomaryov told Nezavisimaya Gazeta. "Control of the dissemination of information via the Internet and radio will become the next logical step."

I can't speak for or against DRM, as I've never heard it. However, IBOC
IS a bad source of interference. And not just to DX'ers. Not everyone
lives in a big city, many (most?) live in suburbs or rural areas where there
is no 'local' radio station. These people of necessity must listen to what
are referred to as 'rimshots'. These are stations which are considered to
be on the far rim of a city's coverage area. Many of these are at only 400
KHz spacing from the stations in the cities, and are very prone to
interference from the IBOC digital signals from those second-adjacent
channels.

Even IN the cities, if someone likes to listen to a station in the next city
that has programming unavailable in their own city, this is now nearly
impossible.

As far as AM IBOC is concerned, it not only degrades reception of first and
second adjacent channels, it degrades reception of it's own analog on
channel signal, especially on radios designed with wider than 3 KHz IF
bandwidths (which includes most radios made in the 70's and before, of which
there are still tens of millions in use).

FWIW the 6145 broadcast is coming in clear at 7:45PM EST on a Degen
DE1103 and no sideband is needed. Missed the 6120 broadcast so can't
report on that one.

Oh, yeah, I remember when the Sony Betamax came out and one of my
neighbors, being an early adopter of technology was willing to shell
out $1K for that box. I waited until 1986 or so and paid the princely

sum of $125.00 or so.

I'll wait for the high res big screen TV's to drop in price, as they certainly will when the volume gets up enough to allow price cutting.

When the IC first came out in 1960 or so, it cost about 3x more than a standard circuit so it looked like it would never be cost effective. It took the unlimited budgets of the space program to fund development of efficient production lines and drop the cost per IC. Largely because of cost IBM didn't switch from wire-based core memory to chip memory until almost to 1970. By then the IC was making headway in many consumer products largely due to a lot of government funded R&D.

I'm impressed. That kind of reception is limited to the very talented
and dedicated few. It's pure dxAce quality.

The sheer amount of receiver power needed to receive signals from
Memphis Tennessee in Jackson Mississippi just staggers the imagination.

http://www.infoplease.com/atlas/state/mississippi.html

Very, very impressive.

http://www.coasttocoastam.com/shows/2005/12/30.html

1) FRIDAY: 2006 Predictions I w/Art Bell

Art Bell hosts the first of two shows featuring
Predictions for 2006 as made by callers.
He'll also review their predictions from last year.

http://www.coasttocoastam.com/shows/2005/12/31.html

2) SATURDAY: 2006 Predictions II w/Art Bell:

Art Bell hosts his annual New Year's Eve Prediction
show featuring callers' predictions for 2006 and a
review of their predictions from last year.

http://www.coasttocoastam.com/shows/2006/01/01.html

3) SUNDAY: Predictions Special w/George Noory & 8 Guests
Kicking off the New Year, George Noory presents
a special 4-hour Predictions Show featuring a group
of psychics and prognisticators, each appearing in
a half-hour time slot.

The line-up:

Joseph Jacobs
Dr. Louis Turi
The Merlin Project
Hans King
Sean David Morton
Gerald Celente
Robert Camp
Aaron Donahue

Yes, there are some Hams that have already documented the the
neighborhood wide broadband noise generated by these BPL systems. The
levels are high enough that it would not surprise me if they are not
already raising the average background noise as this crud propagates
across the country.

If you sell it on ebay do the buyer a favor and DO NOT ship it at the post office. I bought an NRD-525 on ebay on 12/24. The little shipping stores were closed and the seller tried to do me a favor by sending it US mail. Six days later it hasn't made the six hour trip from San Diego to Phoenix and the post office tracking number provides no status information at all. It is useless, just like their service.

The height of the orbit has not much to do with it. It's the fact that
they are orbiting the planet at the same rate as it turns that makes all
the difference.

A tree outside my window has very little in the way of altitude but
remains apparently stationary. It's upper branches move around the
exterior of the planet at roughly 24 hours per complete revolution.

Any variation in the branches' time from that of the roots would be
cause for great concern.

Good idea to put photos up. I have a web site and have in
the past, when selling photo equipment, put a bunch of high
quality, well lit, detailed photos on the site, then put a
link to it on the eBay page. I believe the photos resulted
in selling a 20-year-old Pentax XL with fast lens for $600
when I'd expected to get $100. Thanks for chiming in on this.

Regarding the shack, I'll respond to that in a reply to one
of posts below.

< Snip >

This is my main contention that this digital technology does not sound
better. It is still way to low a bit rate for me to call it "good
sounding." Yes, you don't get the static and power line noise but the
trade off is low quality sound filled with digital artifacts. Basically
you trade background noise and interference where it exists and trade
it for low quality sound all the time. Other trades are drop outs
instead of selective fading for example. This is just a mixed bag of
good and bad at the cost of obsoleting all receivers made since radio
began. I can't think of a worse trade off and it is just plain stupid to
try and cram it down the general publics throat.

I've had just the opposite results. The Postal Services in Canada and
the US have been very good and reasonably priced. UPS on the other hand
has practiced extortion on me every single time I've used them. Double
billing on the shipping costs is a favourite trick of theirs.

I hate UPS.

Don't be so modest. It must be at least a hundred or more miles away and with you living in that Black Hole area of the US where no intelligent signal can hope to escape, it was no small feat.

I hope you managed to tape the events as proof for the unconvinced..Now *I* know you'd never stretch the truth, but..well...the others may not be so easily swayed..

Thought about contacting the Guinness people about an entry into the Record Book?

Because I'm hearing impaired but still very interested in short wave radio. I use lipreading a lot to understand conversations. So, on a radio I may have difficulty understanding what is being said. I do understand the benefits (and drawbacks of VoIP as that's what we use at work. Still I don't want to miss out on SWR either. Does that make any sense?? Thanks for your input.

I'm hearing impaired too.

But isn't SWR (Shortwave Radio I assume) broadcasts widely available as
webcasts now? At least most of the majors are going that way.

Well, this is all very interesting. I'm just wondering as I'm not that up on HD radio anyways a couple of things:

First of all, if AM is mostly talk - as it is now -- what is the audio difference offered by HD?

And secondly, if the stations are using parts of other band widths to pull this off -- at least in populated markets - like LA, Chicago and New York -- isn't HD going to be a nightmare for the FCC. It was bad enough just trying to protect AM Clear Channel stations when the sun goes down. How on earth will the FCC ever be able to govern all of this - not mention the engineering nightmare it will cause?? But then I'm not an engineer, maybe it's not as bad as it seems.

Well, thanks for that summary. That was quite insightful. If you can actually get better AM reception wtih HD or IBOC then it would be a great addition to AM radio. Personally, it seems somehow scareligous to listen to XM or Sirius. I just miss the commercial aspect of radio. So, anything to keep AM/FM viable would be great. Do you mean by fidelity sister stations that they can actually run separate programming -- we have a station near me that broadcasts on like 94.7 and then also has a second transmitter located nearby that broadcast on 94.9 - but they are the same programming sounds.

Thanks for your insight.

PersistentVegetativeAce.com it is.

At least a third of the US is just boneheaded crap. Use the James West recall as an example. This asshole was soliciting sex on the internet and giving those he screwed jobs with the city of Spokane. He used city computers to do his cruising. Yet a third of the city still wanted to keep that jerk in power because he towed the party line.

The sheep of the US watch American idol and only view the news if there is a Runaway Bride story. Such garbage doesn't deserve this country.

Nope, I got my copy day before yesterday. Received an email from them explaining the chanages to the system and the reasons for chaning it. Clicked on the link provided filled in the request form. The download password was in my email in box before I even got the program started :-). Was downloading the database within about 2 minutes of readung the original email.

If the new system keeps working like it did this time, I foresee no problem updating the information even though one must apply for a new download password each time.

Greetings! I listened here from upstate South Carolina for about 2 hours during the listed times continuous, on both frequencies and heard nothing.
I listened on the GE Super Radio II, and the RS DX-396. Both are pretty good on Medium Wave, but alas nothing I could possitively ID. It did sound like on the 690 frequency I might have heard some morse, but nothing I could hear on record.
Nice experiment though. I was hopeful being from SC that I might hear it. Conditions were pretty good here, although I have had some electronic interference on some frequencies since our recent ice storm and week of lost power.
Thanks for passing on the tip! Have a great New Year! Jon in South Carolina.

I get the joke and all but seriously is there any reason why metal tape would be worse for a portable antenna than wire? At least you have a handy reel, though you might have to mod the end a bit to get a decent electrical connection.

Sorry to be a poopy-head here but speaking about the site as a whole the author claims to be trying to make a point about ridiculous claims and antenna marketing, but he's falling down on the job.

We've all run into ads out there by folks who sell cobbled-together baling wire and noisy amps to "boost reception," as well as other over-hyped garbage. But he really isn't making the sorts of ridiculous claims the antenna shysters tend to when selling to the poorly-informed. So he fails to make his point.

Yeah, I know he put a ridiculous "list" price on it but that isn't really the same thing as saying "This will let you hear stations only the NSA can get! Best antenna EVAR!!!" As long as somebody knows what they're buying you really can't fault them for what they choose to pay -- there are factors that go into value apart from cost of source materials. Not everybody knows how to make a sturdy antenna from scratch or values their time cheaply so an assembled product has value added. And his "ad" really doesn't hide that what this thing is made of is two steel tape measures and some ancillary parts.

Anyway, even if your time is worth nothing the "real" price isn't ridiculous (list is for suckers, anyway!) 100' steel tape measures go for about 15 bucks each at my local hardware store and he's offering two of them for 30 bucks. So it might even be worth it just for the tapes, the insulator and the alligator clips. Sign me up for a dozen!

Now, maybe if this thing used a FIBERGLASS tape... (No electrocution risk!) :)

> rest, it's fixed.

Thanks for checking. I checked WUN logs and found
nothing.

I tend to think it is commercial but it could be military
(or diplomatic). The FDM aspect is definitely a
diversity thing, to overcome atmospheric fading.
All channels carry the same data. If fading temporarily
wipes out one channel the data still gets through.
There are numerous single channel 850 shift 75 Baud
fsk signals out there. I'm guessing they are military.
HF has notorious fading so I imagine they use
a diversity scheme too but with the parallel channels
spaced out over MHz, not just in one voice width
band. Being the military they have all sorts
of resources so they can use such widely spaced
frequencies. This FDM FSK thing requires less
coordination in setting it up yet still offers
some diversity and immunity from fading.
But the more modern way of doing that is with
OFDM, so this signal is kind of unusual.
It is modern primative.

I heard a program on CRI yesterday with a couple of very American sounding
announcers reading mail from people about their hometowns (in China). They
put in a strong enough signal here to run the LED s-meter on my Kenwood RZ-1
to the top of the scale and keep it there..

> (this of course does not apply to any additional digital channel).

Right. But I'm wondering what the technical limits of the IBOC scheme are.
Are the digital sidebands the same, and, if so, must they remain the same?
I'd assume a current IBOC radio would ignore digital sidebands differently
encoded and fall back into AM mode. So, I'd think independent programming,
even pay programming, isn't out of the question.

>

>
>
> > Frank Dresser
> Cheerio! Kr. Bonne.

I'm looking at the IBOC plans from a radio hobbyist's perspective. DXing is degraded by the wider channel, especially since it's filled with digital noise. And I have a hard time believing there's a great unfilled demand for better sounding AM radios. If there were such a demand, the better radios which are available right now would be better sellers. But people are happy buying cheap AM radios with bad sound. I just don't believe that there's some huge profitable market for better sounding AM radios, even if they work with some fancy new modulation scheme.

More than that, there's little historical reason to think most people want better sound. The Hi-Fi AM experiments of the late 30s and 40s didn't trigger a large demand for great sounding radios. FM foundered from the late forties to the seventies. AM stereo erupted with great fanfare and is now almost entirely gone. People are actually trading their good quality landline phones for Satan's garbley invention, the cellphone.

So, it might seem that the people who are actively promoting IBOC are either risk-takers, stupid or have a hidden backup plan in the case that "HD radio" somehow doesn't manage to open up enough wallets.

<miso@sushi.com> propagandizedrote
> Sure, Putin is a power hungry son-of-a-Bush, but the article is just an
> opinion piece, not journalism. Of course, what would you expect from
> newsmax.

At the beginning of Putin's presidency Lev Navrozov was writing a weekly column for Moscovskaya Pravda (had nothing to do with Pravda) in Russia.

"Lev Navrozov: NewsMax.com columnist and journalist. One of the most brilliant minds in the world, according to many distinguished Westerners and Russians. Published over 1,000 columns and articles on the destiny of civilization, world culture, foreign policy, strategy, defense, and intelligence work since his emigration from Russia in 1972. Winner of the Albert Einstein Prize for outstanding intellectual achievements. Author of The Education of Lev Navrozov (Harper & Row, 1975), compared by the reviewers to Mark Twain, Proust, Orwell, Voltaire, and Dostoyevsky. More than twenty of his articles are in the United States Congressional Record."

What Saul Bellow, possibly the greatest American novelist, a Nobel Prize laureate, a scholar, and a thinker, had to say about Lev Navrozov's latest book in a letter to him as follows:

'I doubt whether you (or anyone) can restore the diminishing sight of what you call "the sightless and hence doomed" West. What one can attempt is to describe the condition in its fundamentals. This indispensable description if it is to be uncontestable will take more strength than any normal man has, for what we have is a probably fatal case of political poisoning, and the distortions and hallucinations it causes may be impossible to dispel.'

http://www.levnavrozov.com/
http://www.newsmax.com/pundits/Navrozov.shtml

You Miso, are certainly poisoned and hallucinating on Left-wing-Liberal-"Progressive"-Socialist-Kommunist propagandic lies and distortions. But since you are in Seattle that doesn't surprise me.

Less noise, for the most part. We have three (3-1/2, if you count NPR)
FM talk stations here in the Nashville market, all of which are a lot
less fatuiging to listen to than WLAC-AM...

> And secondly, if the stations are using parts of other band widths to
> pull this off -- at least in populated markets - like LA, Chicago and
> New York -- isn't HD going to be a nightmare for the FCC. It was bad
> enough just trying to protect AM Clear Channel stations when the sun
> goes down. How on earth will the FCC ever be able to govern all of
> this - not mention the engineering nightmare it will cause?? But then
> I'm not an engineer, maybe it's not as bad as it seems.

Before HD is allowed on AM at night, the FCC will have to decide that
they *won't* protect AM clear-channel stations when the sun goes down.
That those stations will be protected within their "primary" coverage
areas (essentially, within their metropolitan areas) but not within the
skywave "secondary" coverage area.

I find it interesting that this decision has not yet been made. I'll
bet there have been some *interesting* discussions in Washington.
(engineers vs. lobbyists) Widespread deployment of AM IBOC will create
enormous "white areas" where no nighttime AM reception is possible.
Most of these areas will also be losing some (but by no means all)
existing FM service due to FM IBOC.

If you like listening to stations more than 20 miles away, I suppose
it's time to start looking at XM...

Well, I see you've met our village idiot...er, International Goodwill
Ambassador.

In the last few days, he's insulted people from at least four countries
(in addition to the U.S. of course)

He seems to ridicule those whose second (or third) language is
English and ridicule various foreign countries and yet his hobby is
supposedly listening to foreign countries.

LOL at the spectacular irony!

Whatta hypocrite!!

It's best to just let him get back to being a cry baby about DRM and
anyone whose views differ from his...

Happy New Year to all!!

Well, a very good observation. How indeed will the FCC govern this?

Sadly, the answer is that they probably won't, just as with BPL (if you happen to have been following that debate). Engineering and enforcement of technical standards seems to have taken a back seat to the wishes of Big Business.

When I heard about BPL and the FCC blatantly dodging the technical issues, my first thought was that the FCC had been "bought off". Then I said, "Nah, that's too paranoid. They wouldn't do that".

A bit later I read a book about DuMont, the early TV pioneer, and his battles with the FCC about VHF vs. UHF and which color TV system to choose. Well, buried back in Appendix C was an *actual quote* by an FCC Commissioner back in the 1950s who said "Yeah, we called those the 'Whorehouse years' because everything, including us, was for sale".

Now this from an actual FCC Commissioner back in the days of "Ozzie and Harriet" and "Leave it to Beaver". If it happened back in those "innocent" days, do you think it could happen today????

One humorous thing I heard on the local station's discussion is
that the IBOC codec algorithms aren't very good for voice.

And that the receivers, mostly for cars, were in the $200-$300 range.

(If I'm forced to get a new receiver, I'd just go for XM where I'm a
subscriber with a financial arrangement with the provider, and thus
have some microscopic bit of leverage, not just a listener where,
despite how loyal you are to a station, the dreaded "format change"
can happen any time on a whim from the bean counters).

Aside from the comments others have made, you can't just grab any old caps and put them on the AC line, as several television manufacturers found out the hard way during the sixties and seventies. Caps for power line use are specially constructed.

Actually, Iraq wasn't supposed to get any money out of it until after the program ended. The UN was to get the money and use it to send food, medicine, and supplies, and build schools, electrical power stations and the like. Instead the money went to enrich Kofi and his kid and Saddam, and to buy Iraq more embargoed armaments.

Liberals, on the other hand, would never stoop so low as to take, for example, the mother of a man who died in defense of his country and use her for anti-American propaganda purposes. No, sirree.

It's about damn time someone let the American public know what the Armed Forces over there think of what they're doing. It's certain that the liberal media will keep propagandizing against the Armed Forces and the war.

The height of the orbit has EVERYTHING to do with it. The height of the orbit is what causes the geosynchronicity. Arthur C. Clarke figured it out. His first known mention of the subject indicates clearly that the height is of the essence to the geostationary nature:

"An 'artificial satellite' at the correct distance from the earth would make one revolution every 24 hours, i.e., it would remain stationary above the same spot and would be within optical range of nearly half the earth's surface. Three repeater stations, 120 degrees apart in the correct orbit, could give television and microwave coverage to the entire planet." -- Clarke, letter to Wireless World, 1945

Obviously this guy found out a way to make a quick buck. First list a couple hundred items in a short period of time that will bring big bucks, the guy had good feedback so everyone pays, then take the money and run.

I don't think eBay has a way to stop this from happening. It happened to me a couple of years ago with an auto parts dealer that was selling on eBay. He had a few thousand good feedback's so why would I not send him the money? within three weeks every feedback was neg. I didn't get the item or my money back.

People go bankrupt everyday.

4549. Re: CBS/Infinity and IBOC-AM?

Newsgroup: rec.radio.shortwave
Date: 2005-12-31 21:05:41 UTC
From: Byung Myung Sying <pying@fong.com>
Message-ID: <d0rdr15dlrp0l2fn5pi4bjo9qdr64nso1l@4ax.com>
Source record: 56706

I actually have IBOC capability on my home receiver (the Yamaha RX-V4600). The "mutlicasting" on FM is actually pretty nice since it allows commercially-untenable formats to be broadcast. Here in Detroit, we have 9 stations broadcasting "second IBOC" channels. One (94.7) uses its second IBOC channel to broadcast "deep album rock" from the 1960's and 70's. Another (105.1) broadcasts classical "pops" on its second IBOC channel. Another broadcasts "live rock concerts" on it's second IBOC channel.

The audio quality on the FM IBOC channels is about as good as a 256K MP3. An analogue FM transmission is capable of MUCH better sound quality (although only a few stations such as WFMT in Chicago or WQXR in New York actually broadcast uncompressed FM analogue sound).

The big problem, reception-quality-wise, is that FM IBOC is unreceivable unless you are in a strong, local reception condition. For example, there's an NPR station that broadcasts classical music in Lansing, MI (about 80 miles from me) and I can't pick up their IBOC signal, even with a yagi directional FM antenna. Their analogue signal comes in just fine, and my receiver reverts to analogue since the digital IBOC signal is unreceivable.

As far as AM IBOC goes, Detroit's 950 AM and 910 AM broadcast an IBOC signal. 950's audio quality was HORRIBLE when it first started up, with echoey, swishy, digital artifact sound. Now, Ibiquity seems to have fixed something and 950's signal sounds okay with nice high frequency reproduction. It sounds about as good as a 64K MP3. 910's IBOC signal still sounds awful (although it's in stereo).

AM IBOC though does NOT in any way, shape, or form have "FM quality sound" as Ibiquity's advertising trumpets.

There is an AM stereo station locally (CFCO in Chatham, ON) which indeed DOES have "audio quality approaching FM" when listened to on a good AM stereo receiver (I have an AM stereo tuner in my Ford Escape Hybrid which has the best sound that I've ever heard out of an AM radio).

As far as "IBOC vs DRM" for "high fidelity AM" broadcasts, since IBOC "shares" the allotted bandwidth with an analogue signal, it requires an extremely strong local signal in order to receive it. There is an AM NPR station in Lansing, MI which is UNRECEIVABLE in IBOC mode from 70 miles away, even using a Kiwa Air Core Loop which brings in the analogue AM signal 20 dB over S9. In contrast, since DRM does not share it's bandwidth with an analogue signal, the ability to "DX DRM" is much greater. I can receive DRM test transmissions with perfect

decoding from stations that are inaudible in analogue mode (Deutsche Welle and Radio Nederland quite often "switch over" from analogue to DRM in the midst of a broadcast).

As far as "Eureka DAB" goes, it's deader than a doornail in Canada. The foppish bureaucrats who were trying to "act European and declare their independence from the U.S." by implementing DAB in Canada failed miserably and wasted millions of Canadian tax dollars in the process. Since most Canadian stations (except the CBC) are dependent on U.S. advertising, absolutely NONE of them were about to replace AM and FM with DAB and lose all of the U.S. advertising dollars. I spoke with an engineer at the local CBC station in Windsor, ON and he didn't even KNOW that there was still a DAB transmitter operating in Windsor. The Canadians quietly abandoned their ill-conceived DAB pork-barrel and have allowed XM and Sirius to begin service in Canada.

The above comments are based on empiricle results from my own listening and DX'ing experiences using analogue AM Stereo, IBOC, and DRM receivers.

Yes, this seller is slightly worse than RadioMart(RM). I rarely buy
items on ebay that are new or hot (as in popular) items. The ebay
prices are generally not any better than just buying online, in which
case you have a credit card to protect your purchase.

Ebay is good for "classic" gear, test equipment, stuff like that. Even
then, you can still get burnt, but at least something shows up.

Perhaps the Kiwa is too narrow band to allow the IBOC sidebands to come through.

A bunch of years ago,I used an old raggity fifty foot long electric extension line for an antenna for one of my old Shortwave radios.What I did was connected the two wires (I didn't fool with the ground wire) of the line together with a piece of wire and I draped the line around over piles of my junk in my house,I ran the line from the radio by my couch in my living room and through my dining room and through my kitchen and on down the hall and back through the living to near my front door.It worked pretty good too.

Not to be too off topic but, www.devilfinder.com TripSmarter.com Bulletin Boards New Orleans Street Cars are Back

I was lurking in a New Orleans online chatroom a few afternoons ago.A woman in New Orleans said her toofs are hurting her.I piped up and said,Well,at least you have some toofs.

Perhaps a bit of vernacular that I might have missed, but the program is in
English, at least what I'm hearing here.

S9+10 here as well.

There's zero question it happens. A high position in the FCC is nothing more
than a holding position from which one can trade favors for the right job
offer.

Funny, there are more television sets than people in the USA, yet they are
being abandoned virtually overnight. Or at least the chuckleheads in the
FCC think so. The cable and dish providers, and the public, know better.

I found some experimental licenses near 15937.5, but not close enough
to be what you are hearing. However, it might pay look at them as maybe
your interpretation as to where they are located is not on the money.
It can be a bit confusing, but the FCC often specifies where the peak
energy is located, not where you would tune your radio. For example, in
sideband, there is no energy at the carrier, but the radio is designed
such that you tune to where the carrier would be if you had one.

If you never searched the FCC, go here:
http://svartifoss2.fcc.gov/reports/index.cfm
Use the "frequency" search, and keep it narrow, maybe 1Mhz around where
you think the signal is located. Search both the universal licensing
and the experimental.

Anyone who believes that the best efforts of all mankind could change the climate more than the tiniest amount is an incredibly arrogant fool. Those who believe that our just living here and using the fruits of the Earth are causing major climatic change are much more arrogant and much more foolish. Of course, there are also those who know better, but still insist that mankind is causing major climate change for the purpose of imposing their will on the rest of mankind. They had better hope there is no God.

The feds are going to provide ATSC to NTSC converters free (cough
cough) of cost to the poor.

Cable and dish are a big part of the market. It isn't clear to me if
the feds are going to mandate that HD be delivered over those services.
Even if they feds do mandate HD to subscribers, there is cash flow to
recover the cost of new set top boxes.

My preference would have been for a new broadcast band for terrestrial
digital audio services, rather than a retrofit that causes interference
to conventional users. I don't get too bent out of shape over FM IBOC,
since the capture ratio of the analog receiver will give the fringe
listener a fighting chance at decent reception. However, AM BCB is
another story. You can't reject the IBOC hash in AM.

MAKE MONEY FAST AND EASY HURRY!!!!
Make Money Fast
A little while back, I was browsing these newsgroups, just like you are

now, and came across an article similar to this that said you could
make
thousands of dollars within weeks with only an initial investment of
$6.00!
So I thought," Yeah, right, this must be a scam", but like most of
us, but
I was curious, so I kept reading. Anyway, it said that you send $1.00
to
each of the 6 names and address stated in the article. You then
place your own name and address in the bottom of the list at #6, and
post
the article in at least 200 newsgroups. (There are thousands) No
catch,
that was it. The main difference between this system and others is
that
you have a mailing list of 6 instead of 5... This means that your
average
gain will be app. 15 times higher!!! So after thinking it over, and
talking to a few people first, I thought about trying it. I figured
what
have I got to lose except 6 stamps and $6.00, right? Like most of us
I was
a little skeptical and a little worried about the legal aspects of it
all.
So I checked it out with the U.S. Post Office (1-800-725-2161) and
they
confirmed that it is indeed legal! Then I invested the measly
$6.00.............plus postage
Well GUESS WHAT!!... within 7 days, I started getting money in the
mail!
I was shocked! I still figured it would end soon, and didn't give it
another thought. But the money just kept coming in. In my first week,
I
made about $20.00 to $30.00 dollars. By the end of the second week I
had
made a total of over $1,000.00!!!!!! In the third week I had over
$10,000.00 and it's still growing. This is now my fourth week and I
have
made a total of just over $42,000.00 and it's still coming in
rapidly....... It's certainly worth $6.00, and 6 stamps, I spent more

than that on the lottery!! Let me tell you how this works and most
importantly, why it works.... also, make sure you print a copy of this
article NOW, so you can get the information off of it as you need it.
The
process is very
simple and consists of 3 easy steps:
STEP 1: Get 6 separate pieces of paper and write the following on
each
piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6
US$1.00
bills (or equivalent in your local currency) and place ONE inside
EACH
of the 6 pieces of paper so the bill will not be seen through the
envelope to prevent thievery. Next, place one
paper in each of the 6 envelopes and seal them. You should now have 6
sealed envelopes, each with a piece of paper stating the above
phrase,
your name and address, and a $1.00 bill. What you are doing is
creating
a service by this. THIS IS ABSOLUTELY LEGAL!
Mail the 6 envelopes to the following addresses:

#1 Shely DeShazer
4299 Chrysalis Dr.
Las Vegas,
NV 89121
USA
#2 Julia Burries
5660 Flowes Store rd
Concod NC 28025
USA
#3 Sara Bowen
37 Odonnell Ave
MT Albert,
Auckland,New Zealand
#4 Jedidiah Knopf
12341 S. Solon Rd
Cedar, MI 49621
USA
#5 Rich Grubber
525 penn ave. box #90
Pittsburgh, PA 15222
USA
#6 Joel Price
5875 Davison Rd.
Akron, NY 14001

STEP 2: Now take the #1 name off the list that you see above, move
the
other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name
as

number 6 on the list. (Use your 'delete" key to remove name #1 and
move
all other names up. Then change numbers and add your name as #6)
STEP 3: Change anything you need to, but try to keep this article as
close to original as possible. Now, post your amended article to at
least 200 newsgroups. (I think there is close to 24,000 groups) All
you
need is 200, but remember, the more you post, the more money you
make!
Don't know HOW to post in the newsgroups? Well do exactly the
following:

DIRECTIONS - HOW TO POST TO NEWSGROUPS

Step 1. You do not need to re-type this entire letter to do your
own posting. Simply put your cursor at the beginning of this
letter and click and hold down your mouse button. While
continuing to hold down the mouse button, drag your cursor to the
bottom of this document and over to just after the last
character, and release the mouse button. At this point the entire
letter should be highlighted. Then, from the 'edit' pull down
menu at the top of your screen select 'copy'. This will copy
the entire letter into the computers memory.
Step 2. Open a blank 'notepad' file and place your cursor at the
top of the blank page. From the 'edit' pull down menu select
'paste'. This will paste a copy of the letter into notepad so
that you can add your name to the list. Remember to eliminate the
#1 position, move everyone up a spot (re-number everyone else's
positions), and add yourself in as #6.
Step 3. Save your new notepad file as a .txt file. If you want
to do your postings in different sittings, you'll always have
this file to go back to.

INTERNET EXPLORER USERS:

Step 4. Go to newsgroups and select 'Post an Article'.
Step 5. Fill in the subject.
Step 6. Same as #6 above
Step 7. Hit the 'Post' button.

THAT'S IT! All you have to do is jump to different newsgroups and
post
away, after you get the hang of it, it will take about 30 seconds for
each newsgroup!
**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU
WILL MAKE!!
BUT YOU HAVE TO POST A MINIMUM OF 200**
That's it! You will begin receiving money from around the world
within
day's! You may eventually want to rent a P.O. Box due to the large

amount
of mail you receive. If you wish to stay anonymous, you can invent a
name
to use, as long as the postman will deliver it. **JUST MAKE SURE ALL
THE
ADDRESSES ARE CORRECT.**
Now the WHY part:
Out of 200 postings, say I receive only 5 replies (a very low
example). So
then I made $5.00 with my name at #6 on the letter. Now, each of the
5
persons who just sent me $1.00 make the MINIMUM 200 postings, each
with my
name at #5 and only 5 persons respond to each of the original 5,that
is
another $25.00 for me, now those 25 each make 200 MINIMUM posts with
my
name at #4 and only 5 replies each, I will bring in an

additional $125.00! Now, those 125 persons turn around and post the
MINIMUM
200 with my name at #3 and only receive 5 replies each, I will make
an
additional $626.00! OK, now here is the fun part, each of those 625
persons
post a MINIMUM 200 letters with my name at #2 and they each only
receive 5
replies, that just made me $3,125.00!!! Those 3,125 persons will all
deliver this message to 200 newsgroups with my name at
#1 and if still 5 persons per 200 newsgroups react I will receive
$15,625,00! With a original investment of only $6.00! AMAZING! And as
I
said 5 responses is actually VERY LOW! Average is probable 20 to 30!
So
lets put those figures at just 15 responses per person. Here is what
you
will make:
at #6 $15.00
at #5 $225.00
at #4 $3,375.00
at #3 $50,625.00
at #2 $759,375.00
at #1 $11,390,625.00
When your name is no longer on the list, you just take the latest
posting
in the newsgroups, and send out another $6.00 to names on the list,
putting
your name at number 6 again. And start posting again. The thing to
remember
is, do you realize that thousands of people all over the world are

joining
the internet and reading these articles everyday, JUST LIKE YOU are
now!!
So can you afford $6.00 and see if it really works?? I think so...
People
have said, "what if the plan is played out and no one sends you the
money?
So what! What are the chances of that happening when there are tons
of new
honest users and new honest people who are joining the internet and
newsgroups everyday and are willing to give it a try? Estimates are
at
20,000 to 50,000 new users, everyday, with thousands of those joining
the
actual internet. Remember, play FAIRLY and HONESTLY and this will
work. You
just have to be honest. Make sure you print this article out RIGHT
NOW,
also. Try to keep a list of everyone that sends you money and always
keep
an eye on the newsgroups to make sure everyone is playing fairly.
Remember,
HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to
make
the money!! GOOD LUCK to all and please play fairly and reap the huge
rewards from this, which is tons of extra CASH.
TRUST ME IT DOES WORK!

I think the same thing was said before many lakes and rivers became
polluted. "It is a really big lake...."

Does anybody really know how much man-made pollution the environment can
tolerate before it becomes a problem?

Do you know how to get something entered into the congressional record.
One way is to have some loser politician read it out loud on the floor.
Oh, and the floor can be empty.

Navrozov has fans. Big deal. I'm sure Castro has his fans, but that
doesn't mean he tells the truth all the time either.

The US still blasts Radio Marti at Cuba. Do you think Cuba thinks of it
as QRM? One man's propaganda signal is another man's QRM.

Source record: 56738

Fred E - N8UC wrote:

"The audio quality on the FM IBOC channels is about as good as a 256K MP3. An analogue FM transmission is capable of MUCH better sound quality (although only a few stations such as WFMT in Chicago or WQXR in New York actually broadcast uncompressed FM analogue sound)."

Here we have to be careful about the term 'compression', especially in tems of audio quality and digital audio through-put. 'Compression' in the analog audio sense defines the process of 'squashing' an audio signal - reducing its dynamic range - in an effort to make it of a more consistent level. This is felt to be important by most radio broadcasters for competitive reasons; the 'louder' stations are felt to have more 'dial presence' and therefore are more able to capture listeners scanning the dial. It is true that some high-powered classical music stations employ very little compression, and yet analog FM is always hampered by the 75 us audio pre-emphasis and the 10% injection of the stereo sub-channel (which requires a hefty received signal to get anywhere near a 60db S/N ratio - a pretty poor showing).

'Compression' as it relates to digital radio refers to the ammount of (audio) data that is 'thrown away' due to the need to fit the signal into the available bandwidth. The ubiquitous "MP3" at 128 kbps has "thrown away" about 90% (ninety percent) of the material that was found on the origianl (uncompressed) Compact Disc. The 'computer' programs that perform this task are running a 'compression algorithim', and much work is and has been done in this field. It is the basis of *ALL* of the current crop of consumer / portable / personal music devices (Ipod / cell-phone audio / Internet Radio etc).

To illustrate: Fred E quantifies his IBOC FM experience as beig similar to a 256 kbps MP3. In reality, FM IBOC stations are limited to a total data through-put of 98 kbps, 2 kbps of which are reserved for overhead and data. Hence, Fred E was listening to a 96 kbps signal. Quite remarkable, really especially in a direct A-B comparisson between most (uncompressed) source material and the recovered IBOC signal.

AM IBOC is limited to a bit rate of only 32 kbps (!) - about 95% of the original data has been tossed overboard, and yet... Fred E and I will have to disagree on the aural result, which has a lot to do with the care the radio station has taken in their audio and RF infrastructure (IBOC *mandates* a very flat antenna system, something most AM stations have not historically had to consider. Hence, ones aural experiences, especially in these young days of AM IBOC may vary). I too am a vetran of C-Quam AM stereo, and IMHO IBOC has a much lower noise floor and much better stereo separation.

Lastly, the "specifications" page of Fred E's Yamaha receiver (nice unit!) :

http://www.yamaha.com/yec/products/receivers/RXV4600_specs.htm

completely ignores the AM section. Hummm... could this be the trouble with your AM IBOC reception...?

Do you have facts to discredit Lev Navrozov, and the credentials to back it up, or is that your worthless poisoned and hallucinating Left-wing-Liberal-"Progressive"-Socialist-Kommunist propagandic lies and distortions?

Clifto,

I don't want to start a religious debate here, be arrogant or impose my
will on anybody, but let me run a couple
of things by you and get your views...

FACT: Carbon Dioxide *is* a "greenhouse gas" (i.e., it lets solar energy
into the biosphere but does not let it out).

FACT: Ice core samples show that Carbon Dioxide *is* the *highest* its
been in *400,000 years*.

FACT: Mankind has been exponentially adding Carbon Dioxide to the
atmosphere since the Industrial Revolution began. (~200 years)

Now, one fairly obvious (although not necessarily correct) conclusion
could be that the current highest amount in 400,000 years *was* caused
by man.

I know that volcanic activity can add to the CO2 burden, but have we had
more volcanic activity in the last 200 years compared to the previous
400,000 years? I don't believe so.

If you don't think mankind has anything to do with the highest CO2 in
400,000 years, I will respect that opinion, but would appreciate your
thoughts on where else you think that this record amount of CO2 might
have come from...

Is it any wonder why "Dr." DaviD haven't singled out the single country spewing out the greatest amount of greenhouse gases per GDP (not to even mention the most carcinogenic and environmental pollution in all of history) - Kommunist China?

His silence towards Kommunist China shouldn't surprise you. They pay Useful Idiots like "Dr" DaviD to post this garbage.

Buddies one of the best New Years yet!
I don't care if you don't like me or never did. I want to start this New Years off right. With understanding, love, consideration, dignity and all that goes along with.

Especially good health both physically and mentally. Let enemies becomes friends, and friends become more cherished. This change in time gives us ALL the opportunity to become different people to ourselves and others.

I hope some people in here take heed to this post and make themselves even better people including myself.

Happy New Year and Good Luck to all my fellow human being!

A warm greeting and new beginning!

Lucky

What ever you say its still a web of links. We get lots of happy
traffic worldwide from The USA UK Europe Canada and of course Australia

And it couldnt happen without you

Thank you.

I get a lot of email about how sites can ad easily to

Matilda (Hey weve been waltzing the web since 1994)

at

http://www.matildasearch.com

and

Aussieseek.

http://www.aussieseek.com

For Paid and Free Listings its best to go to the Homepage of
AussieSeek.

Theres a free Hotlist there (Primitive I know but it works) which we
include but of course priority listings are given to the paid inclusion

in the database

The Database is also used on these country specific pages

http://www.radiotalkback.net
http://www.lookaboutusa.com
http://www.britishseek.com
http://www.canadawebseek.com
http://www.webfindafrica.com
http://www.matildasearch.com
http://www.aussieseek.com.au
http://www.japanwebfind.com
http://www.chinanetseek.com
http://www.indiawebseek.com
http://www.stormpages.com/lookabout/newzseek.html

Hope that helps

Keith
